NF

Nile Fusion Trading Group

General Ledger graduation project in Oracle Fusion Cloud

55 topics · 5 team members · 1 week, done in a live Fusion instance

Project roadmap: 5 days × 11 topics

1

Foundation (Topics 1–11)

User, ledger building blocks, chart of accounts, primary ledger, ledger options and legal entities

2

Access, Periods and Core Journals (Topics 12–22)

Balancing segments, submit, roles, data access, first period, rapid implementation and the first journal

3

Controls, Posting and Reversal (Topics 23–33)

Copy, delete, reverse, trial balance, automation, sequences, spreadsheet journals, suspense, CVR and budget role

4

Budgets (Topics 34–44)

Users, business unit, budgetary control, control budget, budget entry, review, increase, transfer and rate types

5

Foreign Currency, Intercompany and Close (Topics 45–55)

Daily rates, FX journal, revaluation, inquiry, translation, intercompany and period close

Configuration at a glance

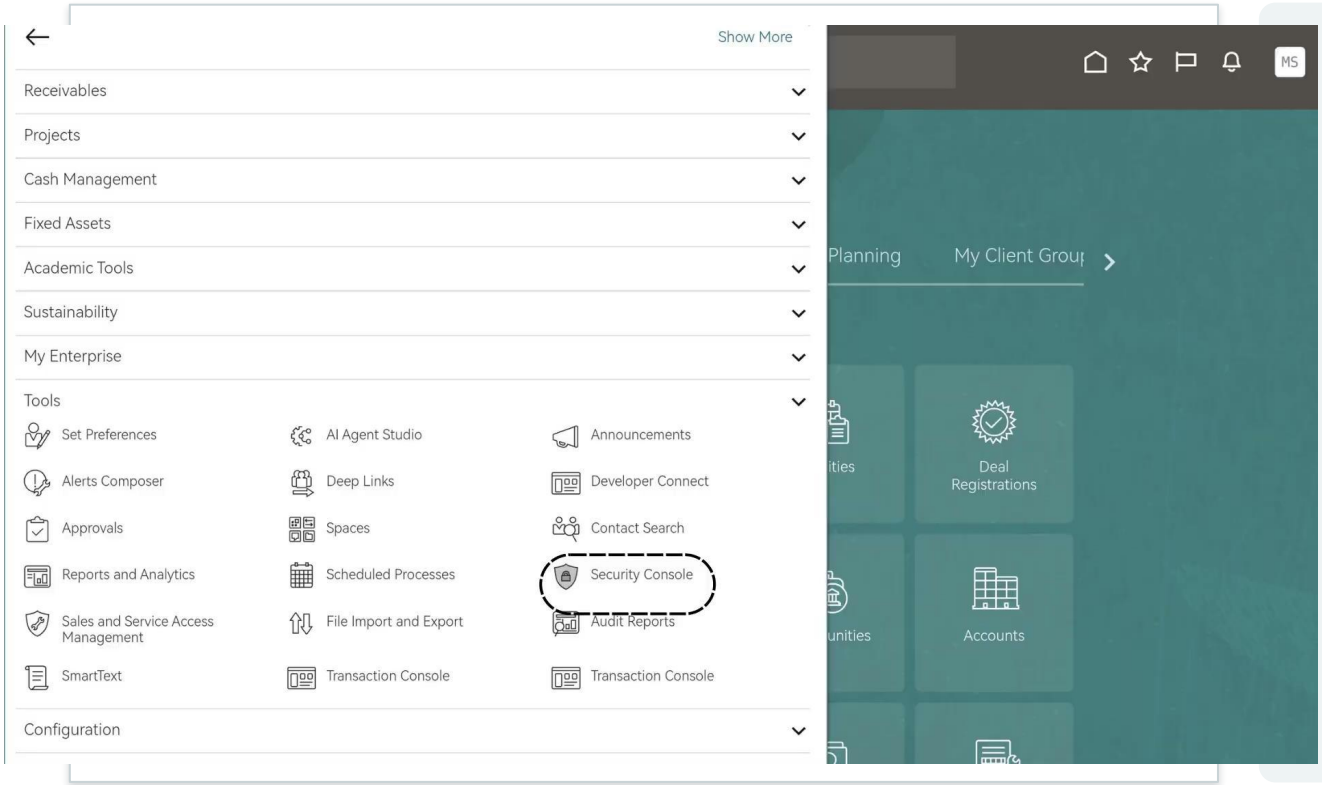

Object	Value we used
Business	Electronics import & distribution · Cairo HQ (01) · Riyadh branch (02) for the Gulf
User	NF.GL.USER (General Accounting Manager + Budget Manager)
Calendar	NF_Calendar: monthly, MMM-YY, from Jan-2025
Chart of accounts	NF_COA_INSTANCE: Company (2) - Department (4) - Account (5)
Ledger	NF Primary Ledger: EGP, Standard Accrual, first period Jan-26
Legal entities	01 Nile Fusion Egypt · 02 Nile Fusion KSA
Controls	CVR NF_CVR_INV_SALES · Suspense 01-0000-99999 · Sequence NF GL POSTING SEQ
Intercompany	01 ↔ 02 using 13013 Intercompany Receivable / 21021 Intercompany Payable
Journals	NF Category · NF Source · NF AutoPost · NF Auto Reversal
Budgets	NF Control Budget 2026 (Company + Account, Advisory) · NF Egypt Electronics BU
Currencies	NF Rate · USD revaluation (60061/60062) · NF USD Translation · NF SAR Reporting

0

Rapid Implementations

Implement Nile Fusion General ledger

Rapid Implementation

WHAT WE DID

Rapid Implementation for Nile Fusion Company in Egypt

WHY IT MATTERS

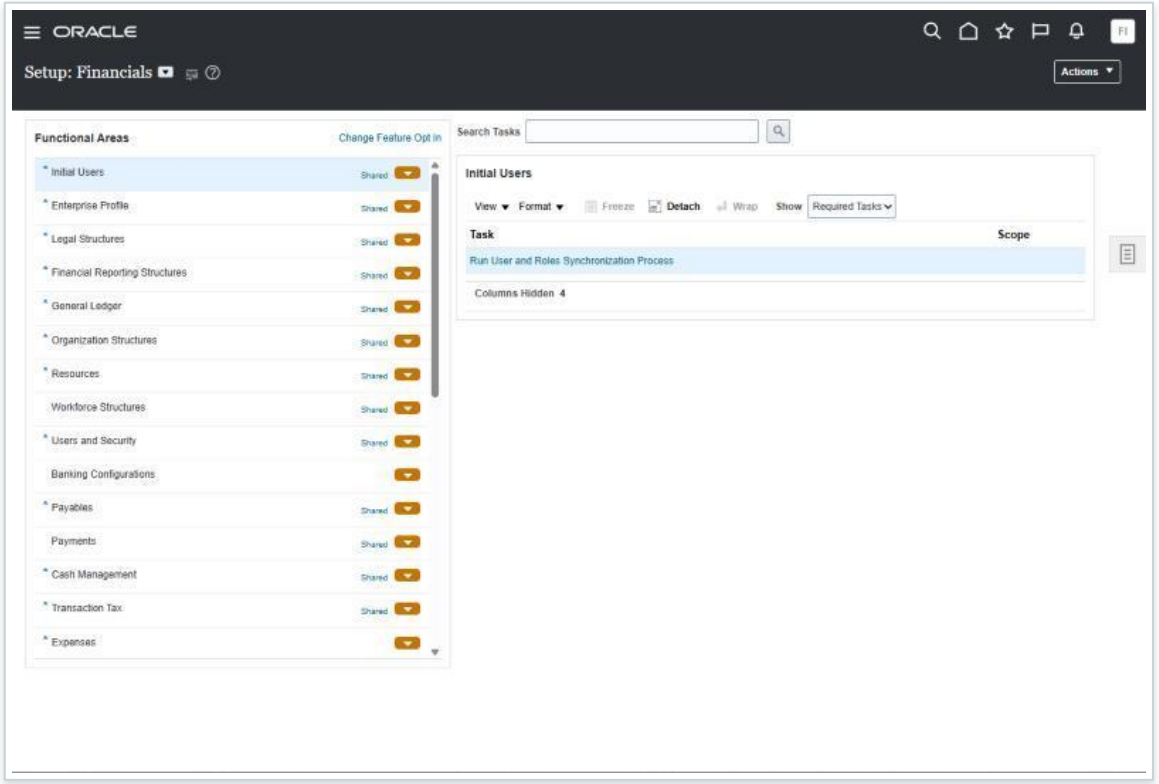

Start Using Oracle Fusion

1

Foundation (Topics 1–11)

User, ledger building blocks, chart of accounts, primary ledger, ledger options and legal entities

Setup and Maintenance: the Financials offering

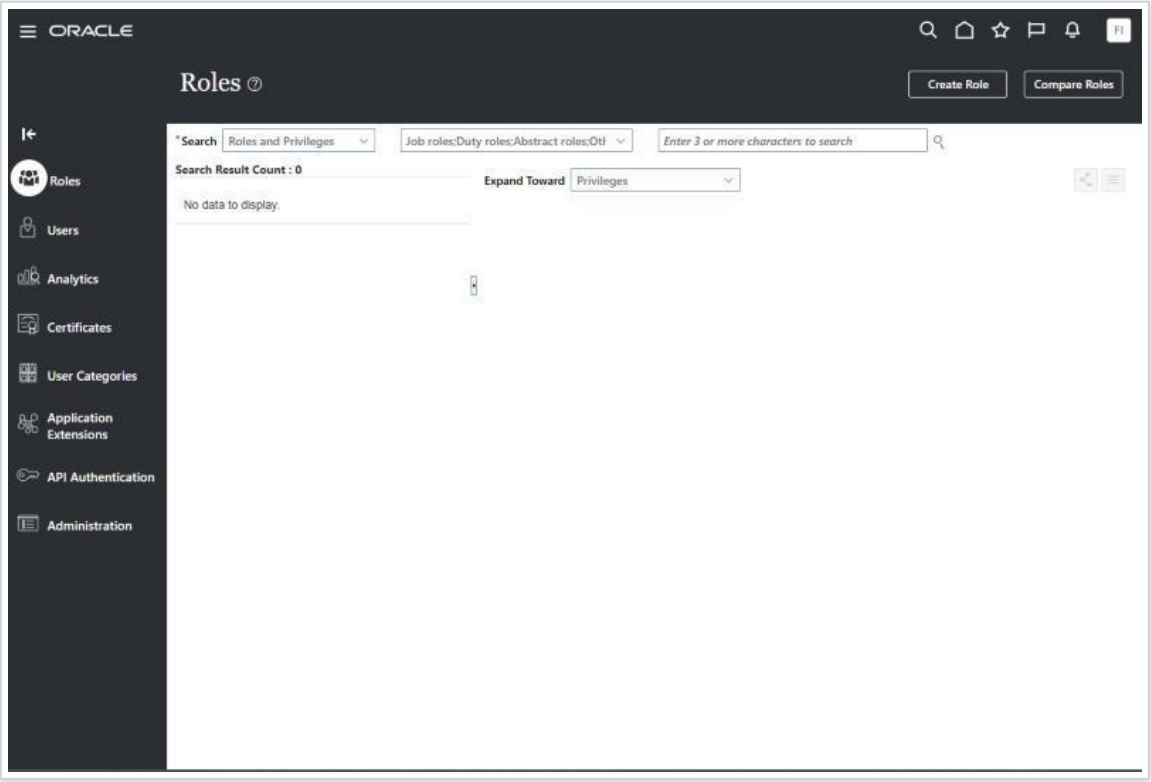

WHAT WE DID

All configuration is done from Setup and Maintenance > Setup: Financials, where functional areas group the tasks.

WHY IT MATTERS

Working inside the Financials offering keeps the setup in the order Oracle expects and gives a single place to search tasks.

1. Create user: Security Console

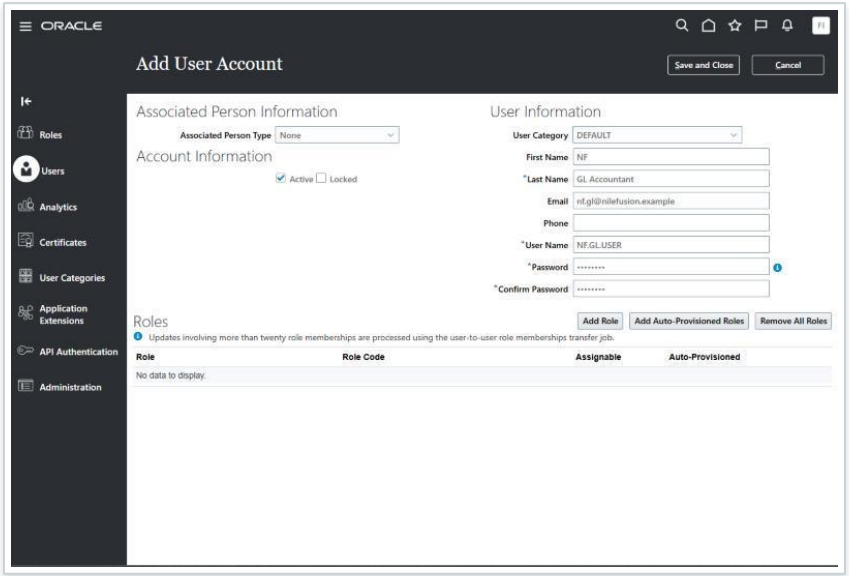

WHAT WE DID

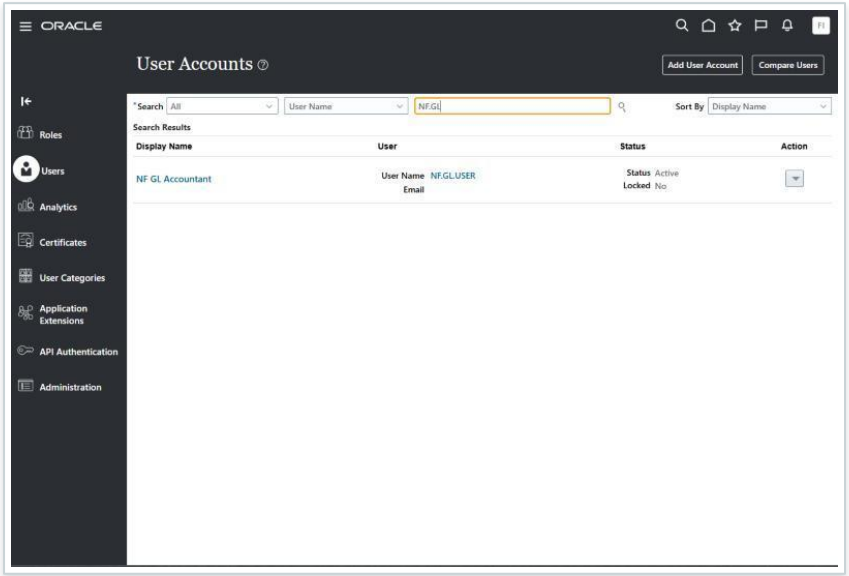

Opened Tools > Security Console > Users and clicked Add User Account.

WHY IT MATTERS

The GL accountant needs their own login before any role or data access can be granted.

1. Create user: NF.GL.USER

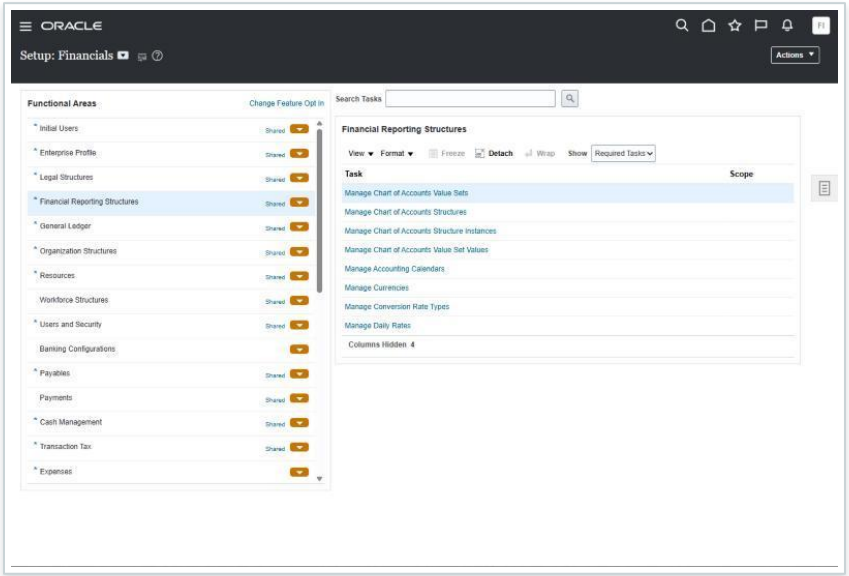

WHAT WE DID

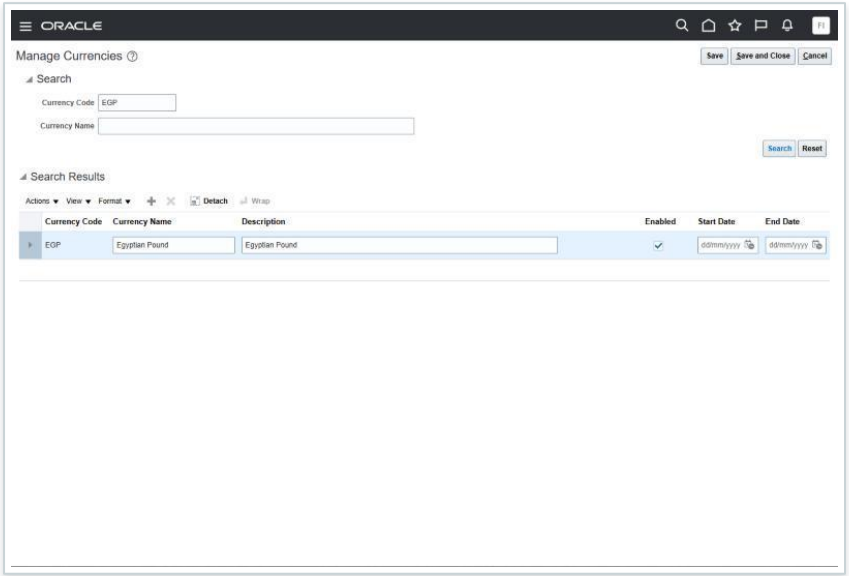

Created user NF.GL.USER (NF GL Accountant) with a password, then saved and closed.

WHY IT MATTERS

A named user gives a clean audit trail: every journal shows who created and posted it.

2. Ledger building blocks: currency

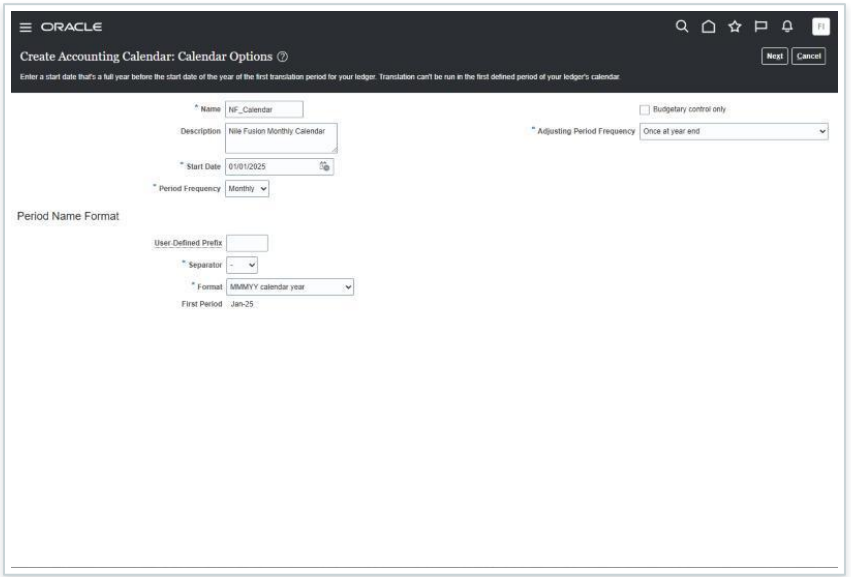

WHAT WE DID

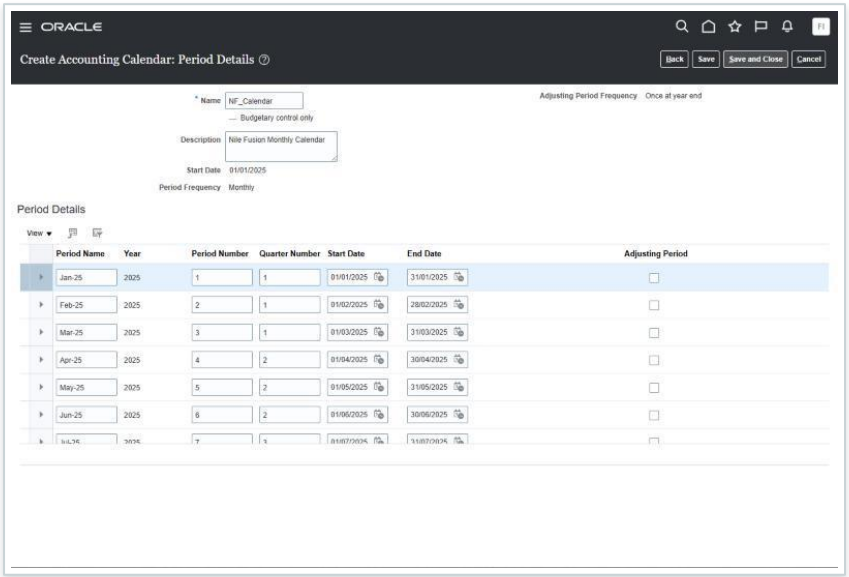

Financial Reporting Structures > Manage Currencies: checked that EGP, SAR and USD are enabled.

WHY IT MATTERS

EGP is the ledger currency for the Cairo HQ. USD (suppliers of phones and laptops) and SAR (Riyadh branch) are needed for foreign transactions and translation.

2. Ledger building blocks: calendar NF_Calendar

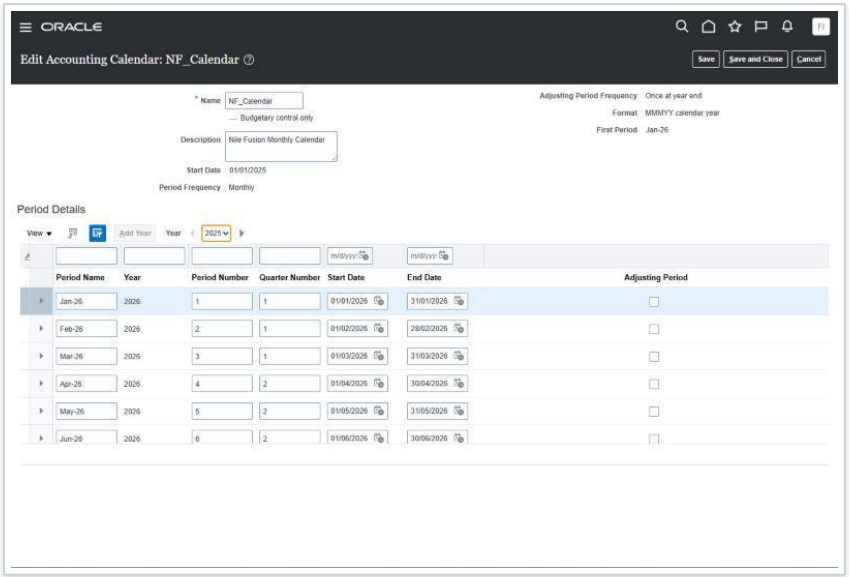

WHAT WE DID

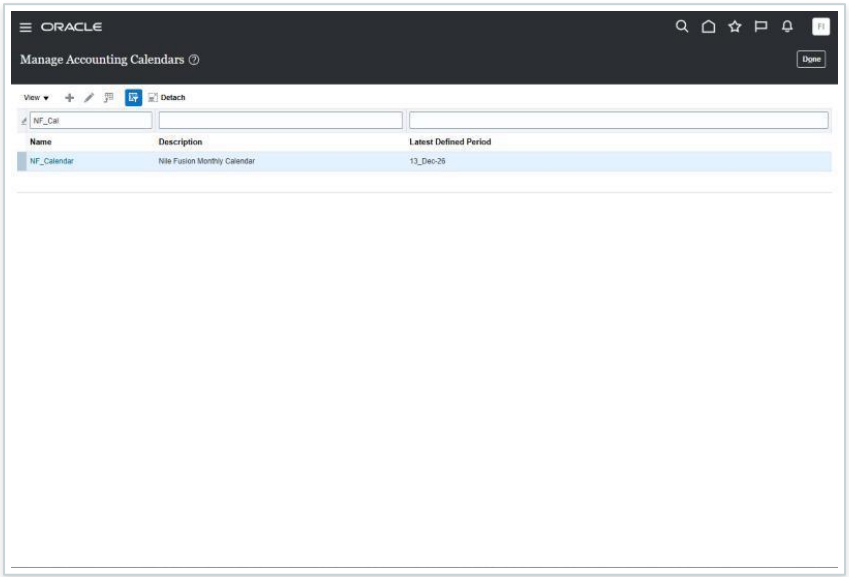

Created NF_Calendar: monthly, start 01/01/2025, separator "-", format MMM-YY, with one adjusting period at year end.

WHY IT MATTERS

The calendar defines the periods that journals are posted into and that are opened and closed.

2. Calendar: 2026 added and saved

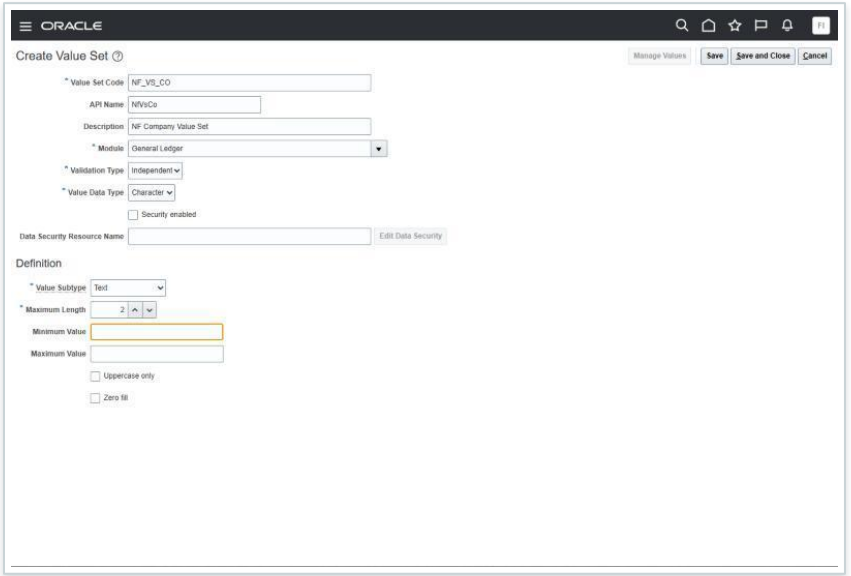

WHAT WE DID

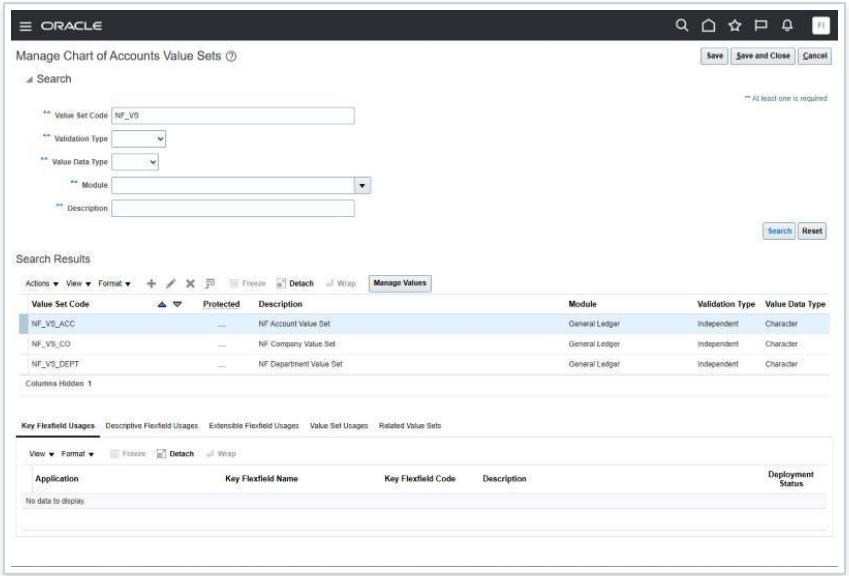

Added the 2026 year (Jan-26 to Dec-26, plus adjusting period 13-26) and saved.

WHY IT MATTERS

Jan-26 is the first period we open and post into.

3. Value sets for the three segments

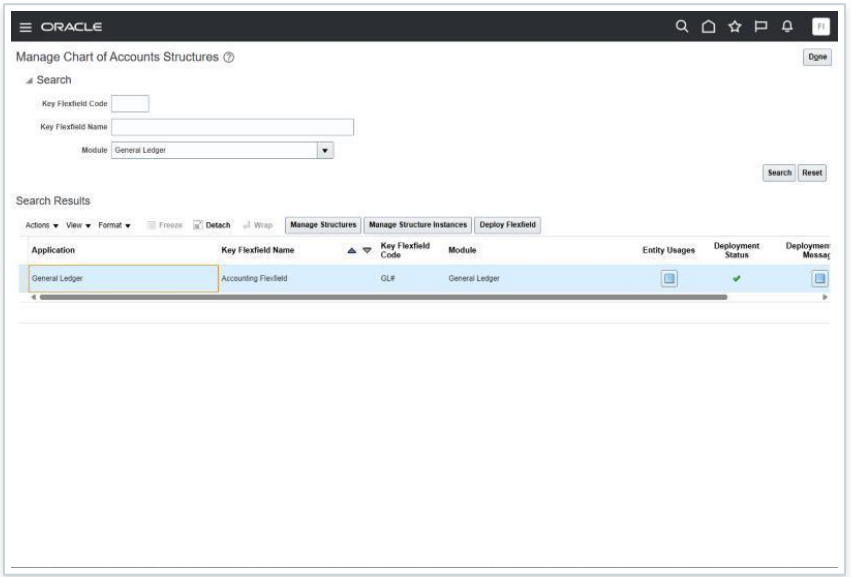

WHAT WE DID

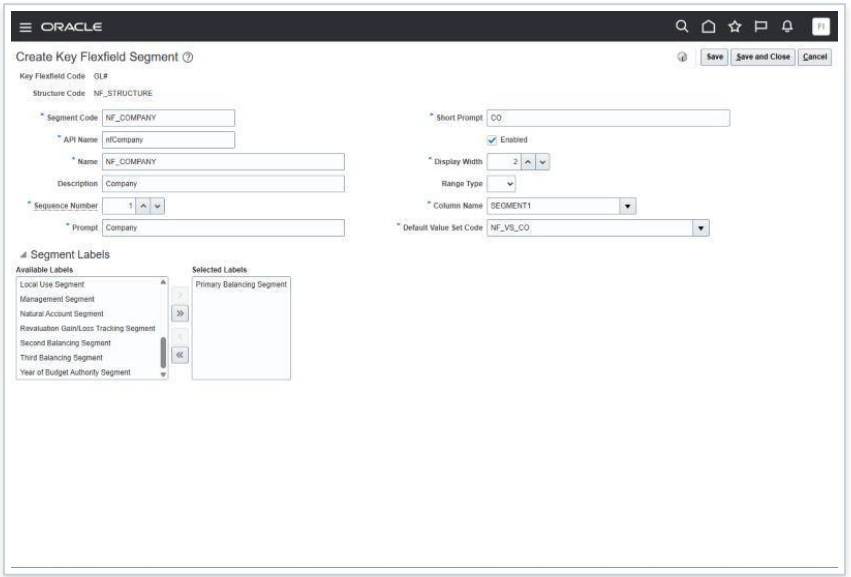

Created NF_VS_CO (2 chars), NF_VS_DEPT (4) and NF_VS_ACC (5). Module General Ledger, validation Independent, format Character/Text.

WHY IT MATTERS

A value set defines which values a segment accepts and how long they can be.

4. Chart of accounts structure

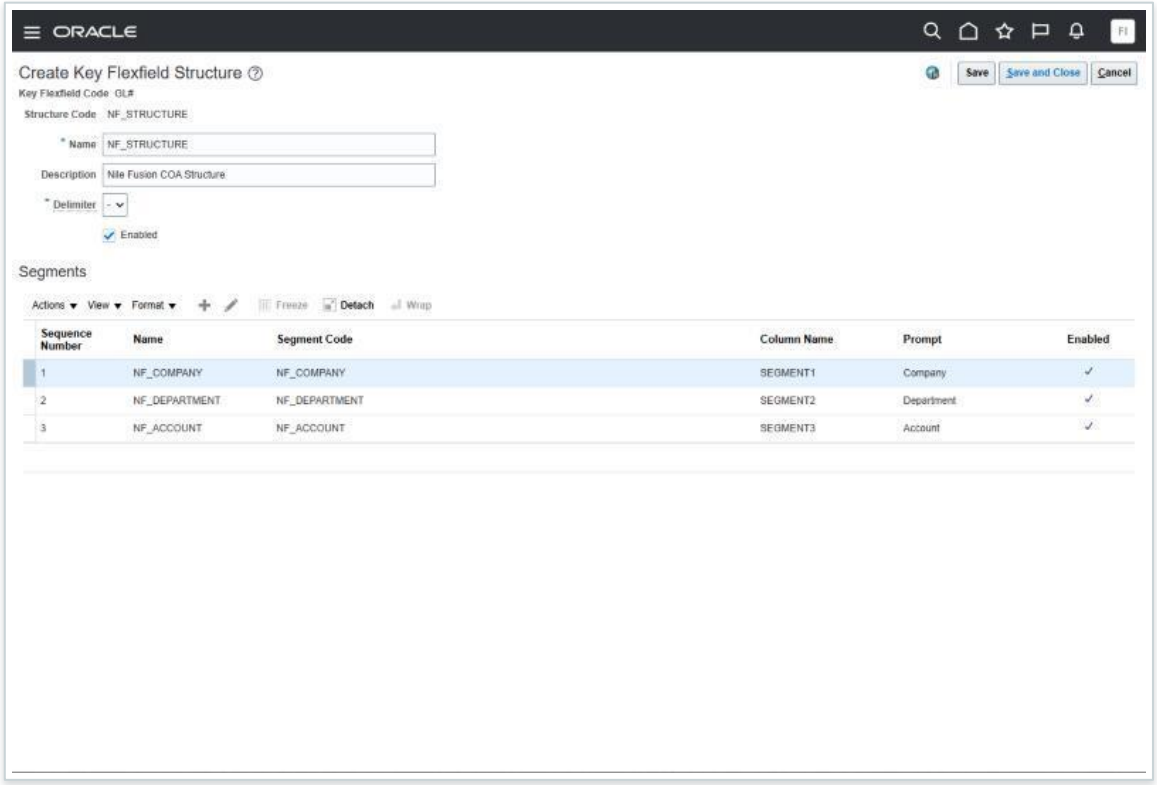

WHAT WE DID

Manage Chart of Accounts Structures (key flexfield GL#): created NF_STRUCTURE with delimiter "-".

WHY IT MATTERS

The structure fixes the order and labels of segments, so every account reads Company-Department-Account.

4. Segments and their labels

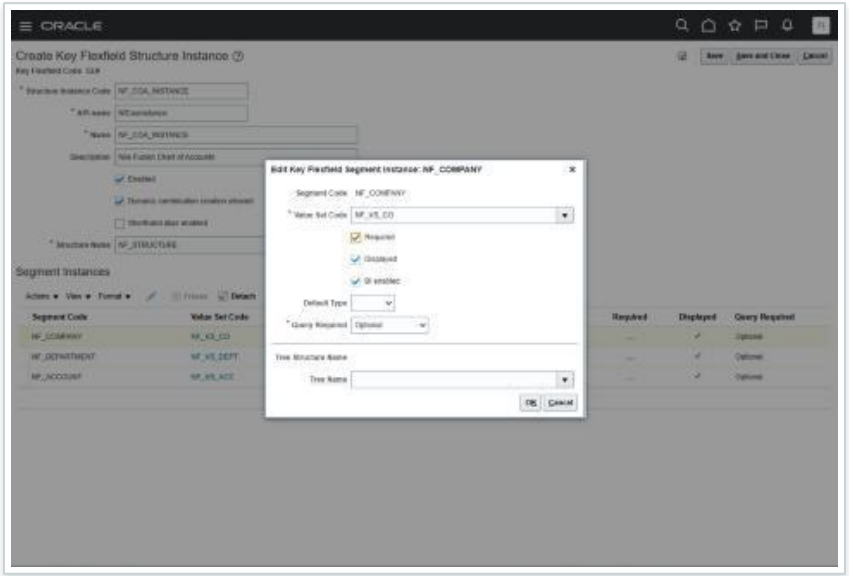

WHAT WE DID

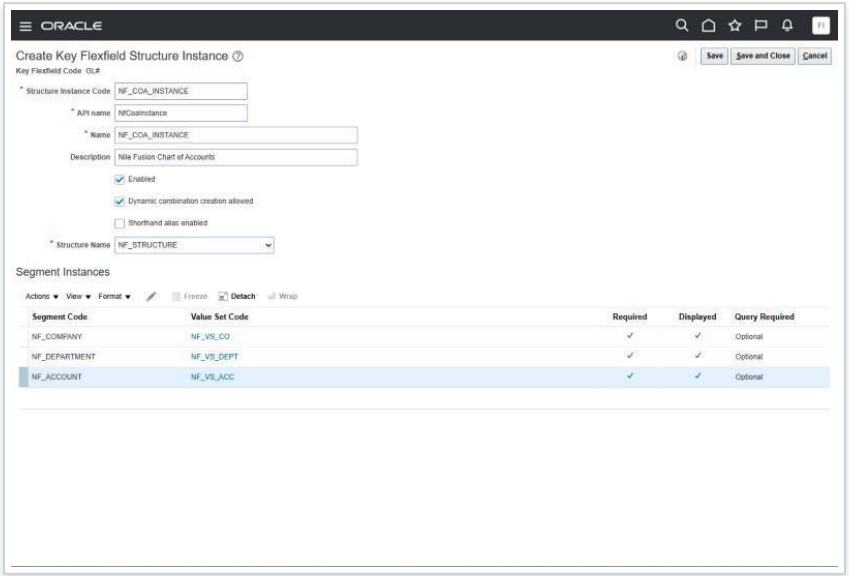

NF_COMPANY = Primary Balancing Segment, NF_DEPARTMENT = Cost Center Segment, NF_ACCOUNT = Natural Account Segment.

WHY IT MATTERS

Segment labels tell Fusion which segment balances by company, which tracks departments, and which drives account type and retained earnings.

5. Structure instance

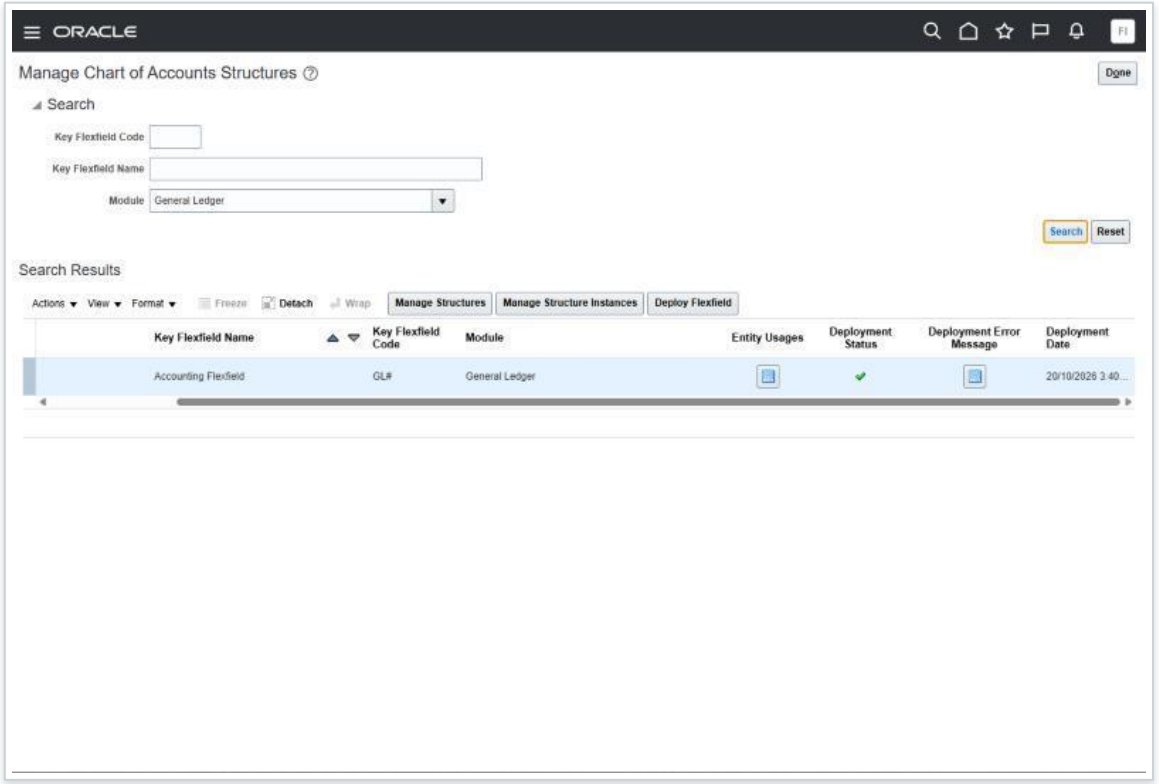

WHAT WE DID

Created NF_COA_INSTANCE on NF_STRUCTURE. All segments are required and displayed, and dynamic combination creation is allowed.

WHY IT MATTERS

The instance is what the ledger uses. One structure can have several instances with different value sets.

5. Deploy the flexfield

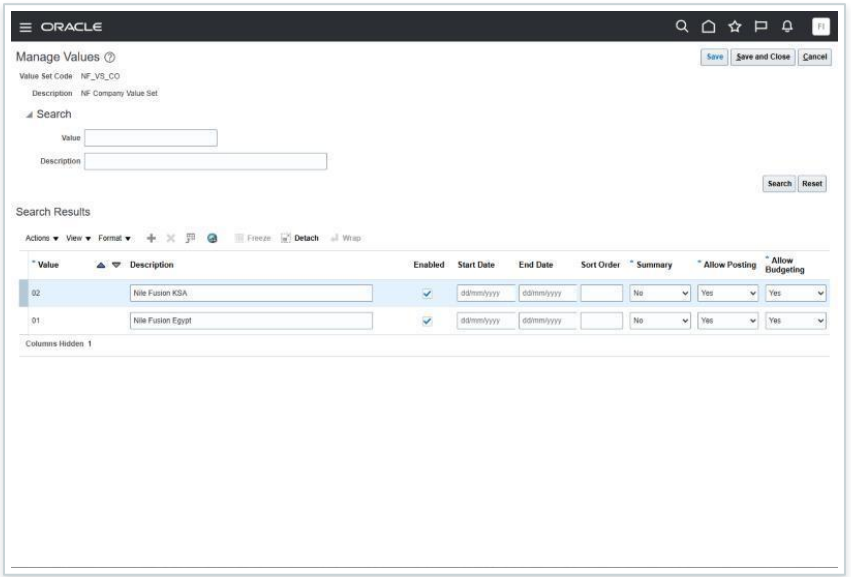

WHAT WE DID

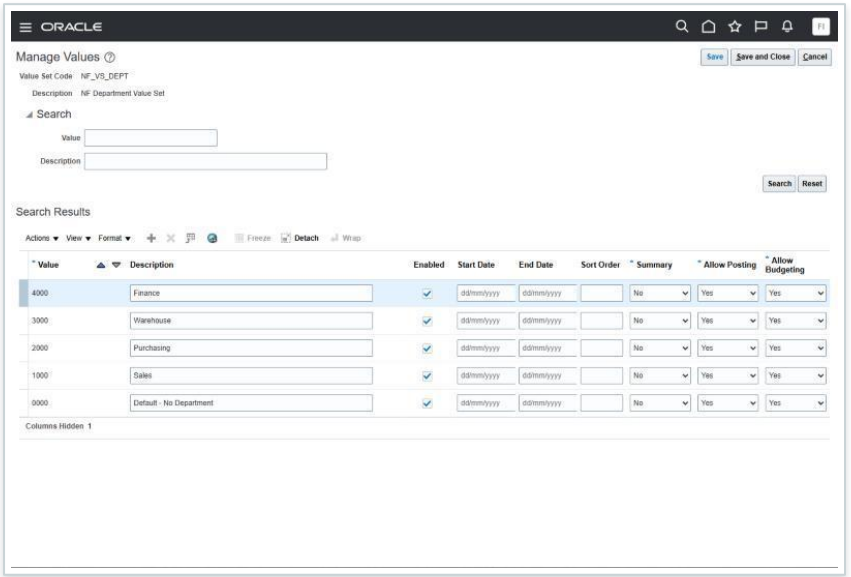

Deployed the GL# accounting flexfield. The status shows a green check.

WHY IT MATTERS

Changes to the chart of accounts only reach journal screens after deployment.

6. Value set values: company and department

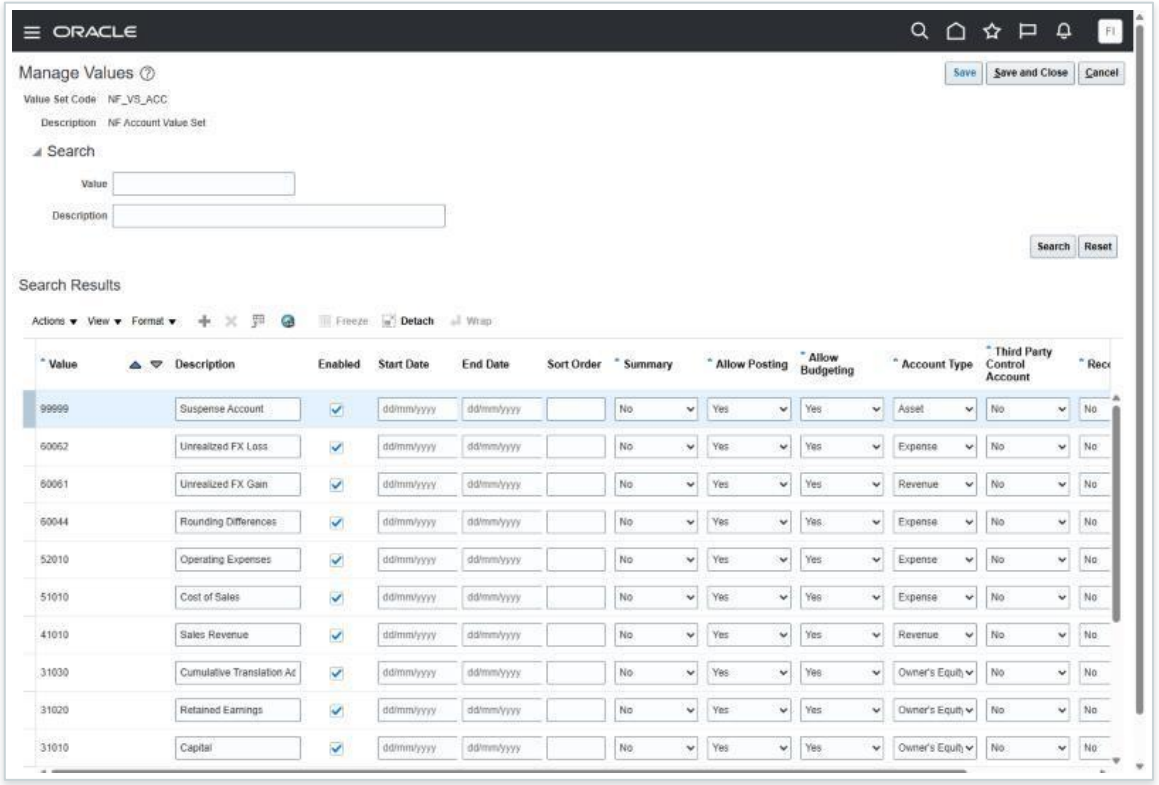

WHAT WE DID

Company: 01 Nile Fusion Egypt (Cairo HQ), 02 Nile Fusion KSA (Riyadh branch). Department: 0000 Default, 1000 Sales, 2000 Purchasing, 3000 Warehouse, 4000 Finance.

WHY IT MATTERS

These values make up the account combinations used in every journal.

6. Value set values: natural accounts

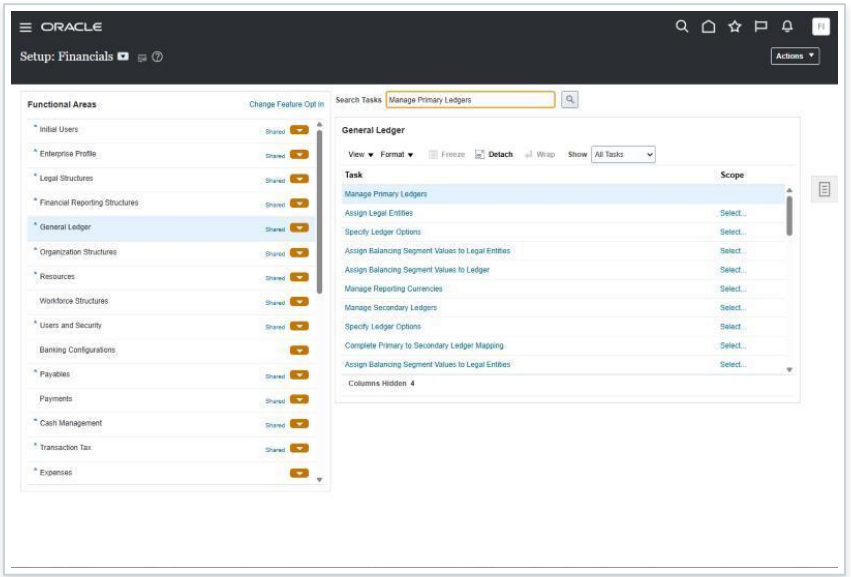

WHAT WE DID

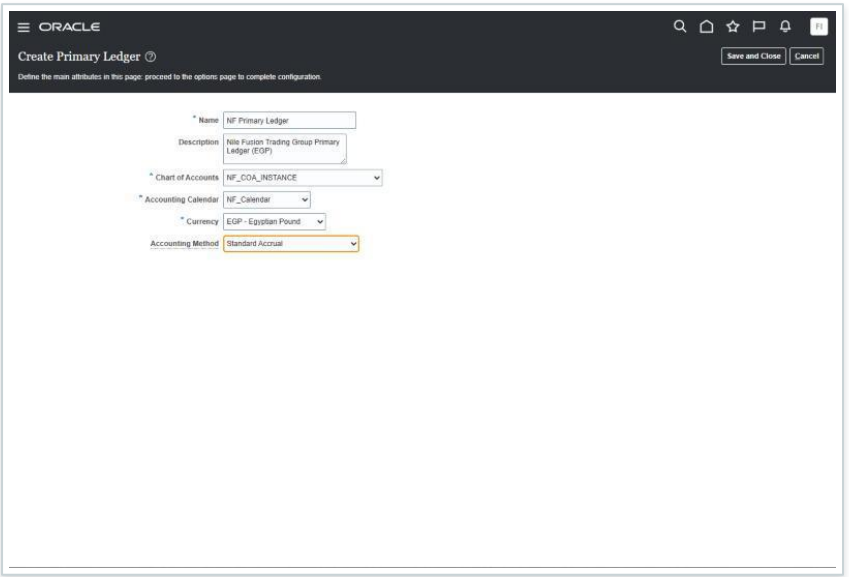

16 natural accounts, each with an account type: cash, bank, inventory (devices), intercompany AR/AP, payables, capital, retained earnings, CTA, sales, cost of sales, opex, rounding, FX gain/loss, suspense.

WHY IT MATTERS

The account type (Asset, Liability, Owner's Equity, Revenue, Expense) drives the balance sheet vs P&L and year-end close.

7. Manage Primary Ledger (accounting basis)

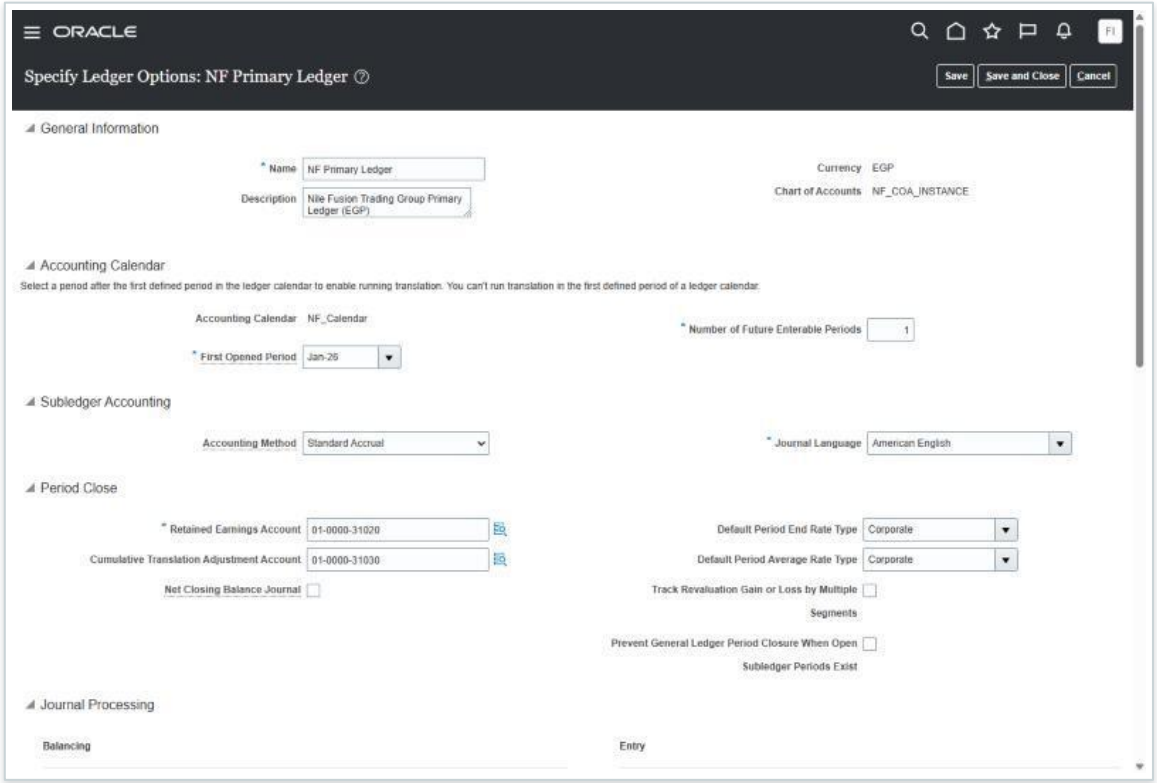

WHAT WE DID

General Ledger > Manage Primary Ledgers: created NF Primary Ledger with NF_COA_INSTANCE, NF_Calendar and EGP. Accounting method: Standard Accrual.

WHY IT MATTERS

The ledger joins the 4 Cs: chart of accounts, calendar, currency and accounting convention (accrual basis).

8. Specify ledger options

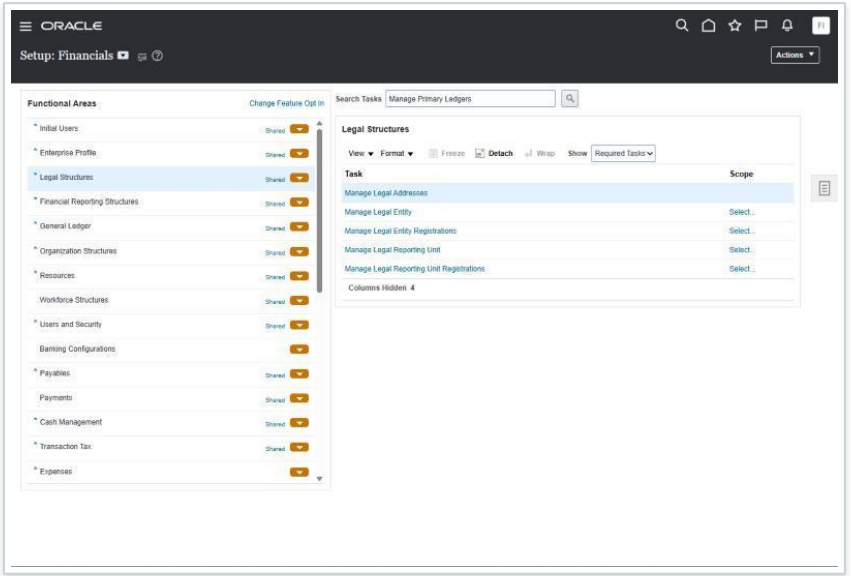

WHAT WE DID

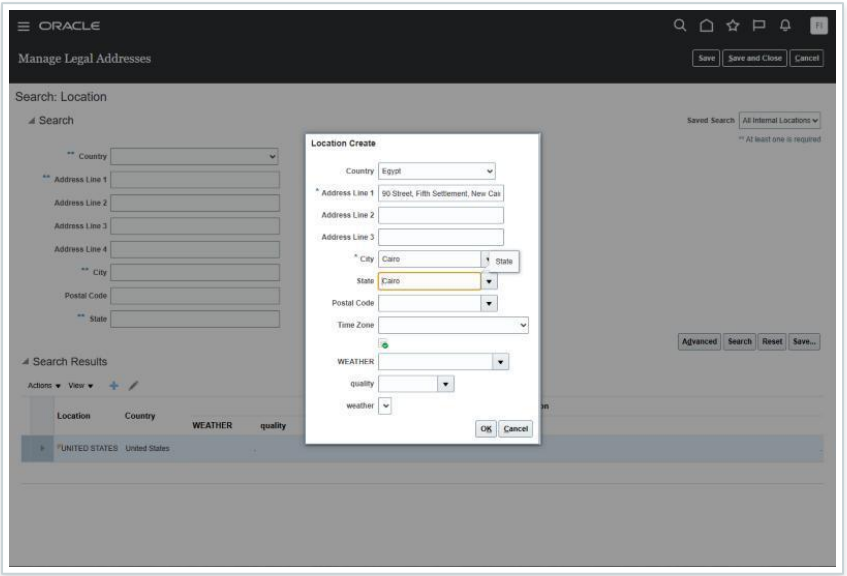

Set first opened period Jan-26, retained earnings 01-0000-31020, Corporate period-end and average rate types, suspense posting and intercompany accounting.

WHY IT MATTERS

Ledger options control how the ledger behaves: where retained earnings close, which rates translate balances, and whether unbalanced journals go to suspense.

9. Legal addresses

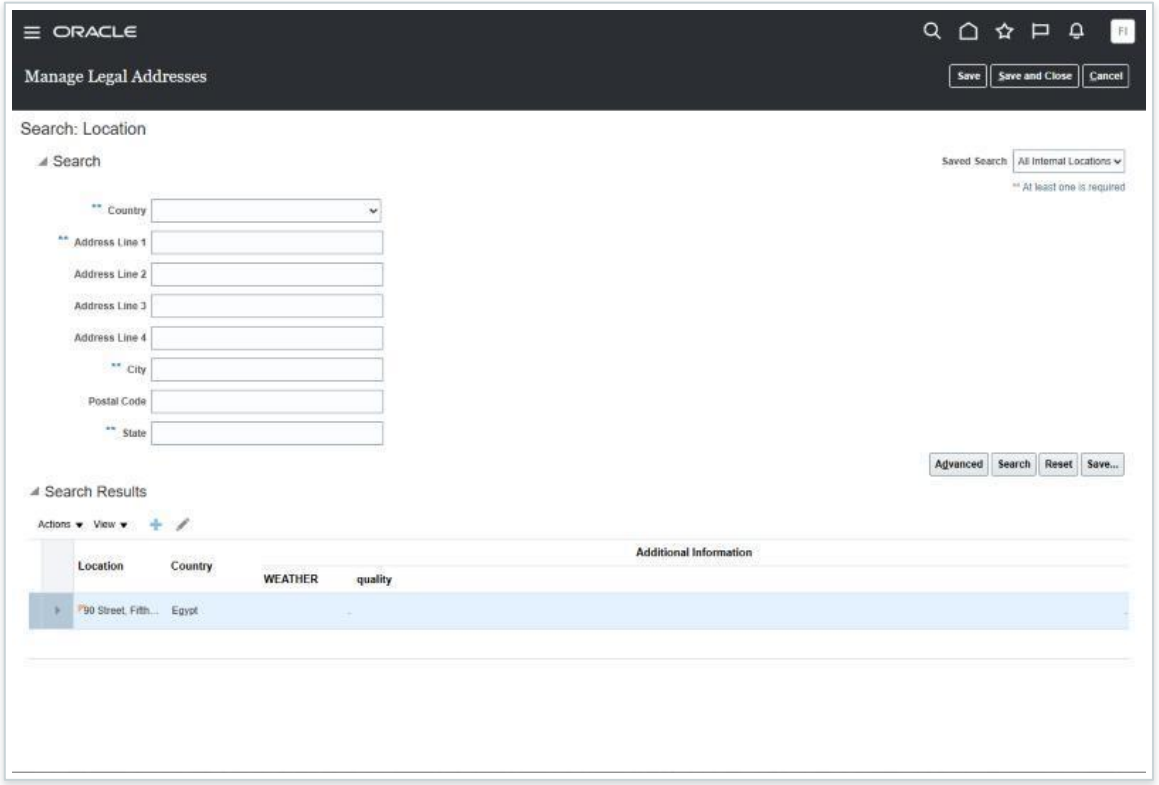

WHAT WE DID

Legal Structures > Manage Legal Addresses: created addresses in New Cairo (Egypt) and Olaya, Riyadh (Saudi Arabia).

WHY IT MATTERS

Every legal entity needs a registered address. It is used on tax and statutory reports.

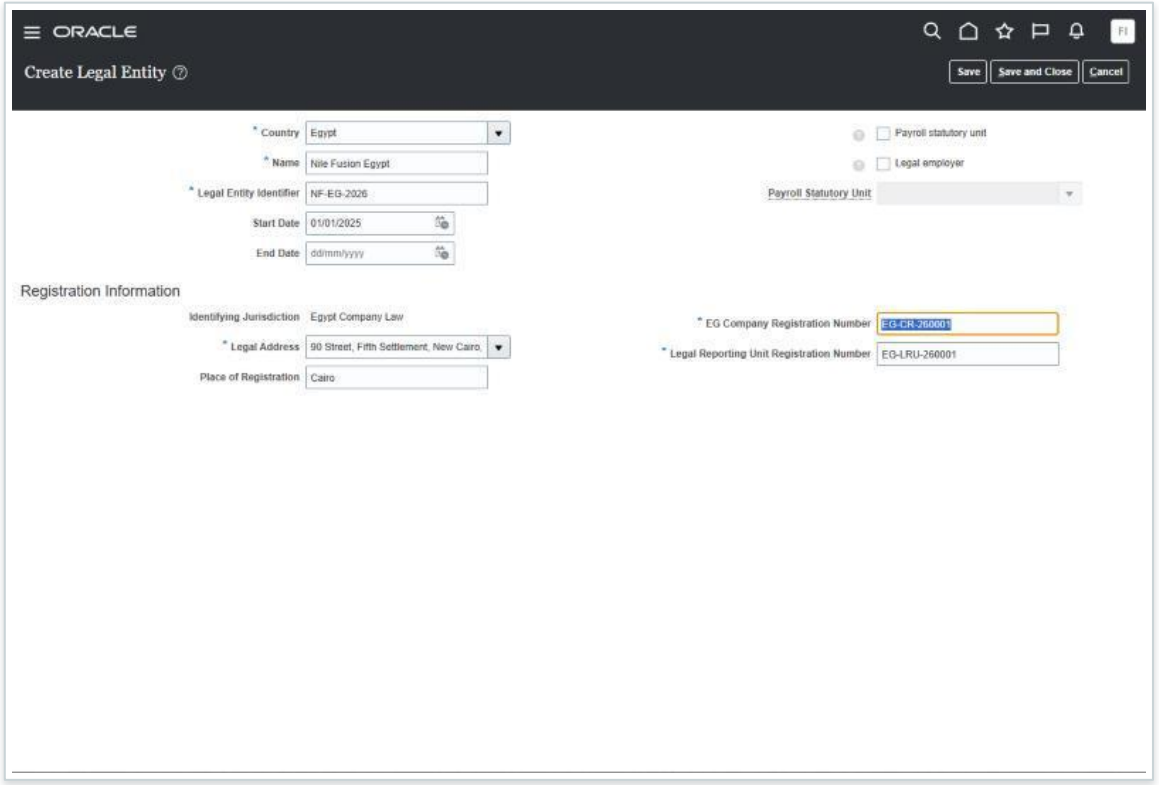

9. Legal addresses saved

WHAT WE DID

Both addresses are saved and available to pick when creating the legal entities.

10. Legal entity: Nile Fusion Egypt

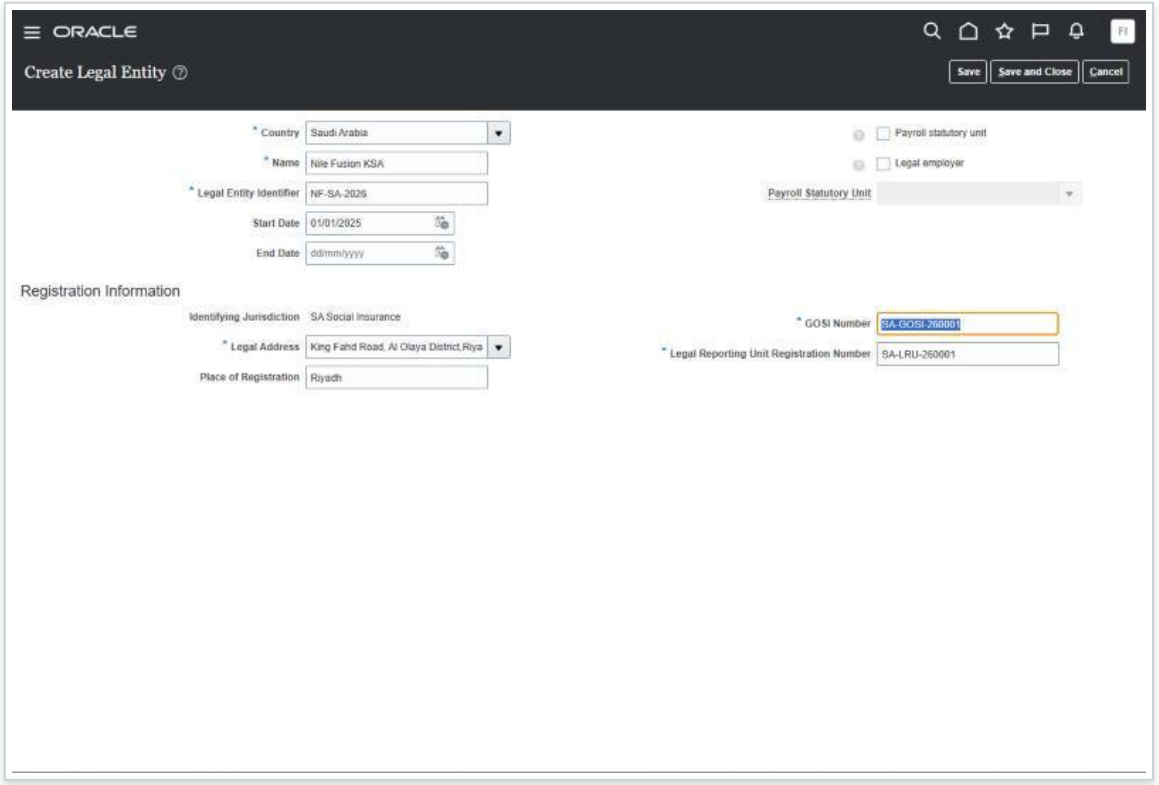

WHAT WE DID

Manage Legal Entity: Nile Fusion Egypt, identifier NF-EG-2026, start 01/01/2025, registration EG-CR-260001, place Cairo.

WHY IT MATTERS

The legal entity is the company recognised by law. It owns transactions and files tax returns.

10. Legal entity: Nile Fusion KSA

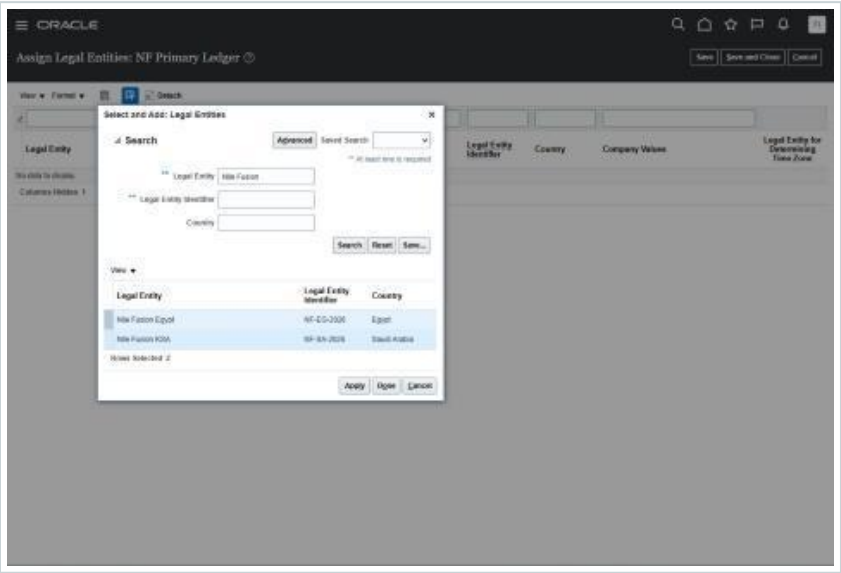

WHAT WE DID

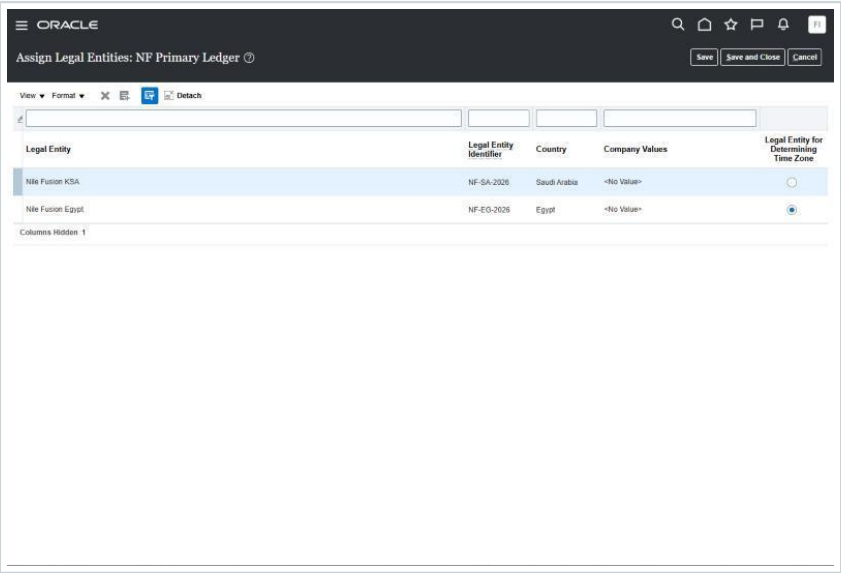

Nile Fusion KSA (Riyadh branch), identifier NF-SA-2026, GOSI SA-GOSI-260001, LRU SA-LRU-260001.

WHY IT MATTERS

The Riyadh branch exports and distributes devices to the Gulf market, so it is a separate entity and lets us demonstrate intercompany.

11. Assign legal entities to the ledger

WHAT WE DID

Assign Legal Entities (scope NF Primary Ledger): Select and Add, search Nile Fusion, apply both, Done.

WHY IT MATTERS

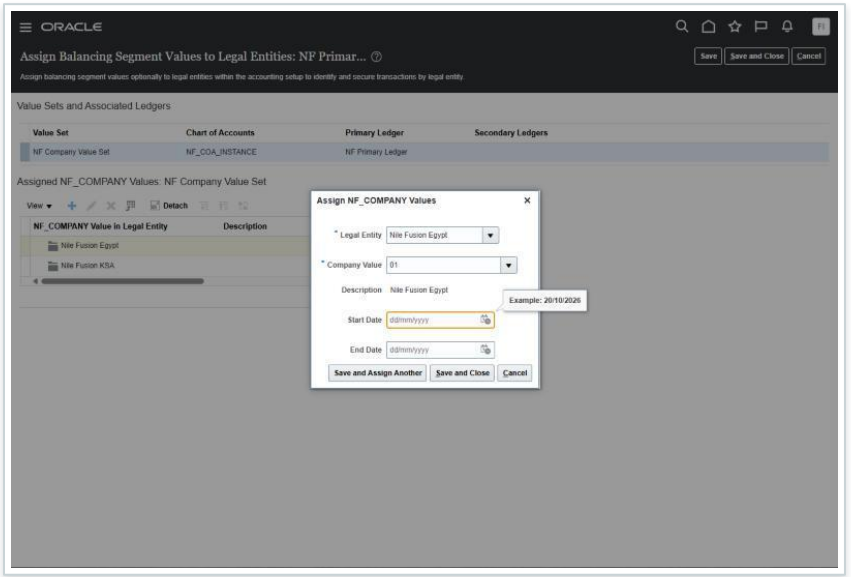

This links the legal entities to the ledger that records their accounting.

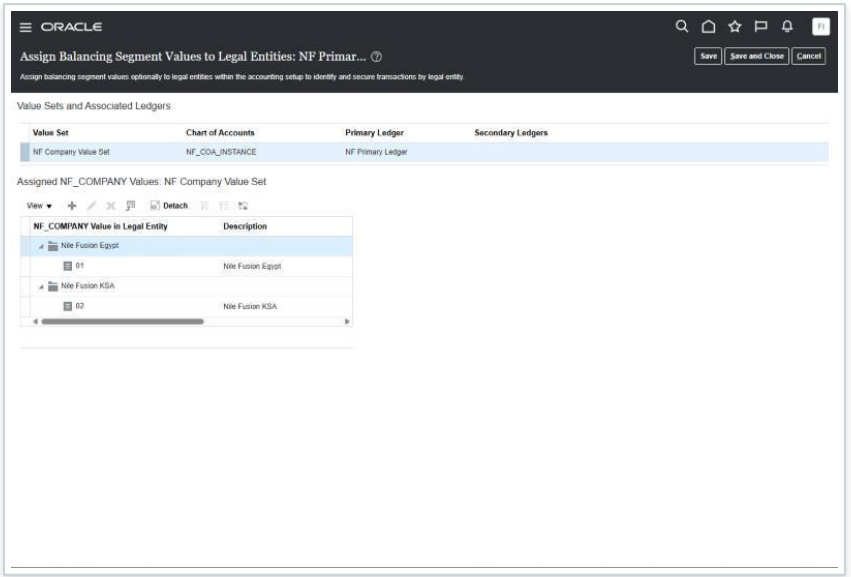

2

Access, Periods and Core Journals (Topics 12–22)

Balancing segments, submit, roles, data access, first period, rapid implementation and the first journal

12. Assign balancing segment values to legal entities

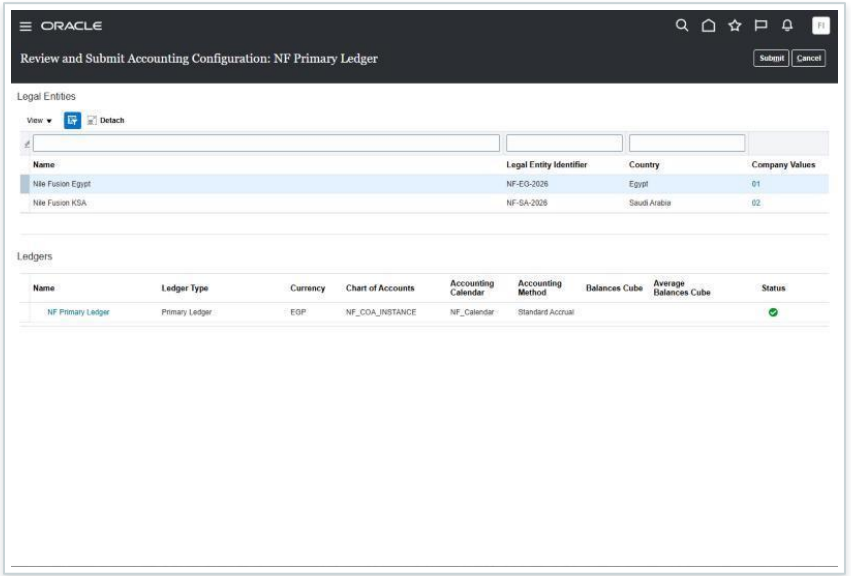

WHAT WE DID

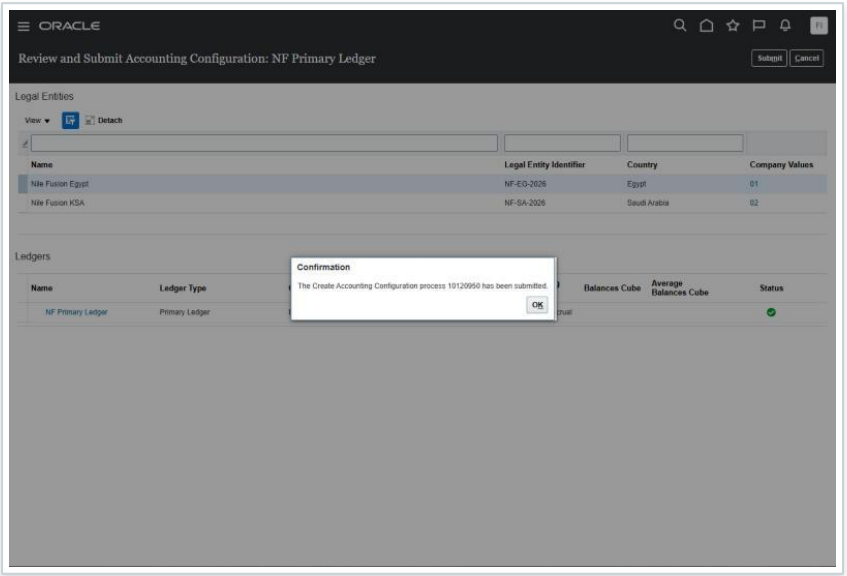

Company 01 ⟶ Nile Fusion Egypt and company 02 ⟶ Nile Fusion KSA.

WHY IT MATTERS

Fusion can then tell which legal entity each journal line belongs to, and balance each company separately.

13. Review and submit accounting configuration

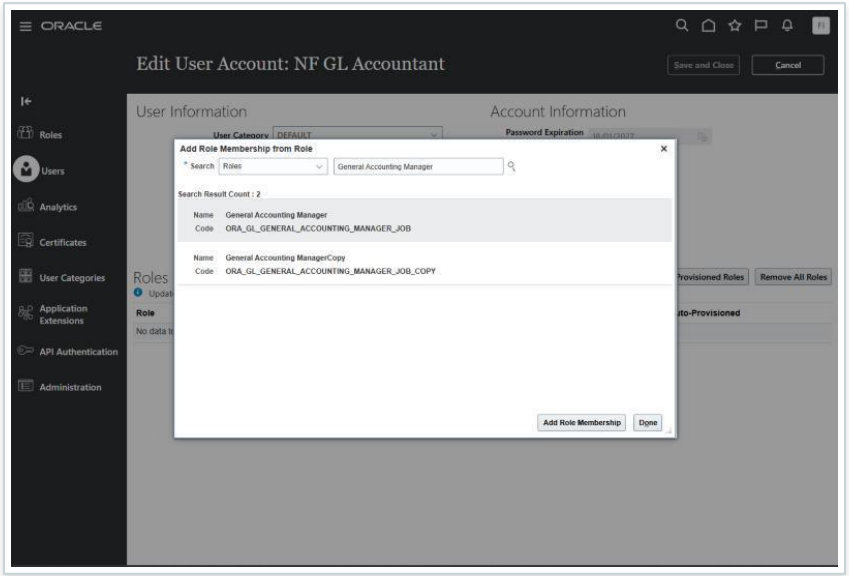

WHAT WE DID

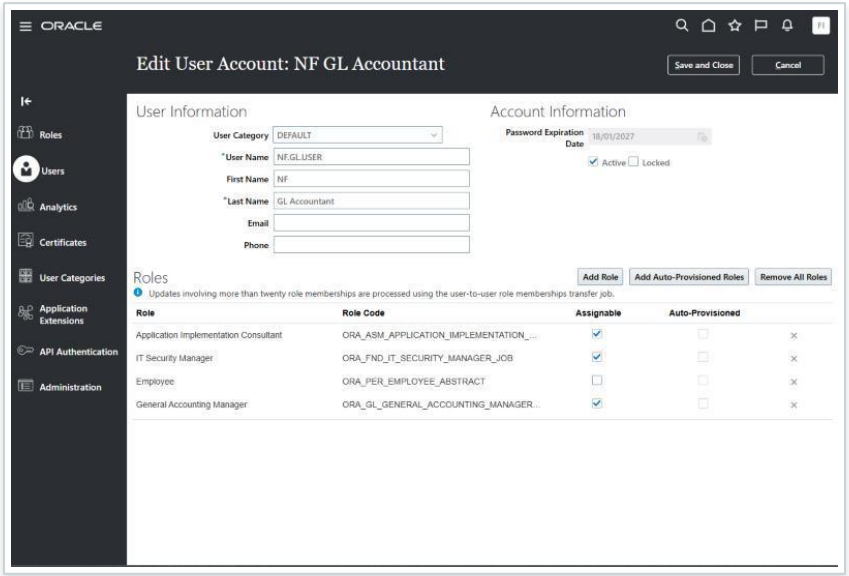

Reviewed the legal entities, company values and ledger (status green), then Submit. Process 10120950 created the configuration.

WHY IT MATTERS

Submitting generates the ledger's balances cube and data access set. The ledger can't be used before this.

14. Add roles in Security Console

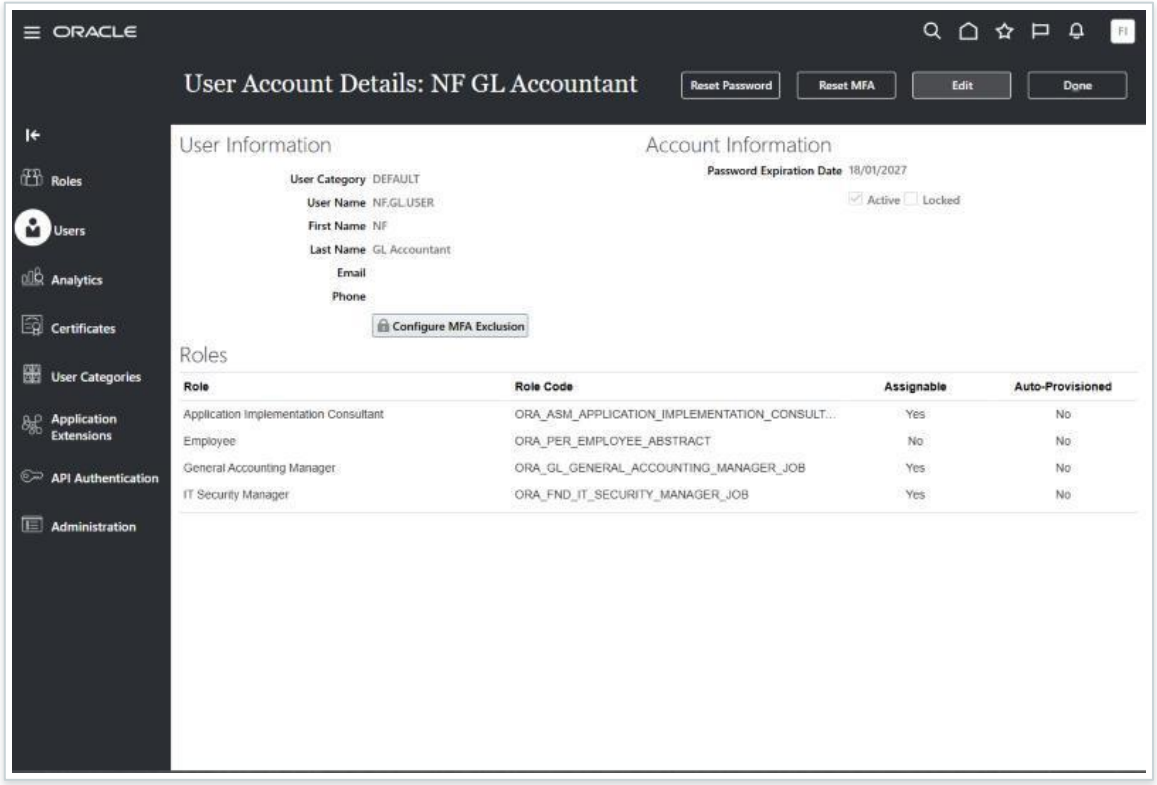

WHAT WE DID

Added the General Accounting Manager job role, plus Application Implementation Consultant, IT Security Manager and Employee.

WHY IT MATTERS

Roles decide which menus and tasks the user can open. General Accounting Manager gives the journal, period and inquiry pages.

14. User details after the roles were added

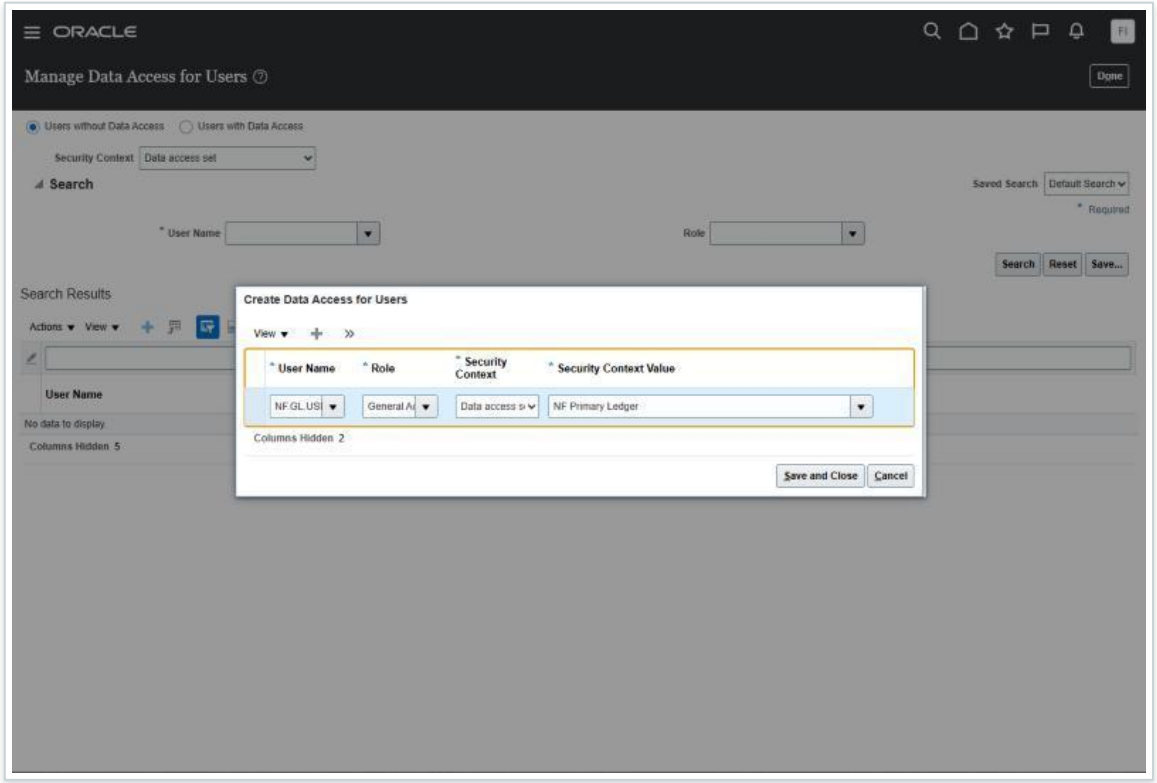

WHAT WE DID

The user record now lists all assigned roles.

WHY IT MATTERS

Confirms the user is ready for data access to the ledger.

15. Data access set for users

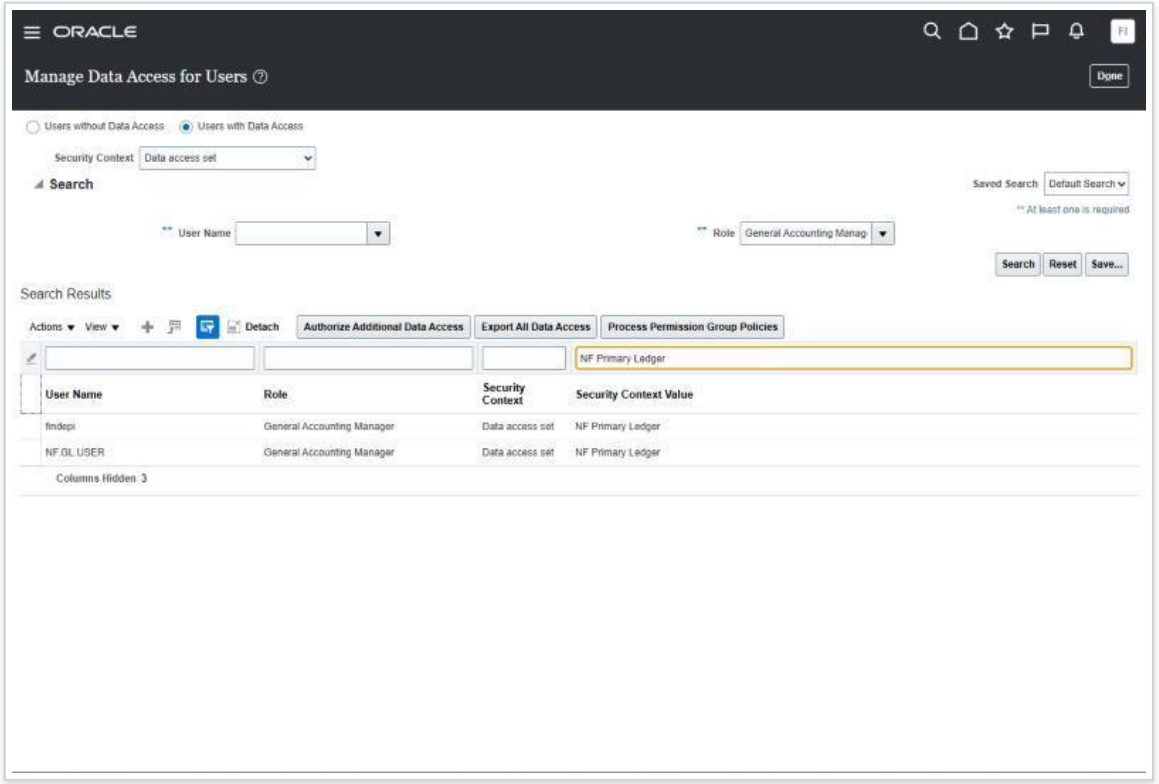

WHAT WE DID

Manage Data Access Set Data Access for Users: user, General Accounting Manager role, security context Data Access Set, value NF Primary Ledger.

WHY IT MATTERS

Roles give the screens and data access gives the ledger. Without it the user can open Journals but cannot see NF Primary Ledger.

15. Data access granted to both users

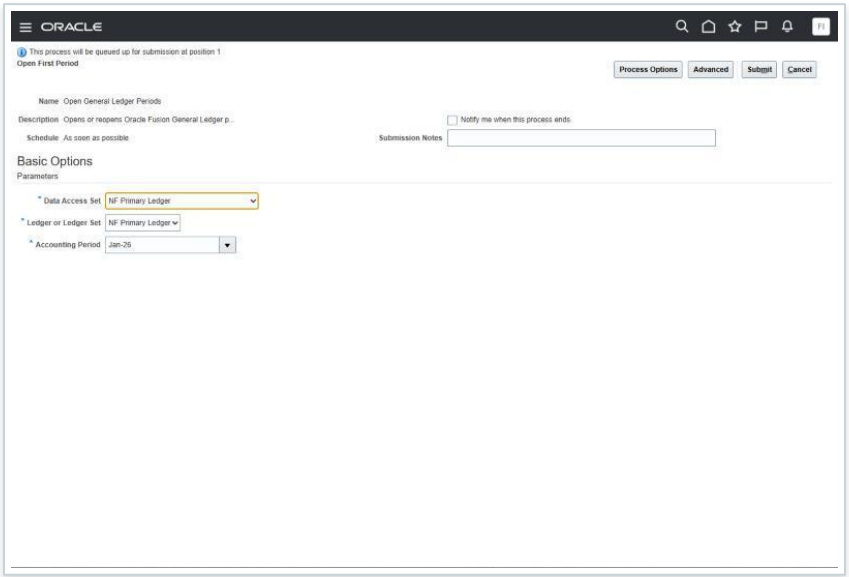

WHAT WE DID

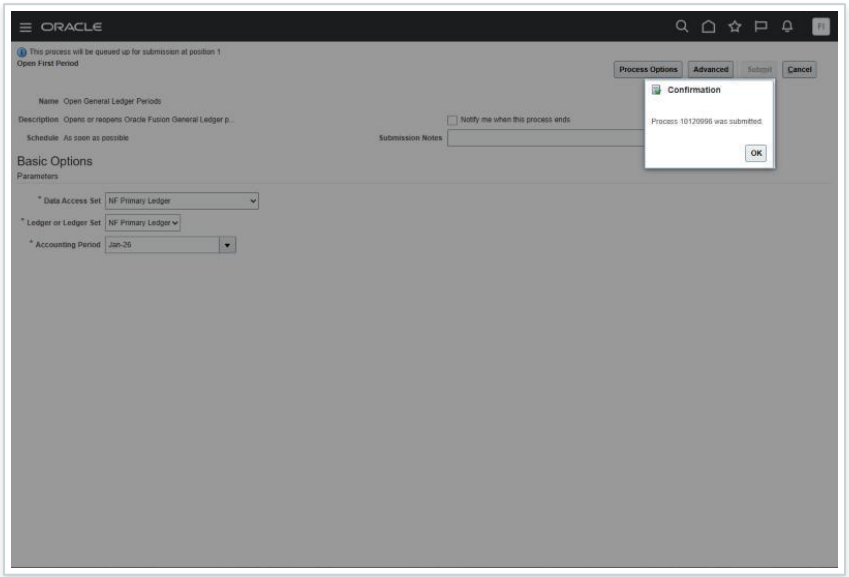

NF.GL.USER and findepi both have General Accounting Manager access to NF Primary Ledger.

WHY IT MATTERS

We granted findepi too so the demo session could enter and post journals.

16. Open first period: Jan-26

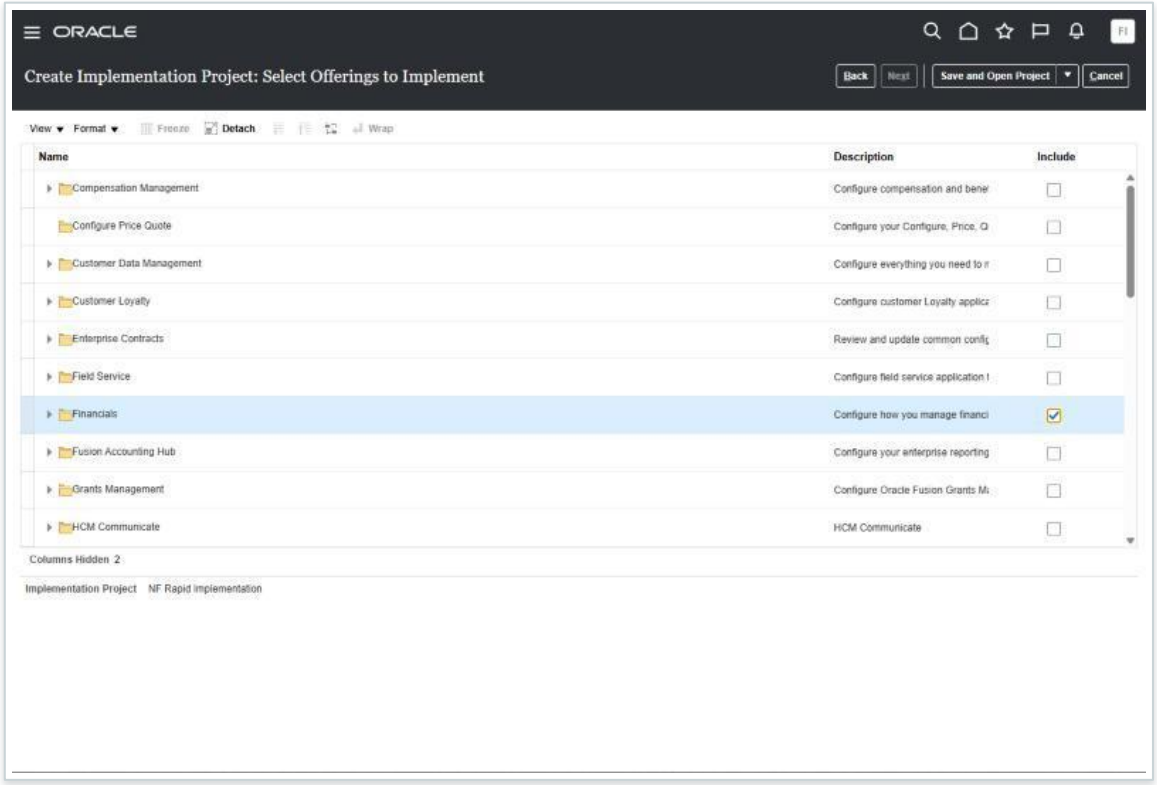

WHAT WE DID

Ran Open First Period for NF Primary Ledger, period Jan-26. The process was submitted (ID 10120996).

WHY IT MATTERS

Journals can only be posted into an open period.

17. Rapid implementation: implementation project

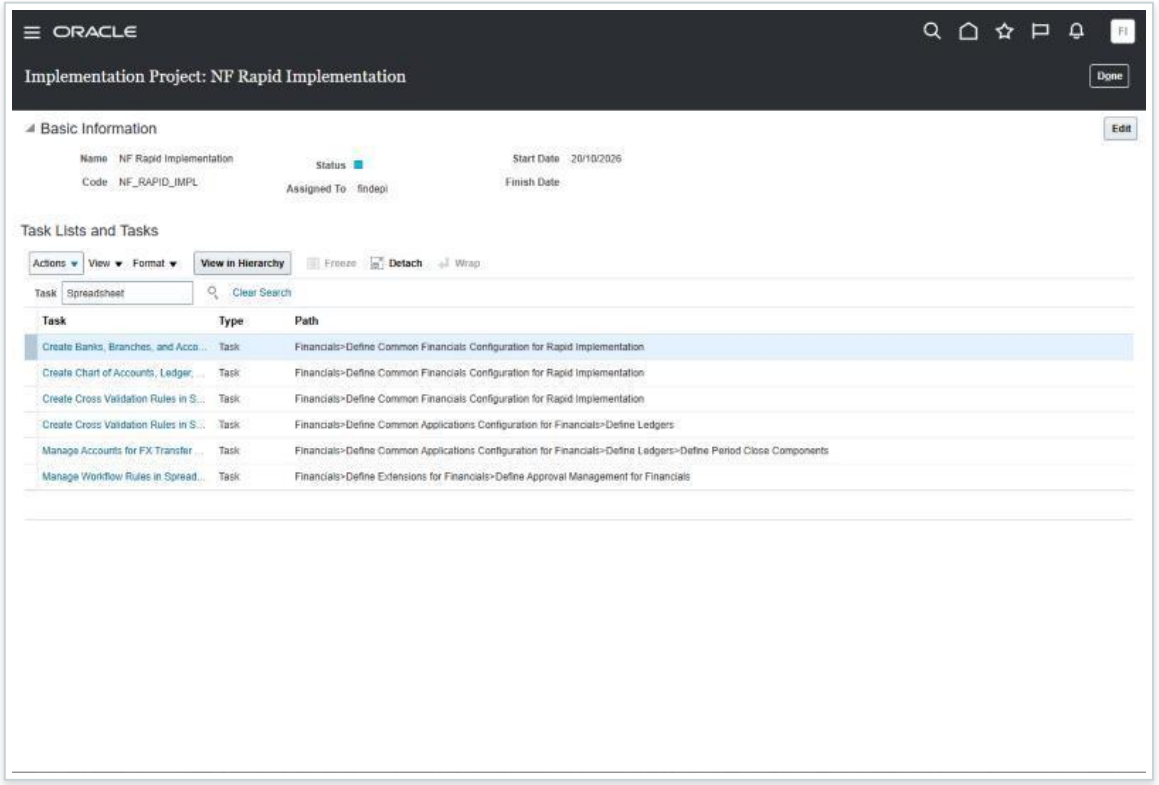

WHAT WE DID

Manage Implementation Projects: created NF Rapid Implementation and included the Financials offering.

WHY IT MATTERS

Rapid implementation is the fast way to load a CoA, ledger, legal entities and business units from one spreadsheet.

17. Rapid implementation: spreadsheet task

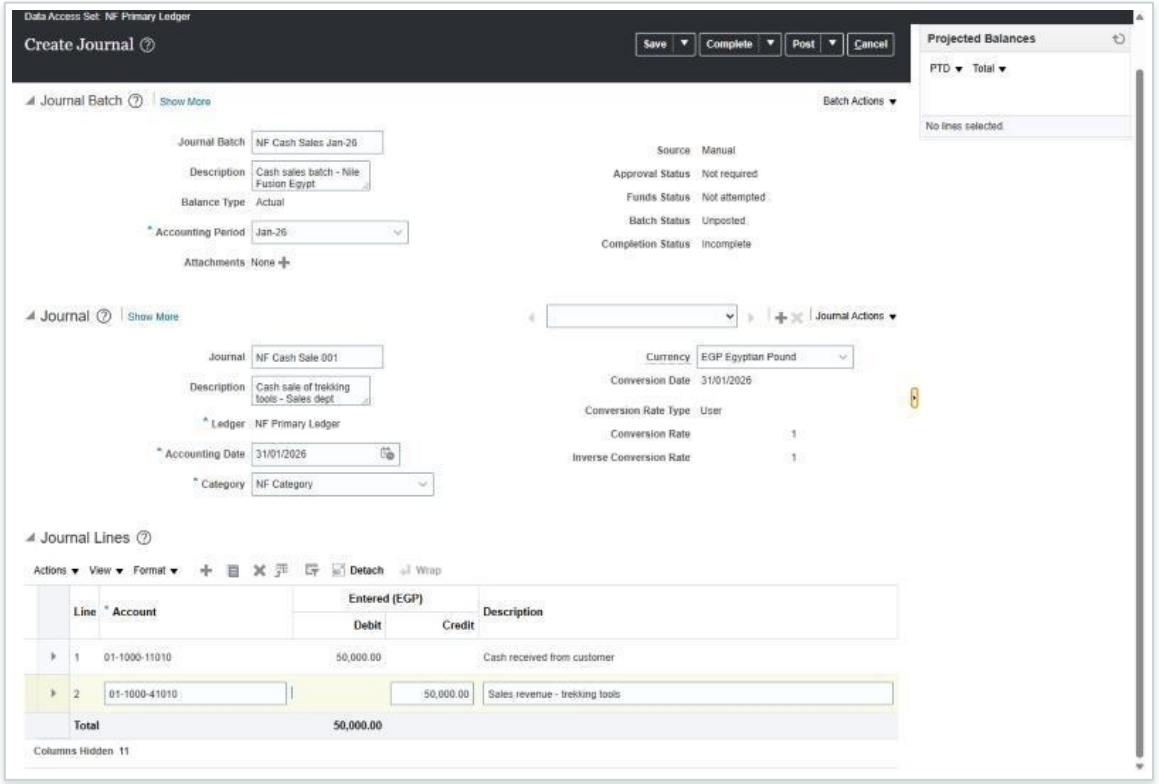

WHAT WE DID

Added the task list Define Common Financials Configuration for Rapid Implementation. It contains Create Chart of Accounts, Ledger, Legal Entities, and Business Units in Spreadsheet.

WHY IT MATTERS

This task downloads the Excel template. You fill it in, generate the upload file and upload it to create everything in one go.

18. Enter a journal

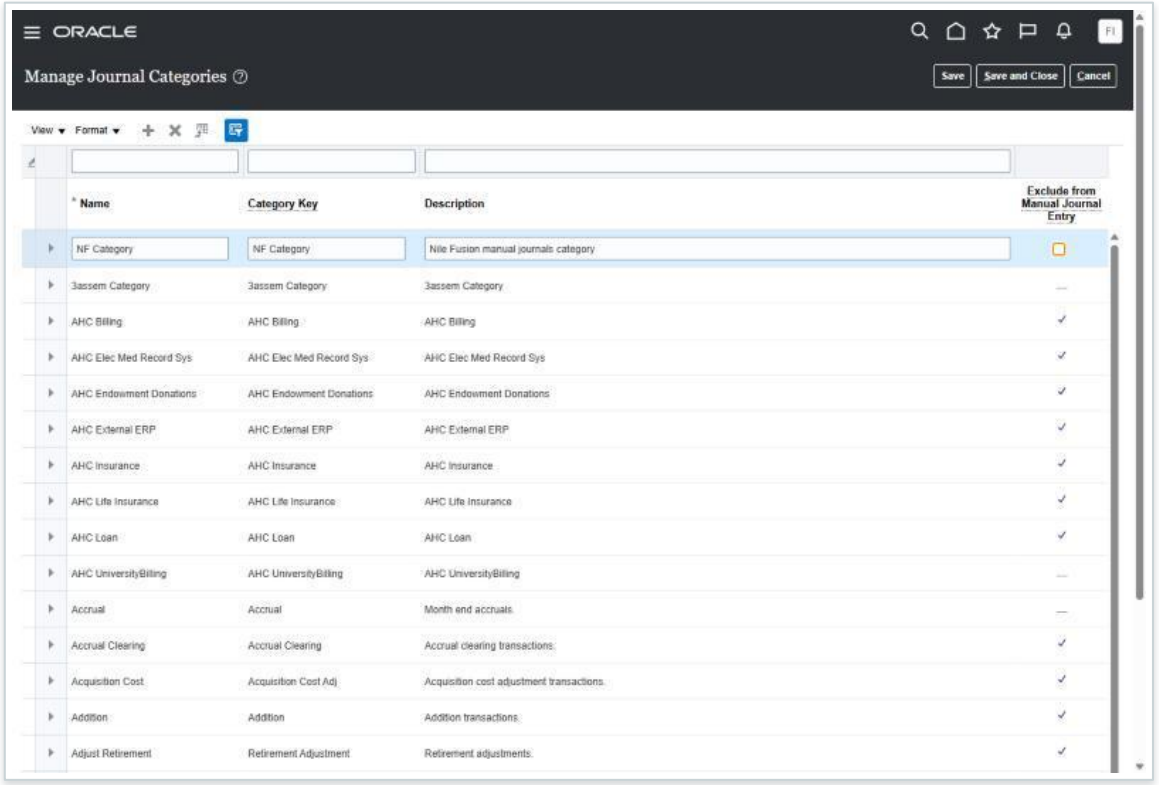

WHAT WE DID

Journals > Create Journal: batch NF Cash Sales Jan-26, journal NF Cash Sale 001, category NF Category. Dr 01-1000-11010 Cash 50,000 and Cr 01-1000-41010 Sales 50,000 EGP.

WHY IT MATTERS

A balanced manual journal for a cash sale of devices by the Cairo Sales department.

19. Define journal category: NF Category

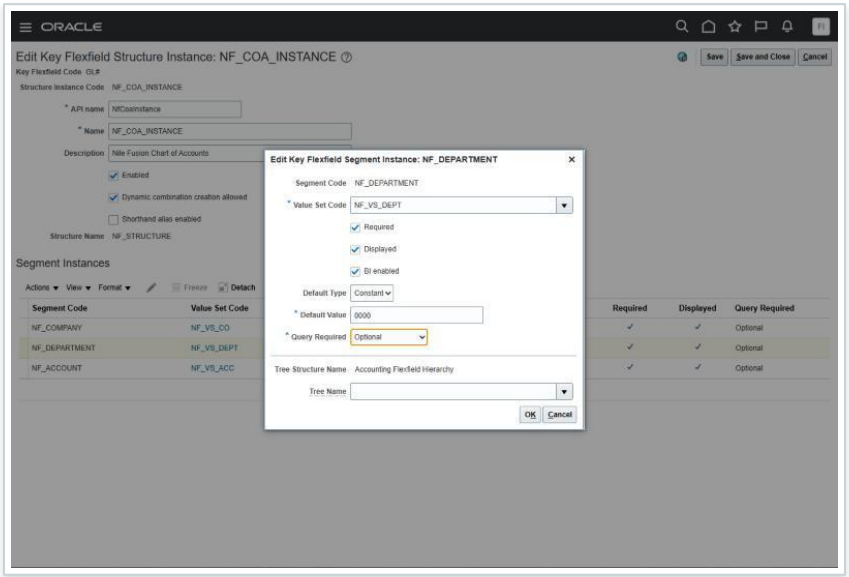

WHAT WE DID

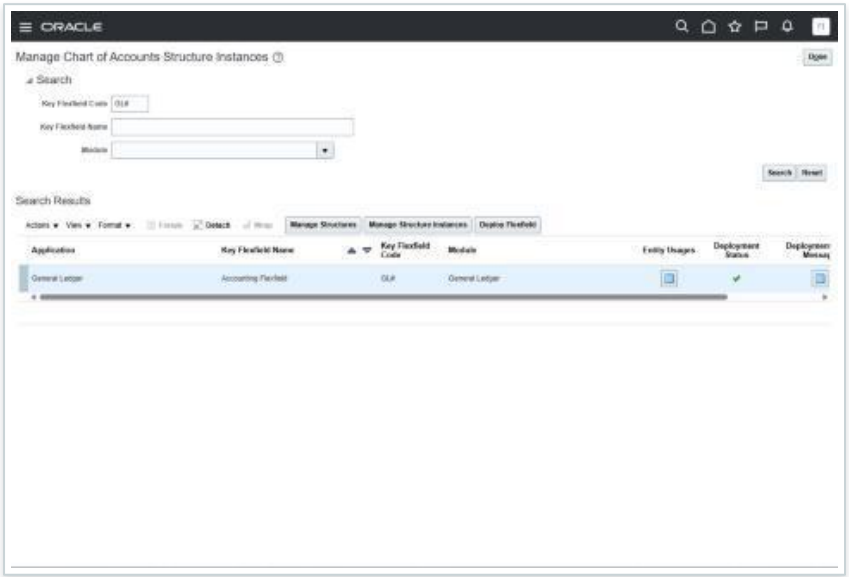

Manage Journal Categories: NF Category, key NF Category, Exclude from Manual Journal Entry unchecked.

WHY IT MATTERS

Categories describe the purpose of a journal and are used by AutoPost, reversal rules, sequences and reports.

20. DEPT default value 0000

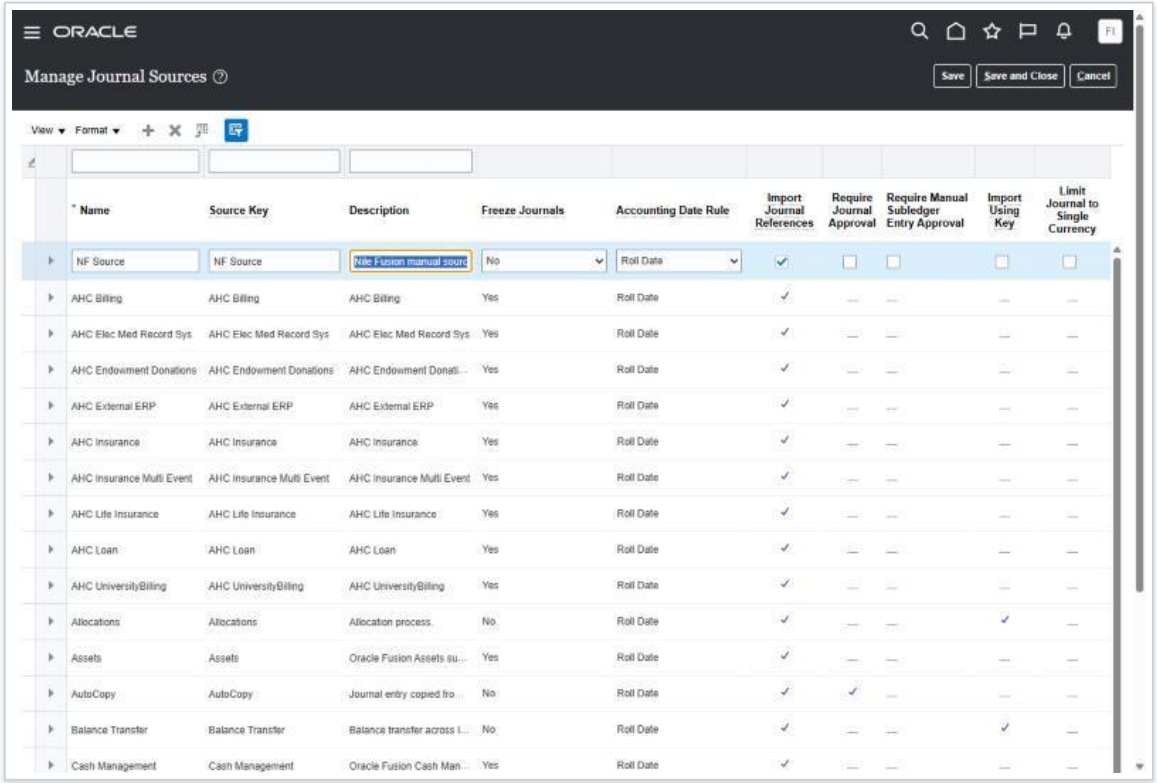

WHAT WE DID

Edited NF_DEPARTMENT in the structure instance: Default Type Constant, Default Value 0000. Then redeployed the flexfield.

WHY IT MATTERS

Balance sheet lines that don't belong to a department get 0000 automatically, which saves typing and errors.

21. Journal source: NF Source

Name	Source Key	Description	Freeze Journals	Accounting Date Rule	Import Journal References	Require Journal Approval	Require Manual Subledger Entry Approval	Import Using Key	Limit Journal to Single Currency
NF Source	NF Source	Nile Fusion manual sourc	No	Roll Date	✓

Balance Transfer	Balance Transfer	Balance transfer across l...	No	Roll Date	✓			✓	
Cash Management	Cash Management	Oracle Fusion Cash Man...	Yes	Roll Date	✓				

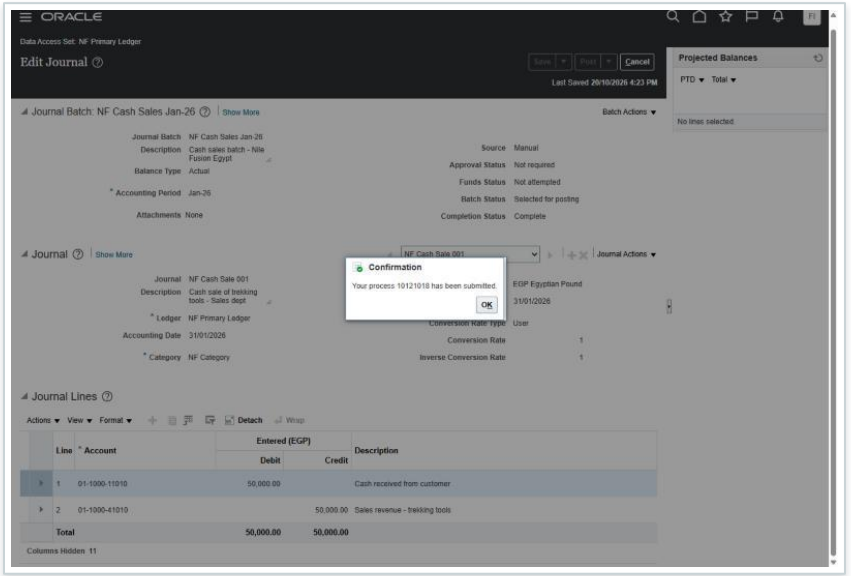

WHAT WE DID

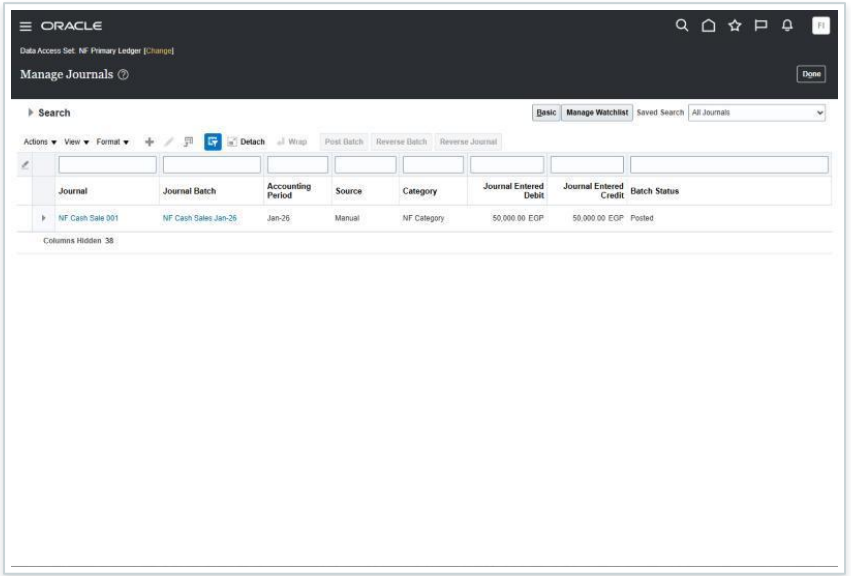

Manage Journal Sources: NF Source, Freeze Journals = No, accounting date rule Roll Date, import references on.

WHY IT MATTERS

Sources describe where a journal comes from (manual, spreadsheet, subledger), which helps with control and reporting.

22. Post journals

WHAT WE DID

Clicked Post. Process 10121018 ran and Manage Journals shows the batch as Posted.

WHY IT MATTERS

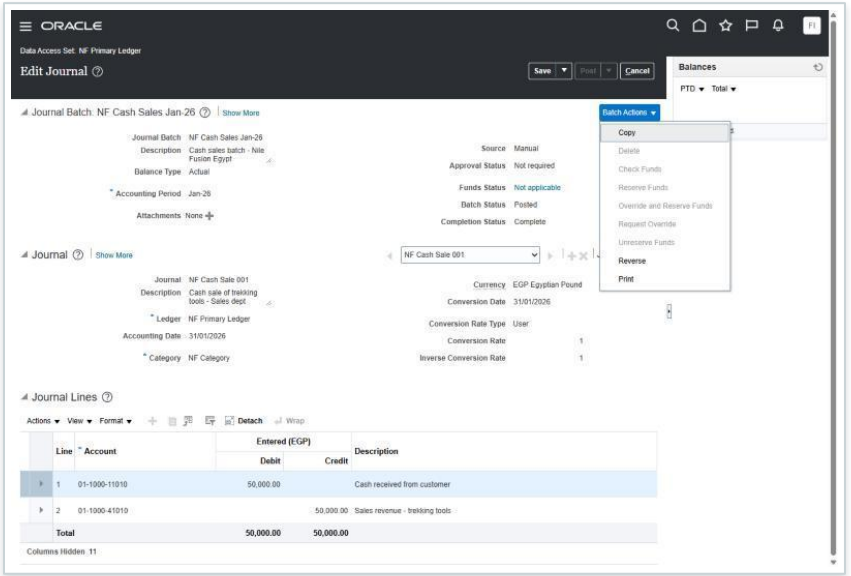

Posting updates the account balances. Before posting, a journal has no effect on reports.

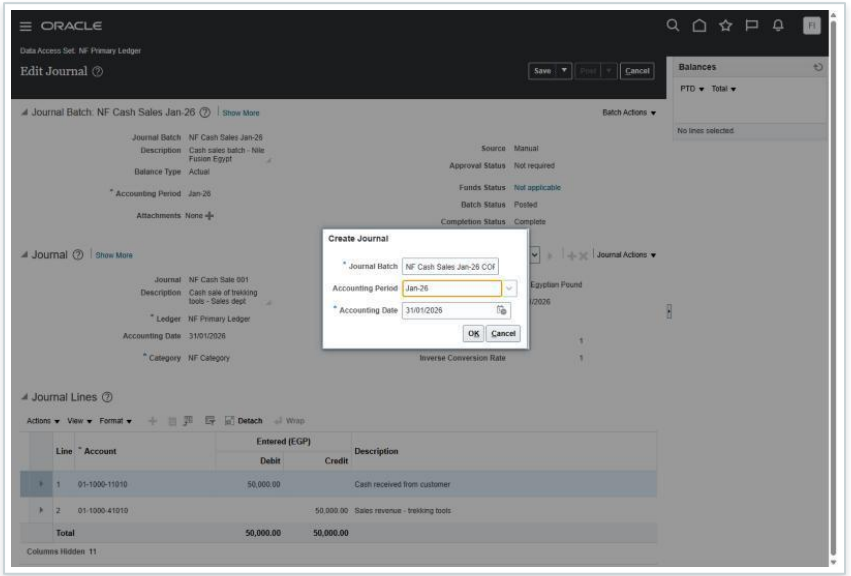

3

Controls, Posting and Reversal (Topics 23–33)

Copy, delete, reverse, trial balance, automation, sequences, spreadsheet journals, suspense, CVR and budget role

23. Copy a journal batch

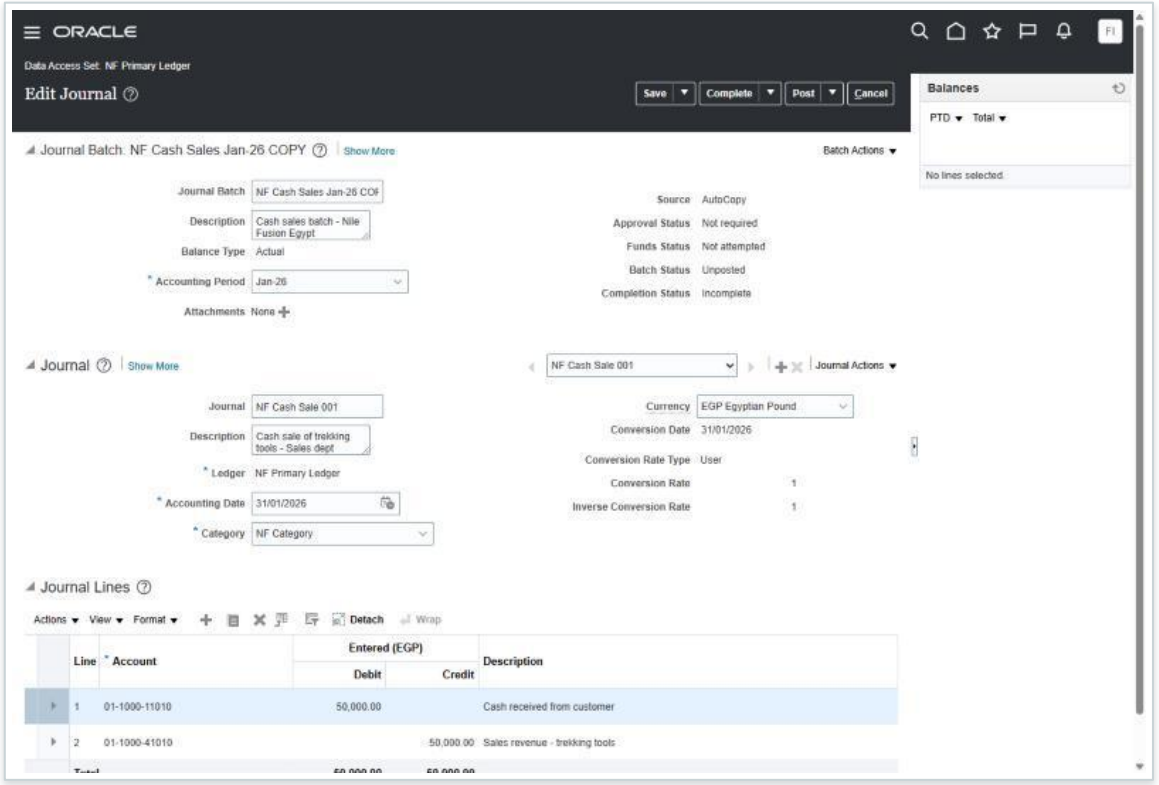

WHAT WE DID

Opened the posted batch > Batch Actions > Copy. New name NF Cash Sales Jan-26 COPY, period Jan-26.

WHY IT MATTERS

Recurring entries can be duplicated instead of retyped.

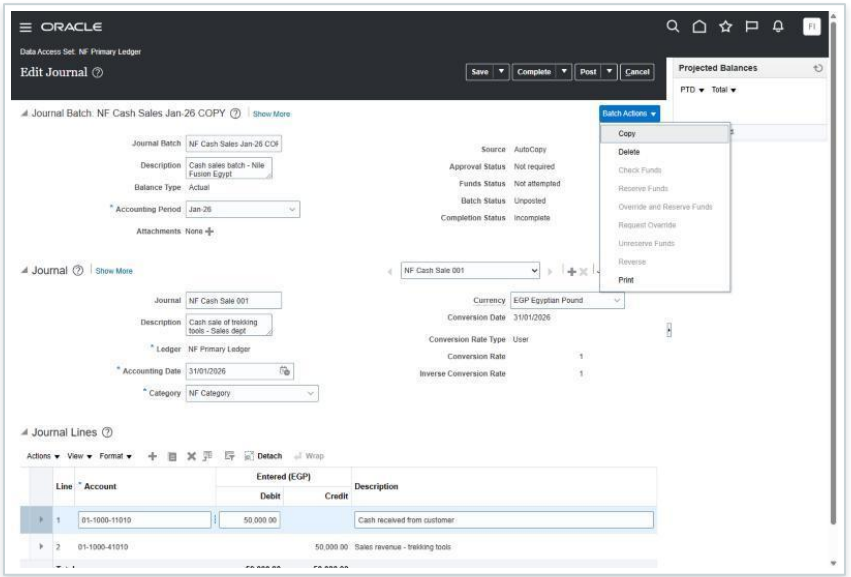

23. Copied batch created

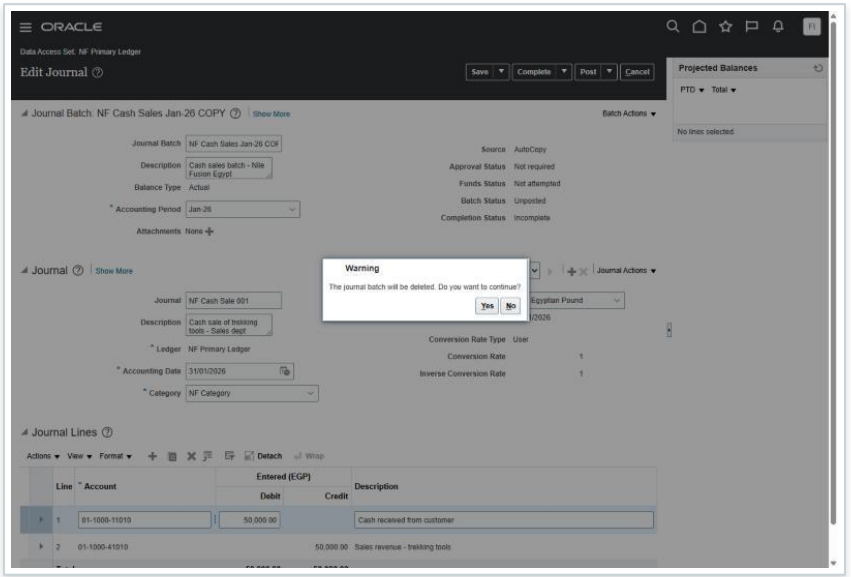

WHAT WE DID

The copy has source AutoCopy and status Unposted. It is ready to edit or post.

24. Delete an unposted batch

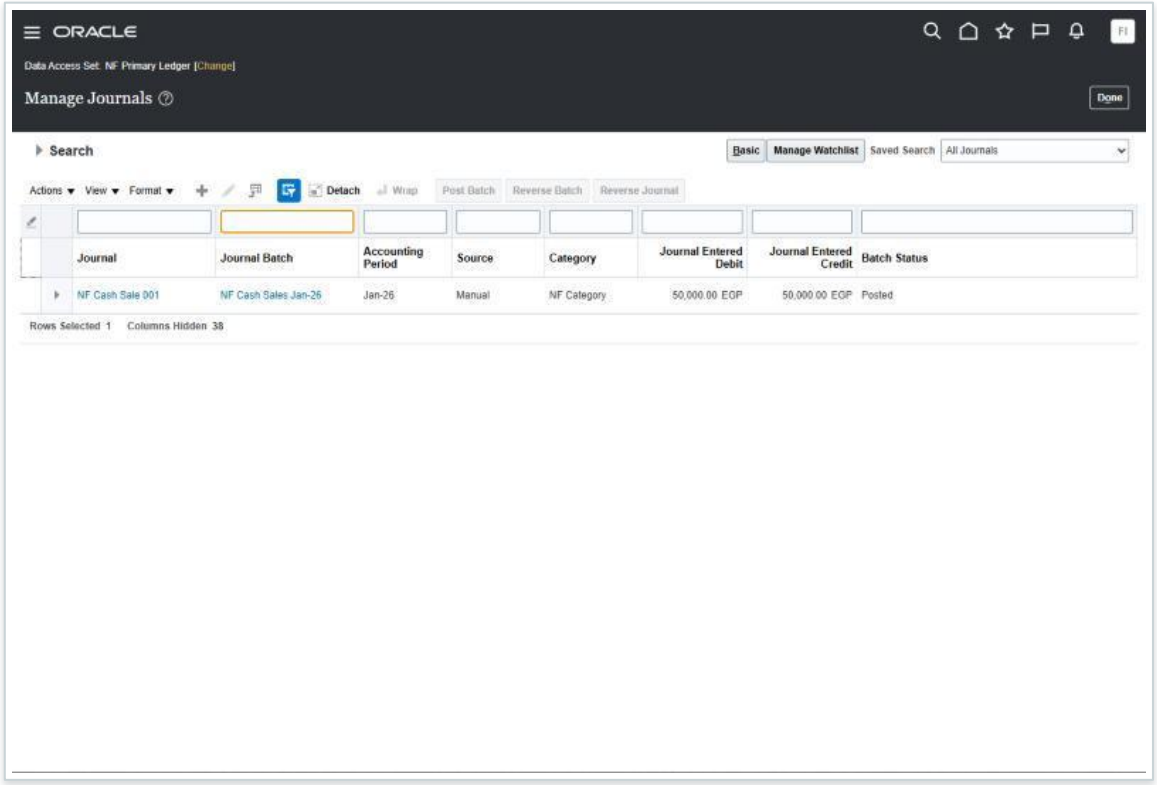

WHAT WE DID

Opened the unposted COPY batch > Batch Actions > Delete > Yes.

WHY IT MATTERS

Only unposted (or error) journals can be deleted. Posted ones must be reversed.

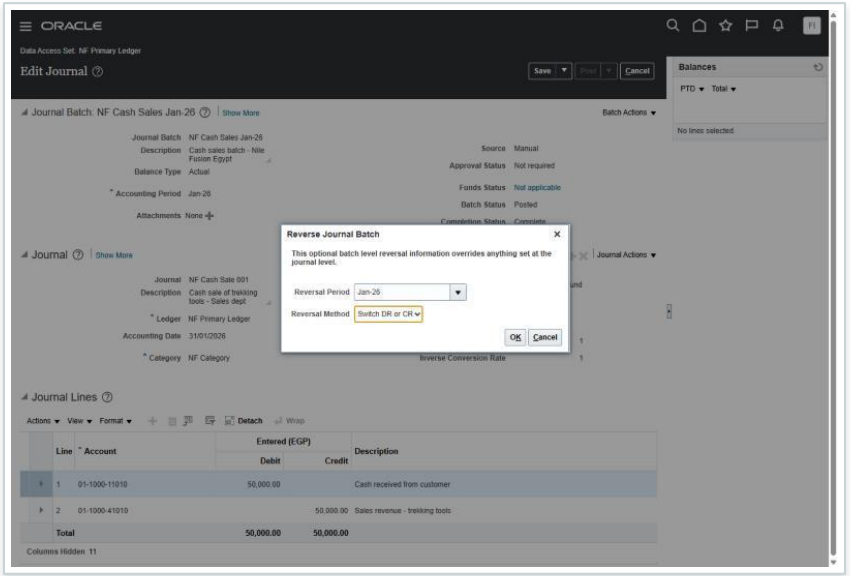

24. Batch deleted

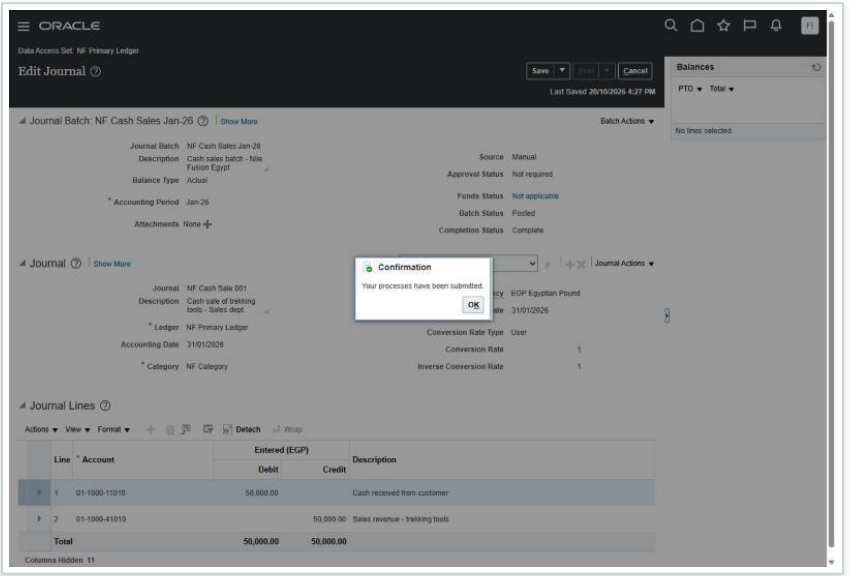

WHAT WE DID

Manage Journals now shows only the original posted batch. The copy is gone.

25. Reverse the journal

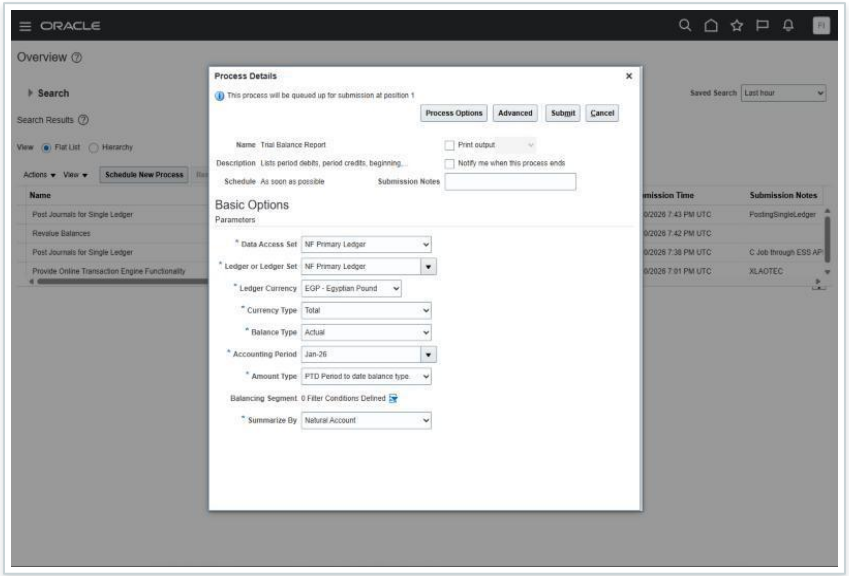

WHAT WE DID

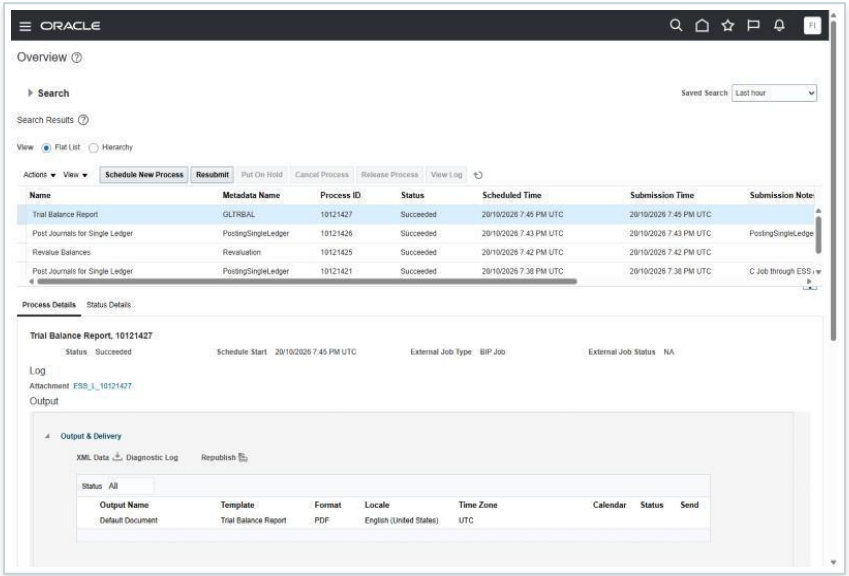

Batch Actions > Reverse: reversal period Jan-26, method Switch DR or CR. The reversal process was submitted.

WHY IT MATTERS

Reversal cancels a posted journal with an equal and opposite entry, keeping the audit trail. Posted journals can't be deleted.

26. Trial Balance Report

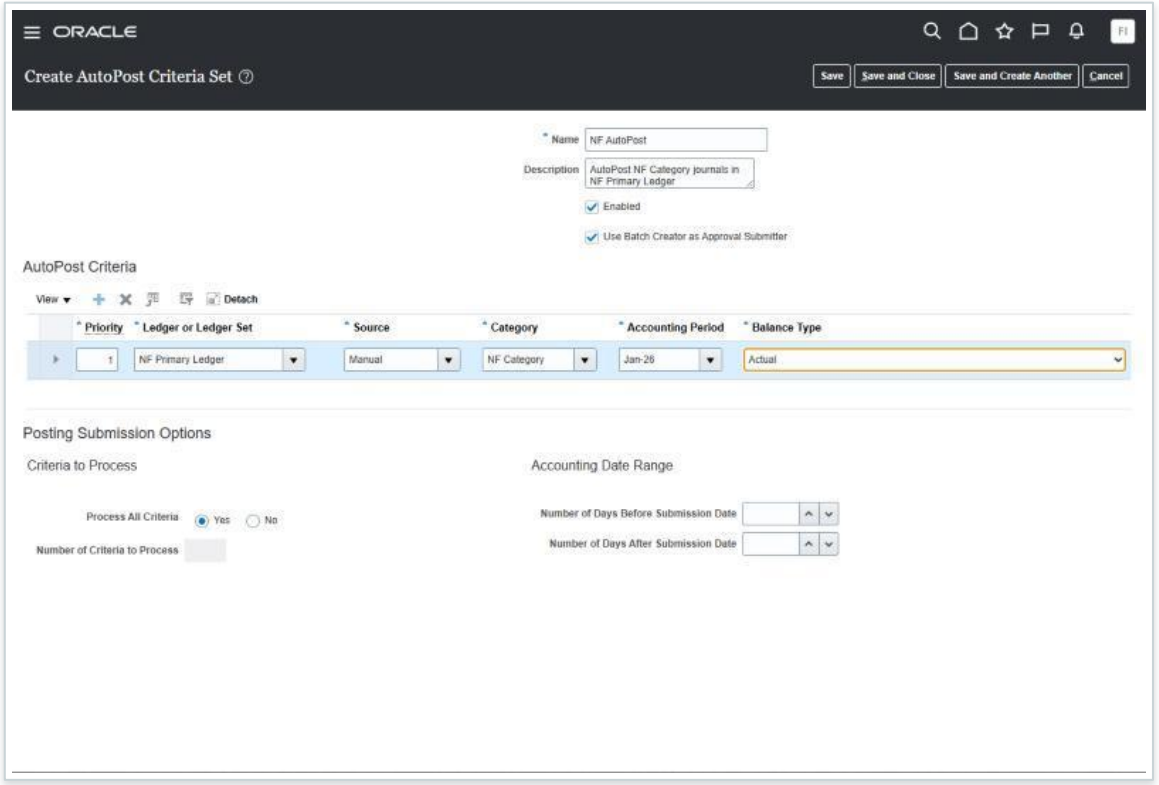

WHAT WE DID

Tools > Scheduled Processes > Schedule New Process > Trial Balance Report: NF Primary Ledger, EGP, Actual, Jan-26, PTD, summarised by natural account. Process 10121427 succeeded and produced a PDF.

WHY IT MATTERS

The trial balance proves debits equal credits after posting and is the starting point for financial statements and the month-end review.

27. AutoPost criteria set

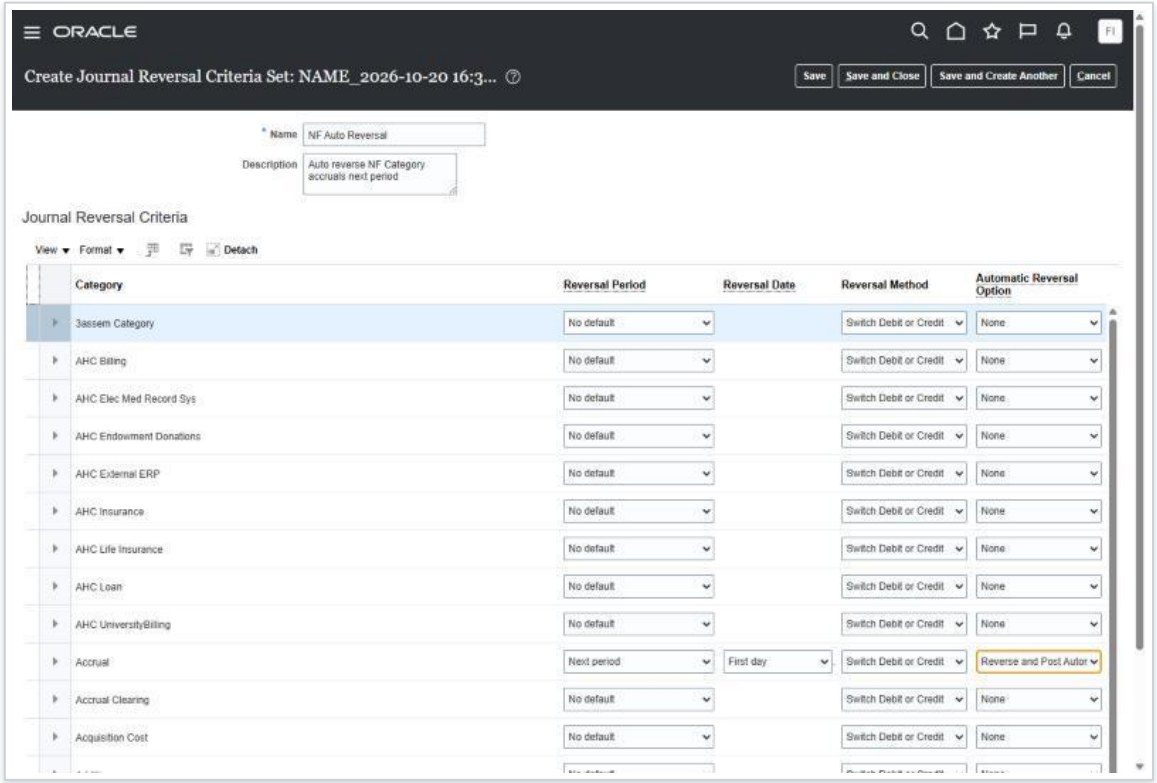

WHAT WE DID

Manage AutoPost Criteria Sets: NF AutoPost, priority 1, NF Primary Ledger, source Manual, category NF Category, period Jan-26, balance type Actual.

WHY IT MATTERS

Posts matching journals automatically on a schedule, so nobody has to post each batch by hand.

28. AutoReverse criteria set

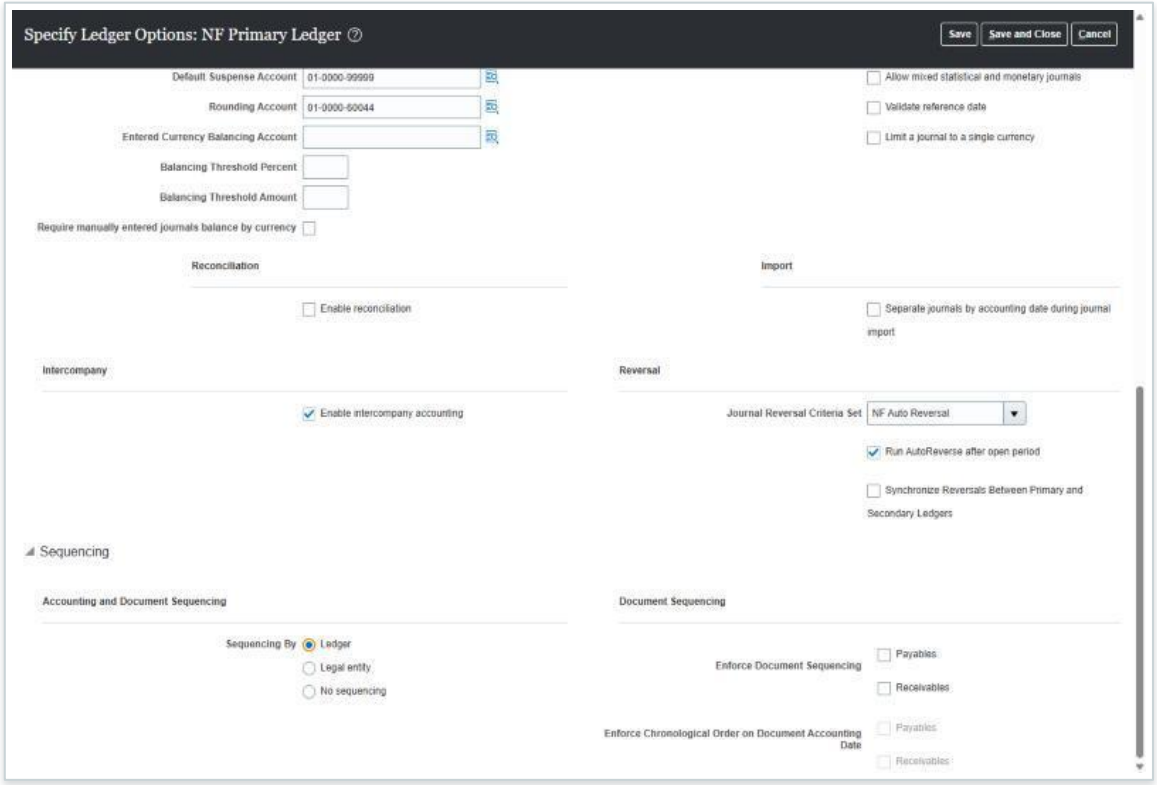

WHAT WE DID

Manage Journal Reversal Criteria Sets: NF Auto Reversal. Accrual category: next period, first day, Switch Debit or Credit, Reverse and Post Automatically.

WHY IT MATTERS

Month-end accruals (e.g. unbilled freight on imported laptops) reverse themselves on day 1 of the next period, so they aren't double-counted.

28. Assign the reversal criteria set to the ledger

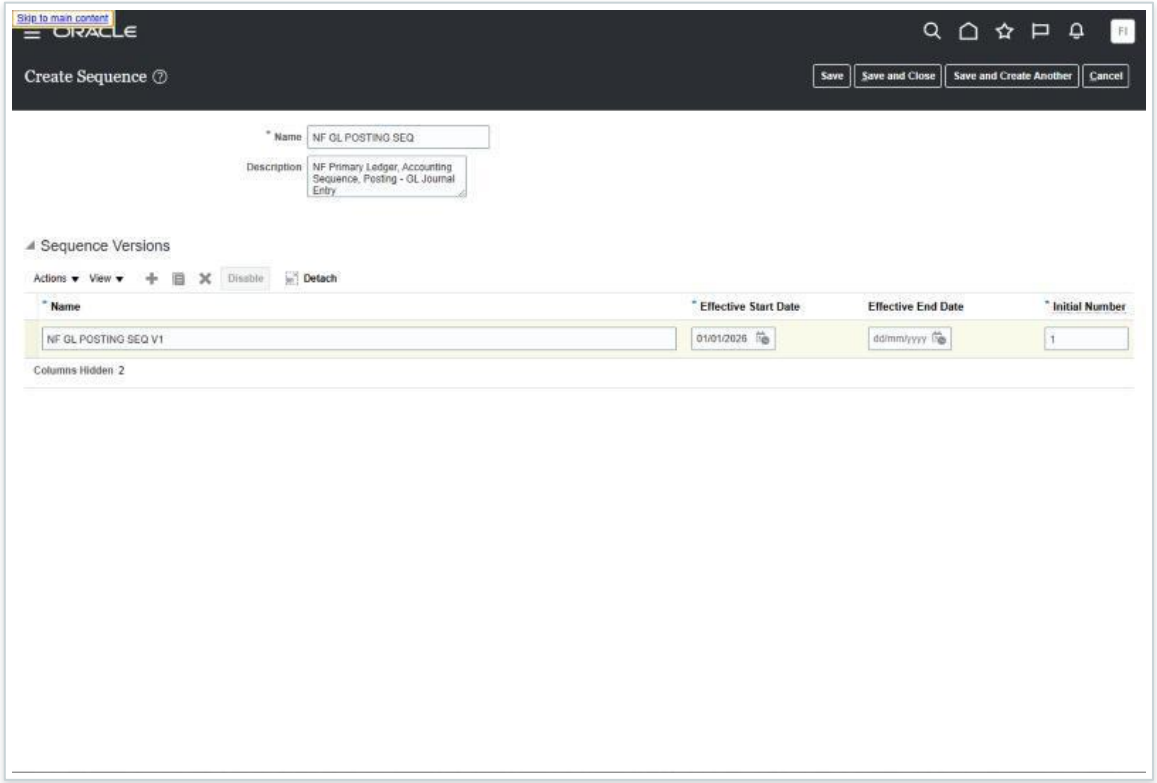

WHAT WE DID

Specify Ledger Options > Reversal: Journal Reversal Criteria Set = NF Auto Reversal, Run AutoReverse after open period checked. Sequencing By = Ledger. We also set the CTA account 01-0000-31030 and rounding account 01-0000-60044.

WHY IT MATTERS

The criteria set only works once it is attached to the ledger. Opening the next period then reverses accruals automatically.

29. Accounting sequence

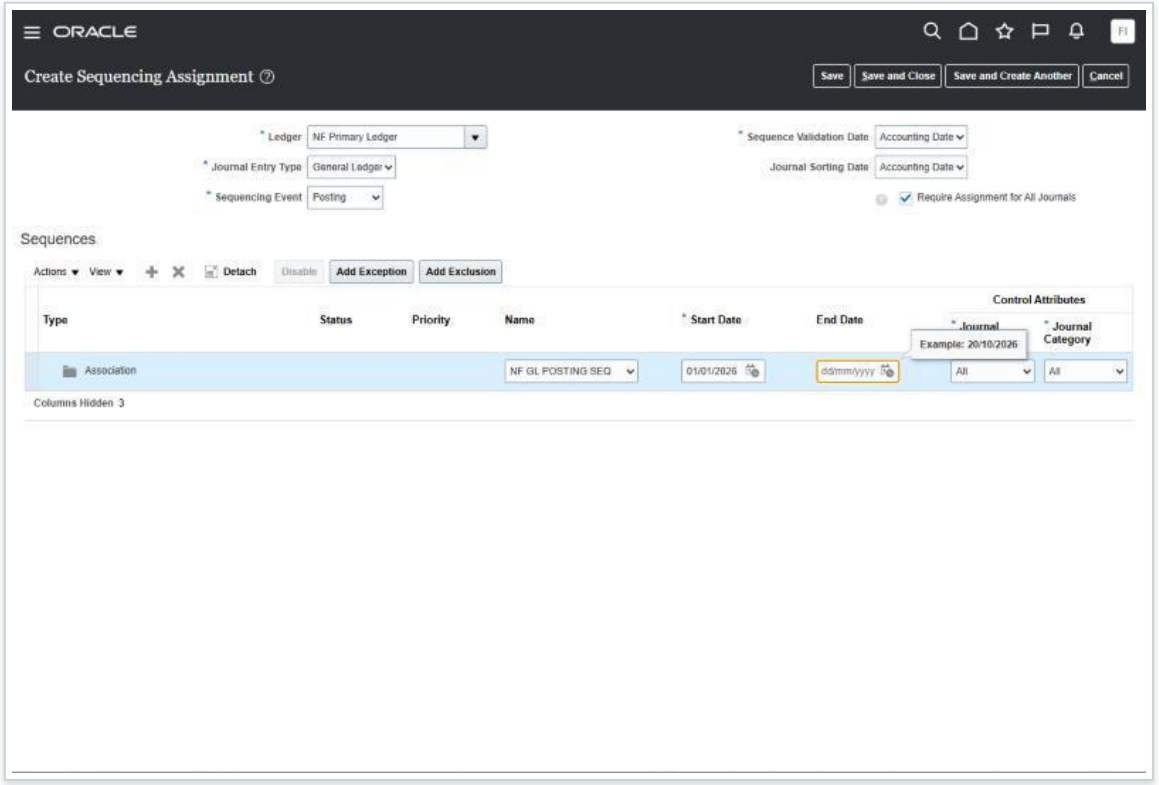

WHAT WE DID

Manage Accounting and Reporting Sequences: created NF GL POSTING SEQ, version V1 starting 01/01/2026, initial number 1.

WHY IT MATTERS

Gives every posted journal a gap-free number, which auditors and tax authorities (ETA in Egypt, ZATCA in KSA) expect.

29. Sequencing assignment

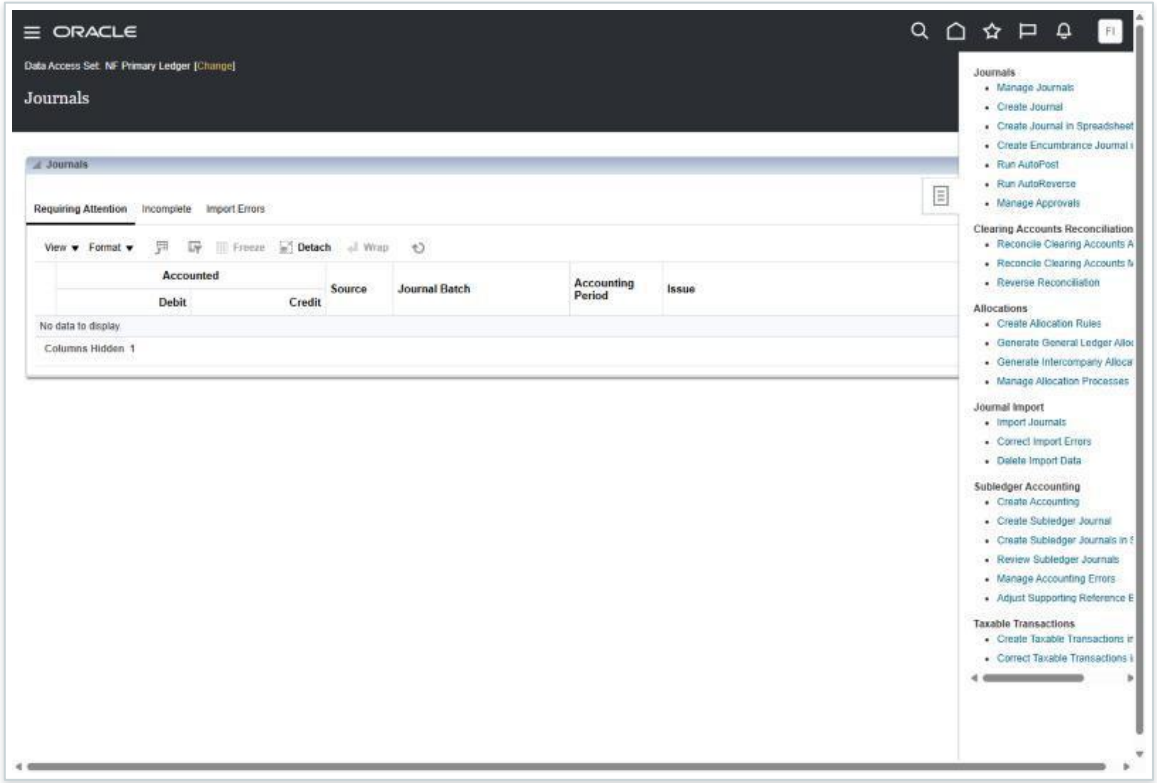

WHAT WE DID

Assignment for NF Primary Ledger: journal entry type General Ledger, sequencing event Posting, validation and sorting by accounting date, sequence NF GL POSTING SEQ.

WHY IT MATTERS

Ties the sequence to our ledger so that every journal is numbered when it posts.

30. Journal from a spreadsheet

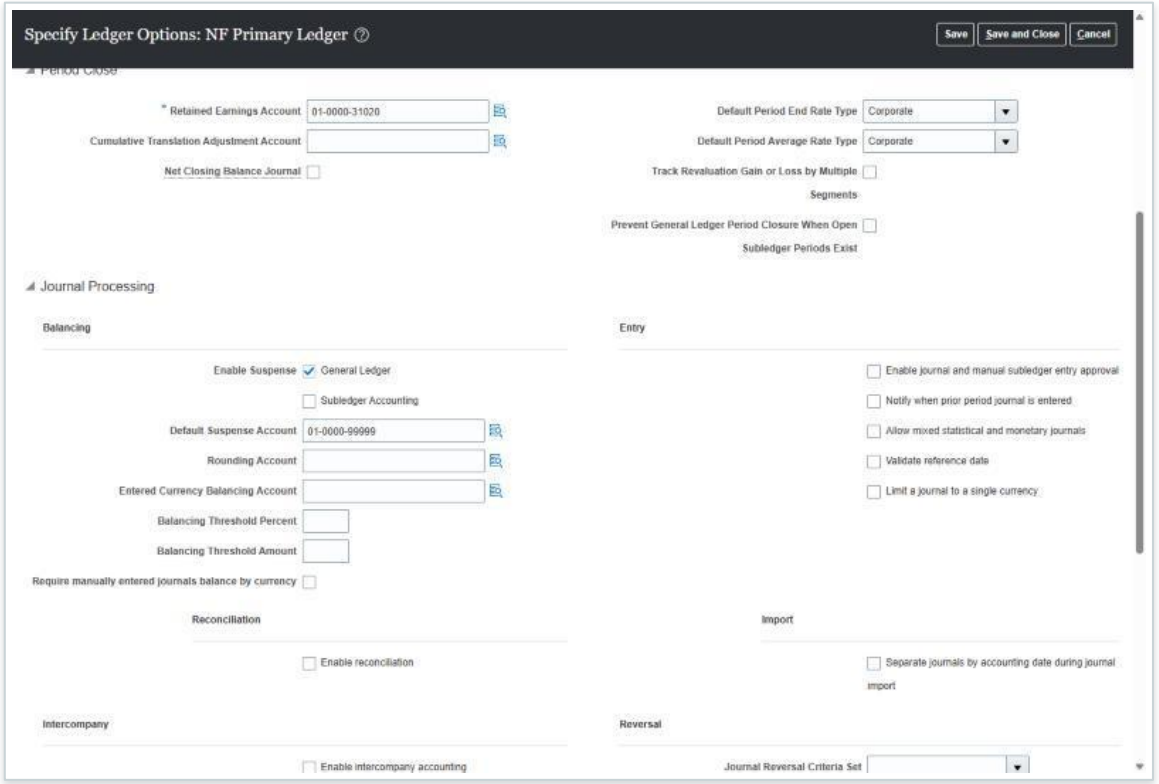

WHAT WE DID

Journals > Tasks: Create Journal in Spreadsheet downloads the ADFdi workbook (JournalEntry.xlsm).

WHY IT MATTERS

For many lines, such as a month of device shipments, Excel is faster. The workbook validates accounts against Fusion and submits the journal directly.

31. Suspense account

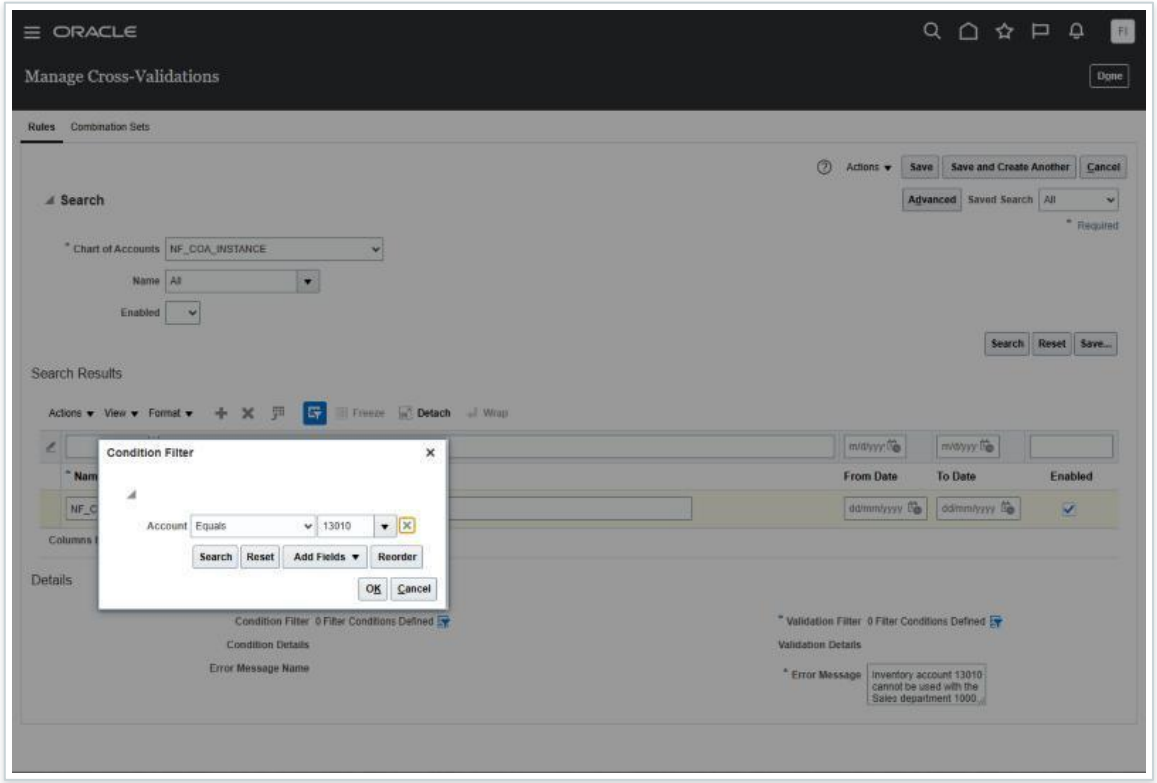

WHAT WE DID

Specify Ledger Options: Enable Suspense = General Ledger, default suspense account 01-0000-99999.

WHY IT MATTERS

If an unbalanced journal is posted, the difference goes to suspense instead of blocking the posting.

32. Cross-validation rule: condition

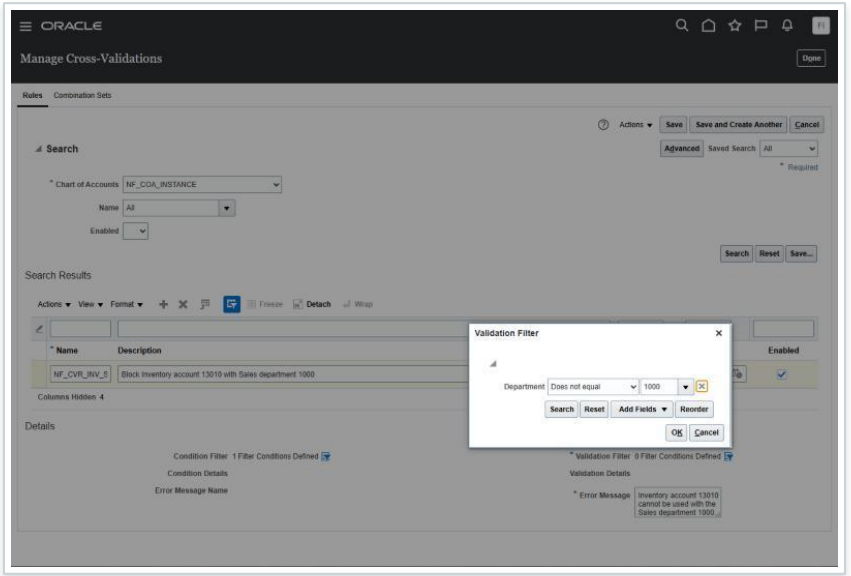

WHAT WE DID

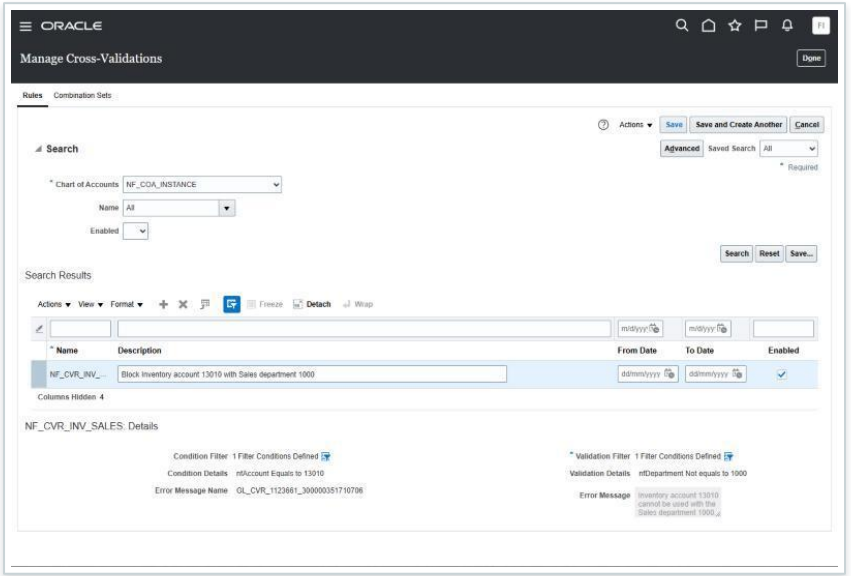

Manage Cross-Validation Rules: NF_CVR_INV_SALES. The condition filter is Account = 13010 (Inventory).

WHY IT MATTERS

The condition says when the rule applies: to any combination that uses the inventory account.

32. Cross-validation rule: validation and message

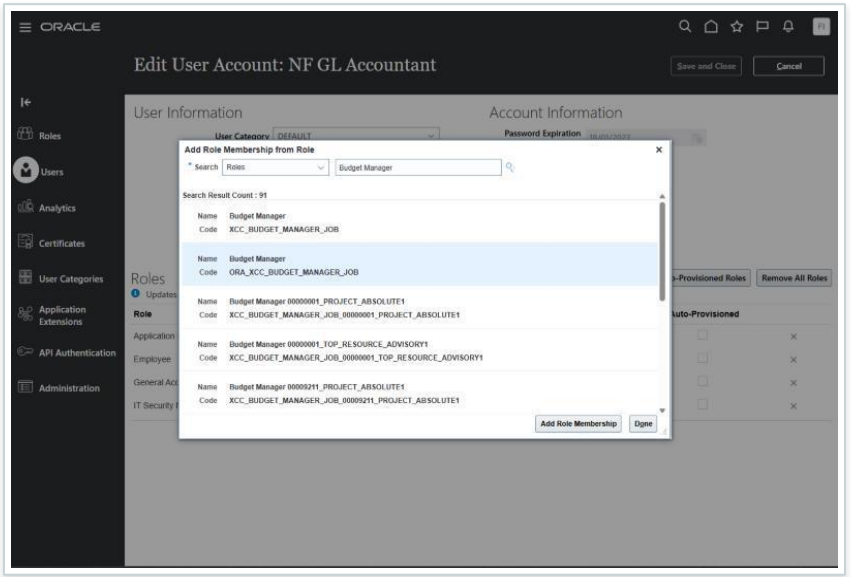

WHAT WE DID

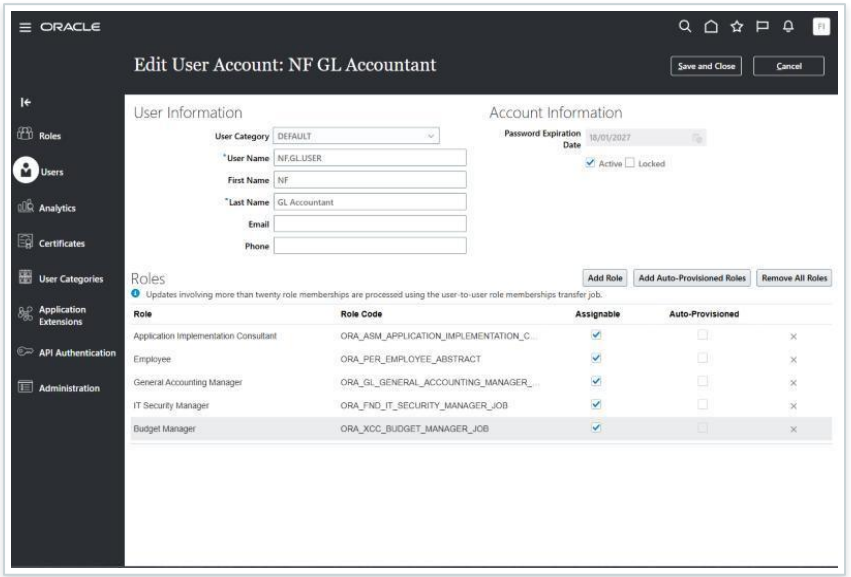

Validation: Department does not equal 1000. Error message: "Inventory account 13010 cannot be used with the Sales department 1000."

WHY IT MATTERS

Stops users from creating a combination like 01-1000-13010. Device inventory belongs to the warehouse, not sales.

33. Add role: Budget Manager

WHAT WE DID

Security Console > Users > NF GL Accountant > Edit > Add Role: searched Budget Manager and added ORA_XCC_BUDGET_MANAGER_JOB, then Save and Close.

WHY IT MATTERS

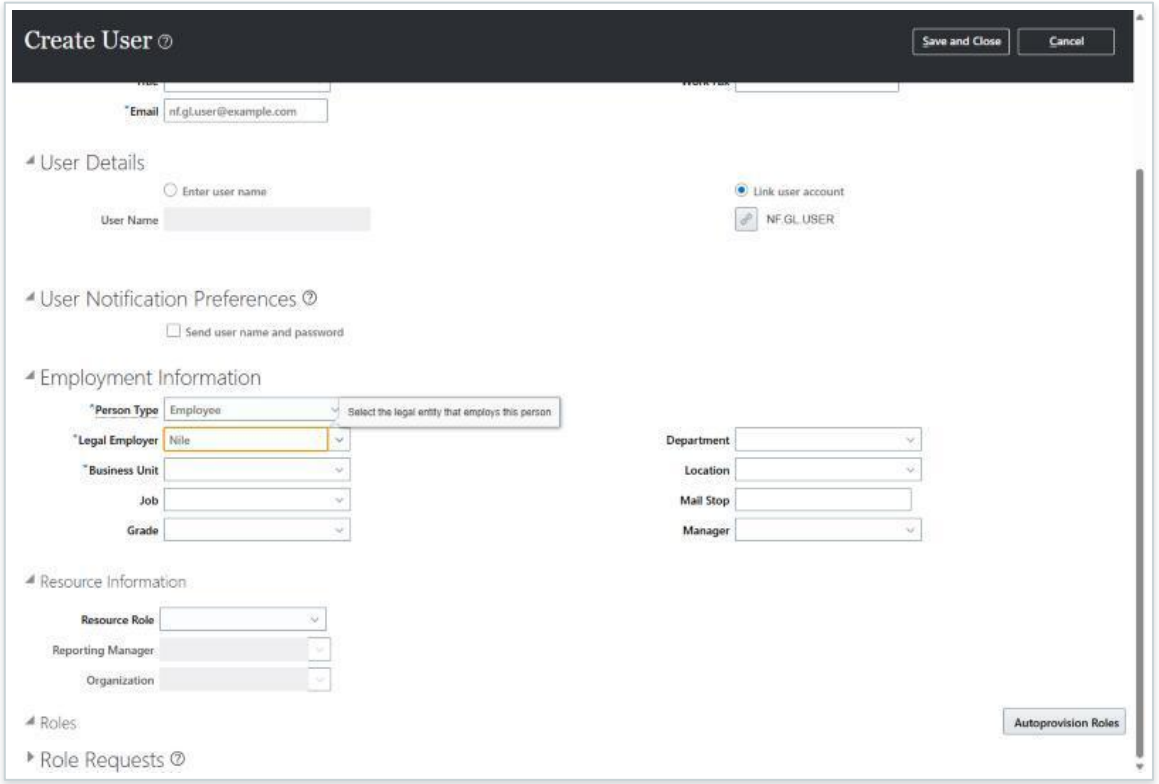

The Budget Manager role opens the Budgetary Control work area: entering, reviewing and transferring budgets.

4

Budgets (Topics 34–44)

Users, business unit, budgetary control, control budget, budget entry, review, increase, transfer and rate types

34. Manage Users

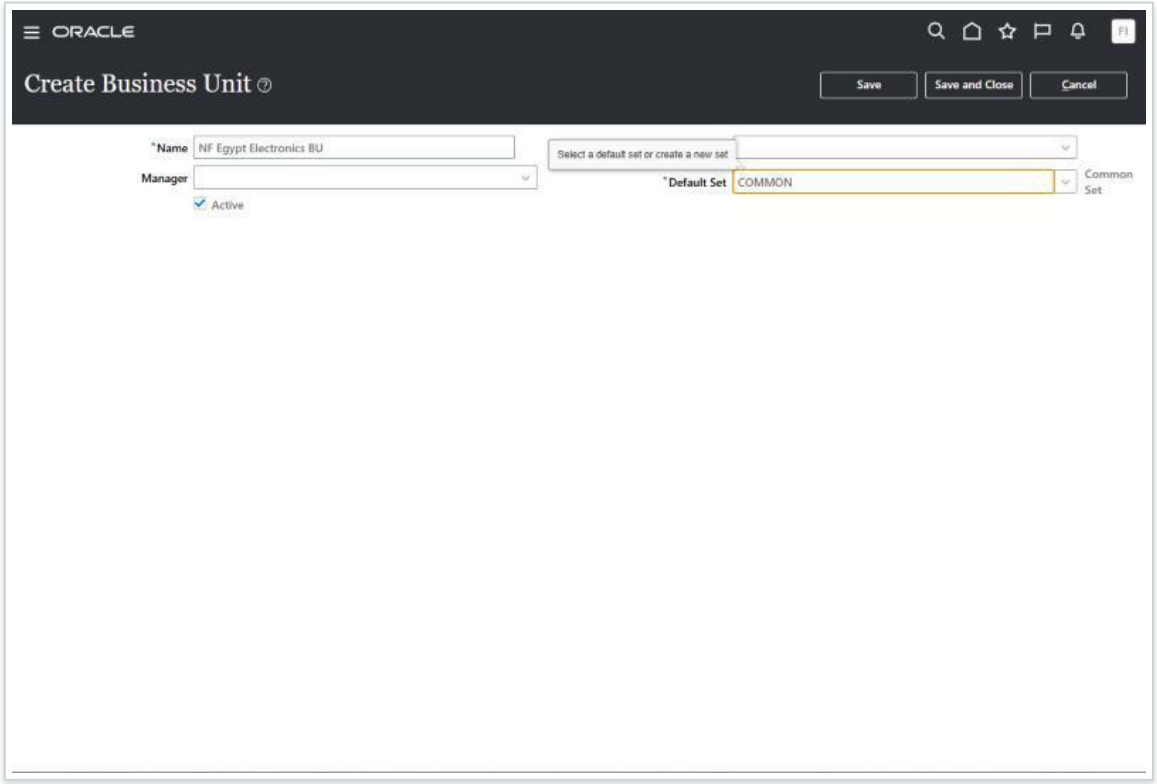

WHAT WE DID

Setup > Manage Users > Create: person NF GL Accountant, hire date 01/01/2025, Link user account = NF.GL.USER, person type Employee. Legal employer and business unit come next.

WHY IT MATTERS

Manage Users links an application user to a person (employee) record, which approvals, budget managers and HR-based security rely on.

35. Manage Business Unit

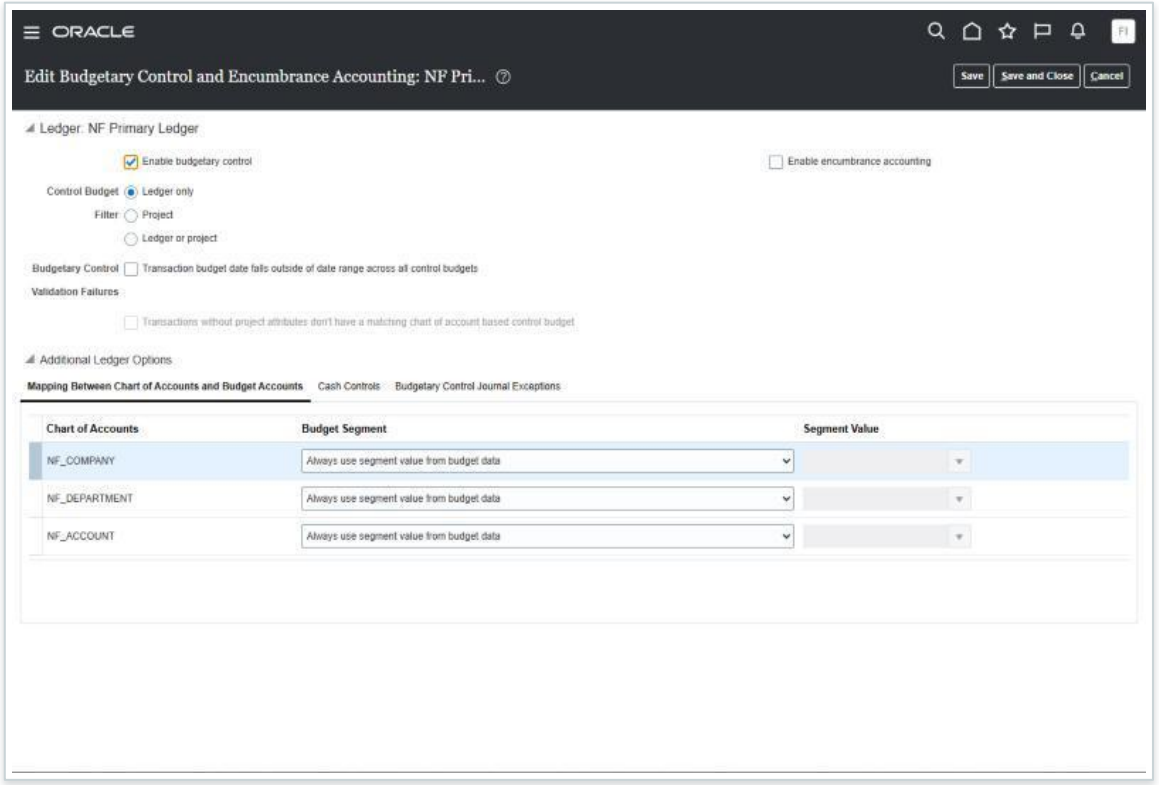

WHAT WE DID

Setup > Manage Business Unit > Create: NF Egypt Electronics BU, default reference data set COMMON, Active. Saved.

WHY IT MATTERS

Business units run the subledgers (payables, receivables, procurement). Budgetary control for purchases is enabled per business unit.

36. Manage Budgetary Control

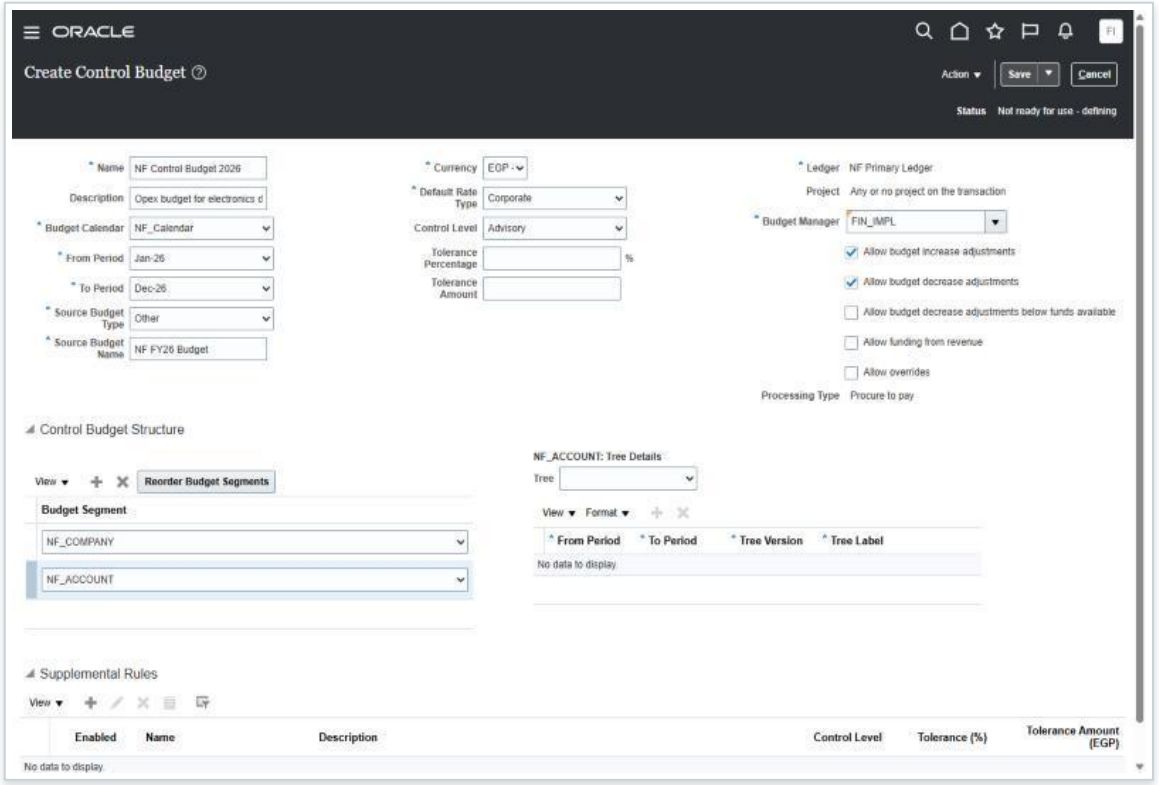

WHAT WE DID

Manage Budgetary Control and Encumbrance Accounting > NF Primary Ledger: Enable budgetary control, control budget filter Ledger only, each CoA segment maps to the same budget segment.

WHY IT MATTERS

Turns on funds checking for the ledger, so journals and purchases are compared against approved budgets before they are posted.

36. Manage Control Budget: NF Control Budget 2026

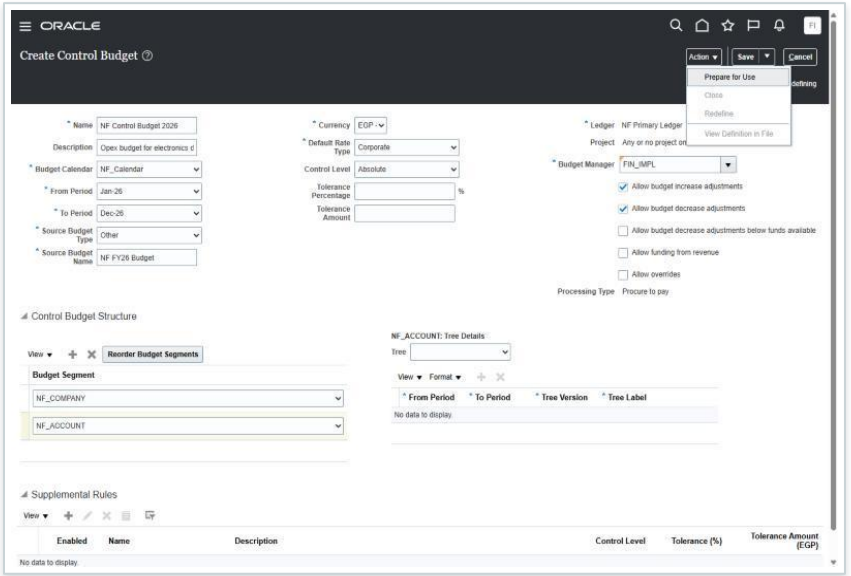

WHAT WE DID

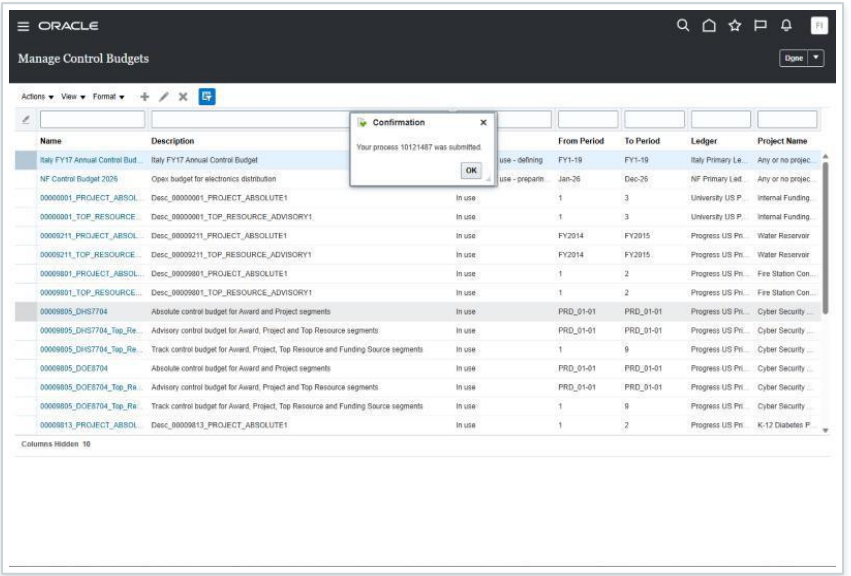

Manage Control Budgets > Create: NF_Calendar Jan-26 to Dec-26, source budget type Other (NF FY26 Budget), EGP, Corporate, control level Advisory, ledger NF Primary Ledger, budget segments NF_COMPANY + NF_ACCOUNT.

WHY IT MATTERS

The control budget defines what is controlled (company and account), for which periods, and how strictly.

36. Save, then Action > Prepare for Use

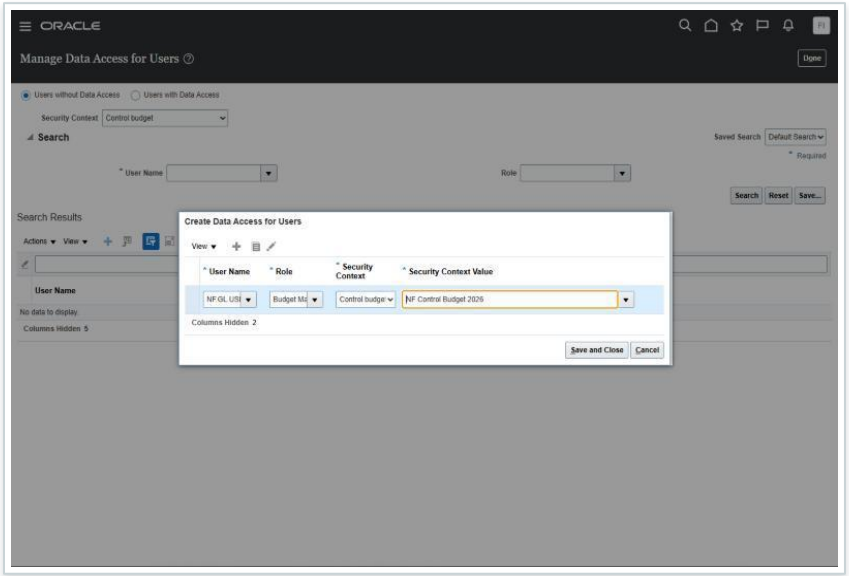

WHAT WE DID

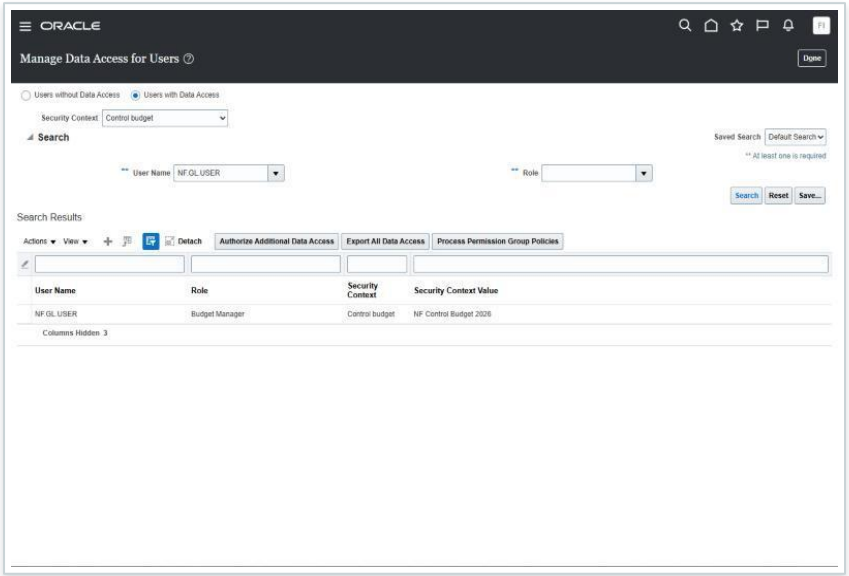

Saved the definition, then Action > Prepare for Use > Yes. Process 10121487 changed the status to In use.

WHY IT MATTERS

A control budget can't take budget amounts or check funds until it is prepared for use.

37. Control budget data access for users

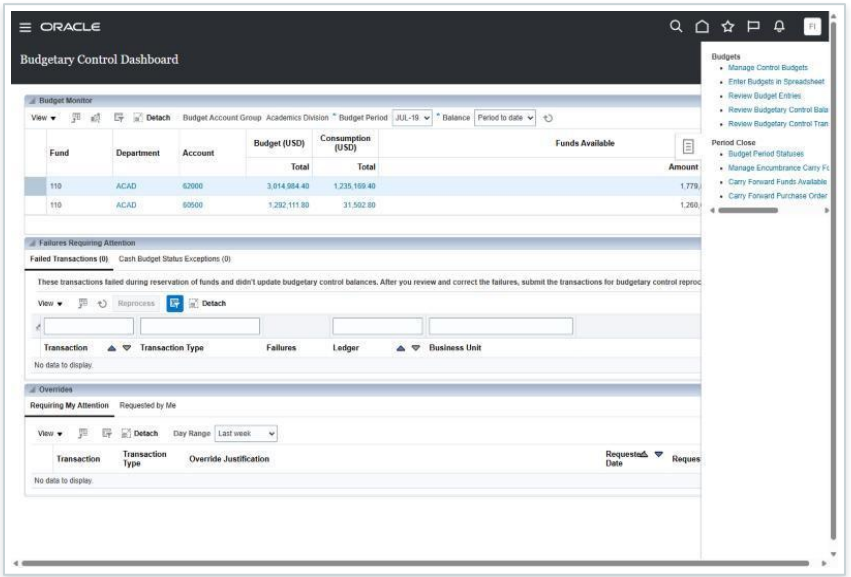

WHAT WE DID

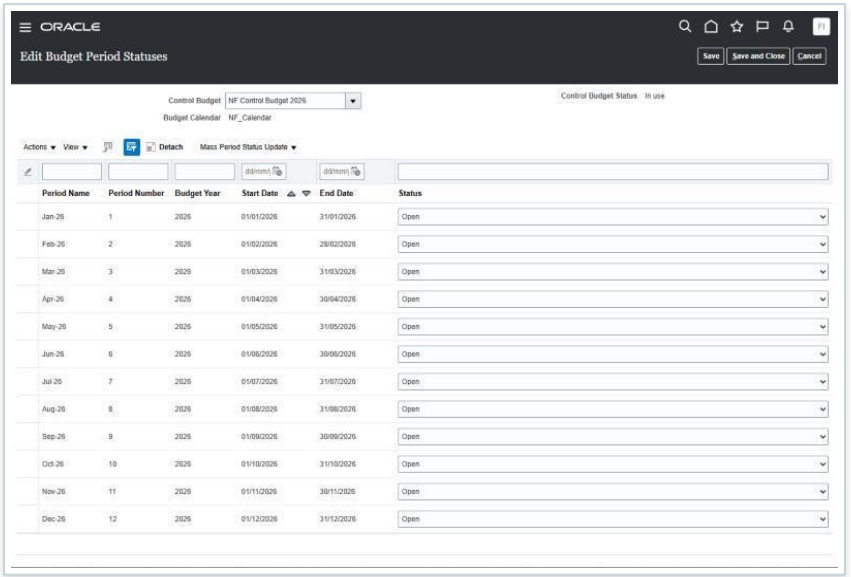

Manage Control Budget Data Access for Users: NF.GL.USER, role Budget Manager, security context Control budget, value NF Control Budget 2026.

WHY IT MATTERS

Like ledger data access: the role gives the screens, and this grant decides which budgets the user can see and change.

38. Manage budget period statuses

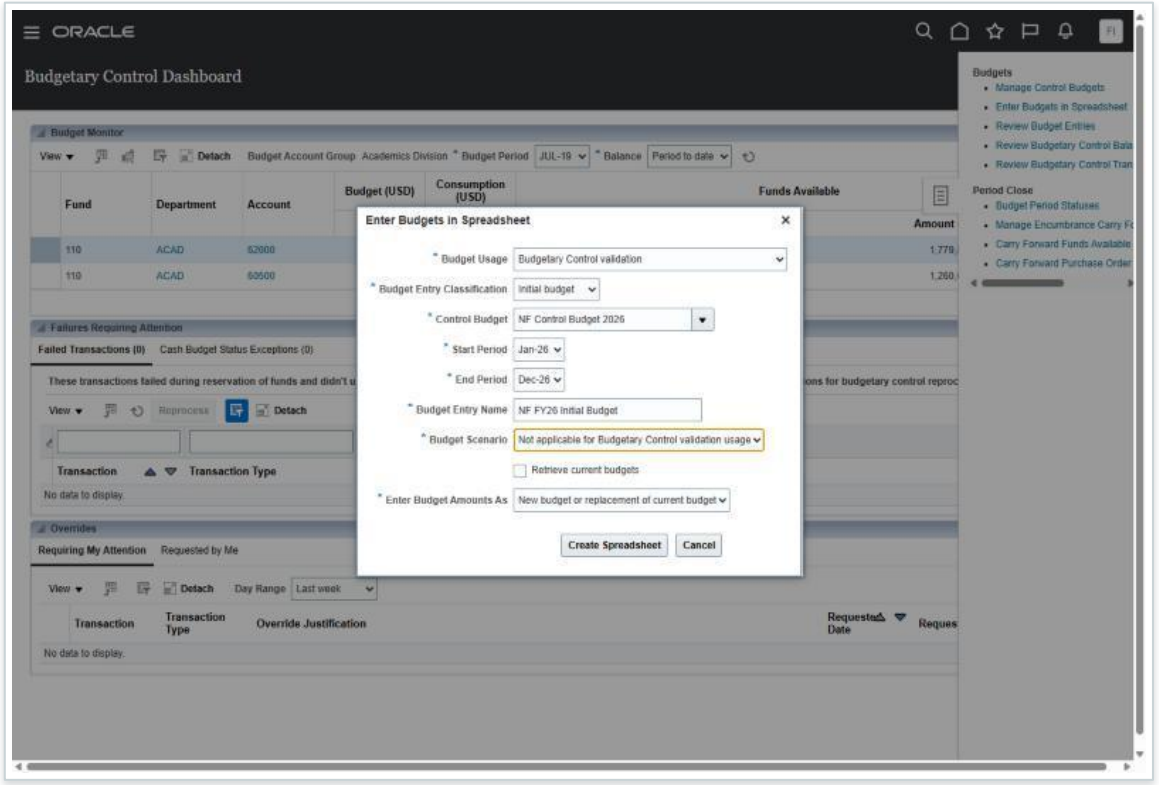

WHAT WE DID

Budgetary Control work area > Budget Period Statuses > NF Control Budget 2026 > Mass Period Status Update: all 2026 periods moved from Available for budgeting to Open.

WHY IT MATTERS

Budget can be entered in Available periods, but transactions only consume funds in Open periods.

39. Enter budgets in spreadsheet

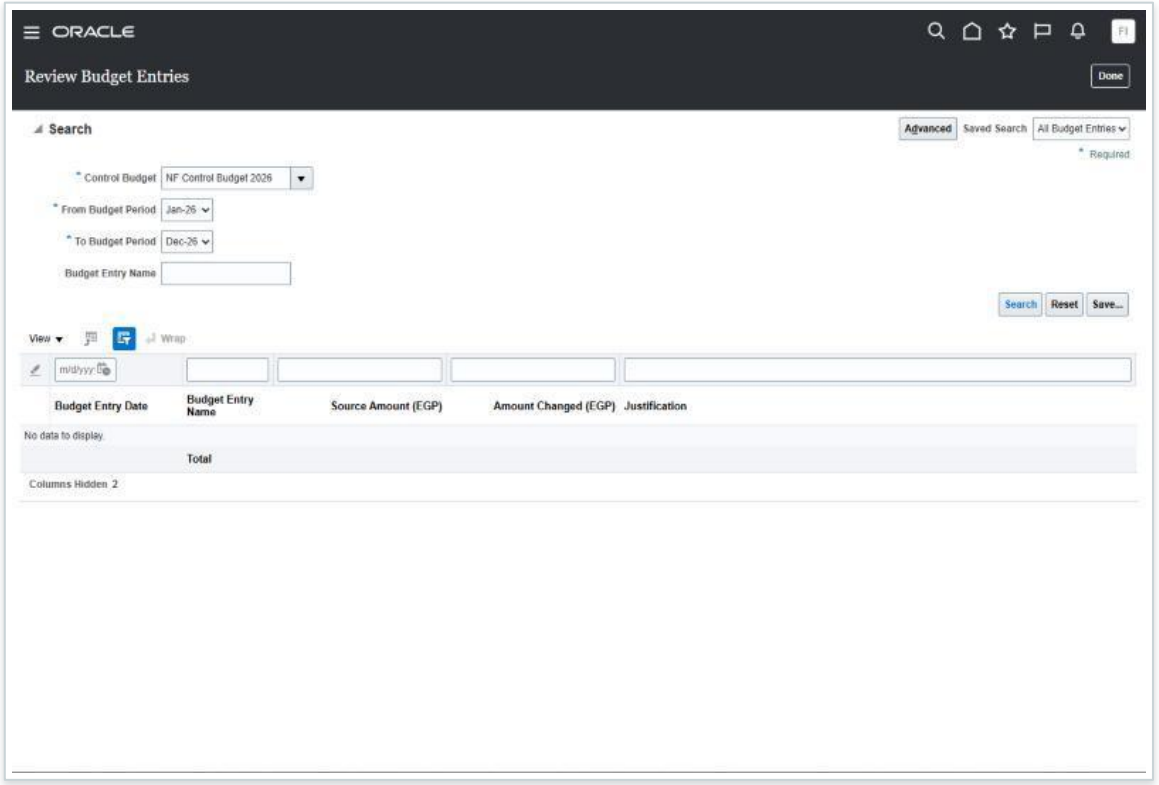

WHAT WE DID

Budgetary Control > Enter Budgets in Spreadsheet: usage Budgetary Control validation, Initial budget, NF Control Budget 2026, Jan-26 to Dec-26, entry name NF FY26 Initial Budget, New budget or replacement.

WHY IT MATTERS

Create Spreadsheet downloads an ADFdi workbook where amounts are typed per company, account and period, then submitted straight into budgetary control.

40. Review budget entries

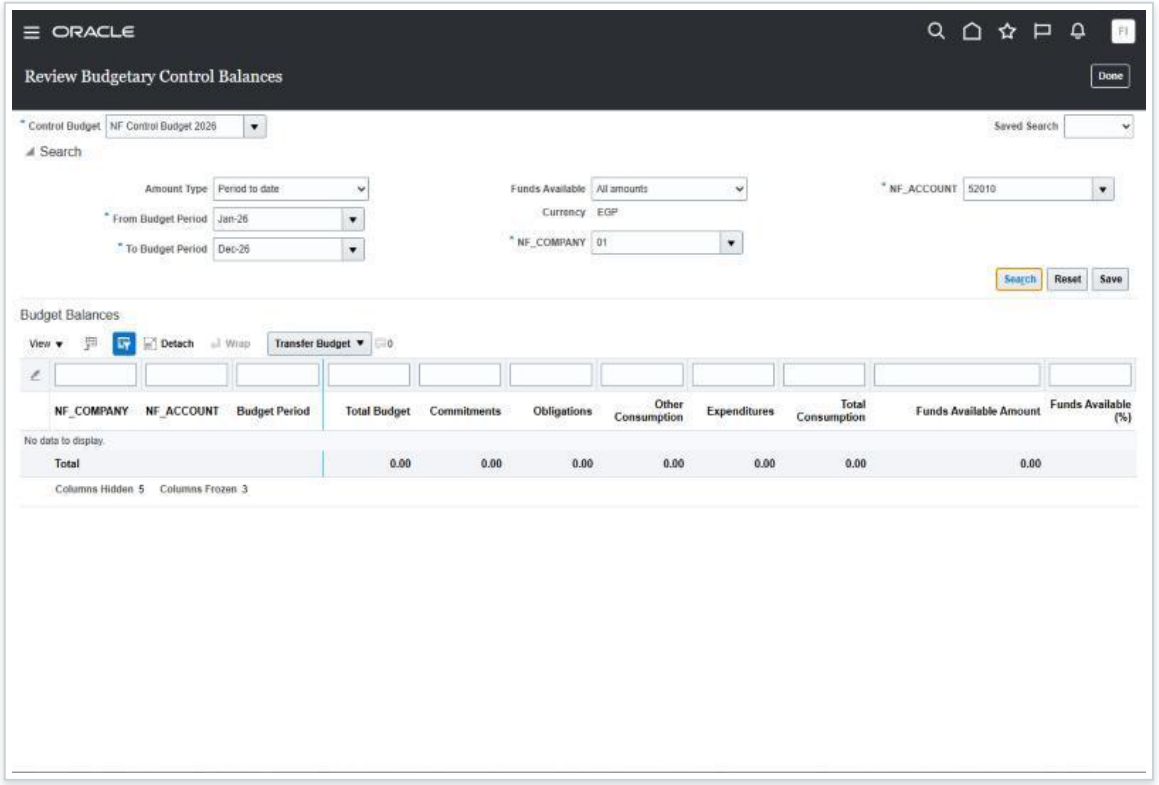

WHAT WE DID

Budgetary Control > Review Budget Entries: NF Control Budget 2026, Jan-26 to Dec-26.

WHY IT MATTERS

Lists every budget load and revision with its amount change and justification, which gives an audit trail of budget changes.

41. Review budgetary control balances

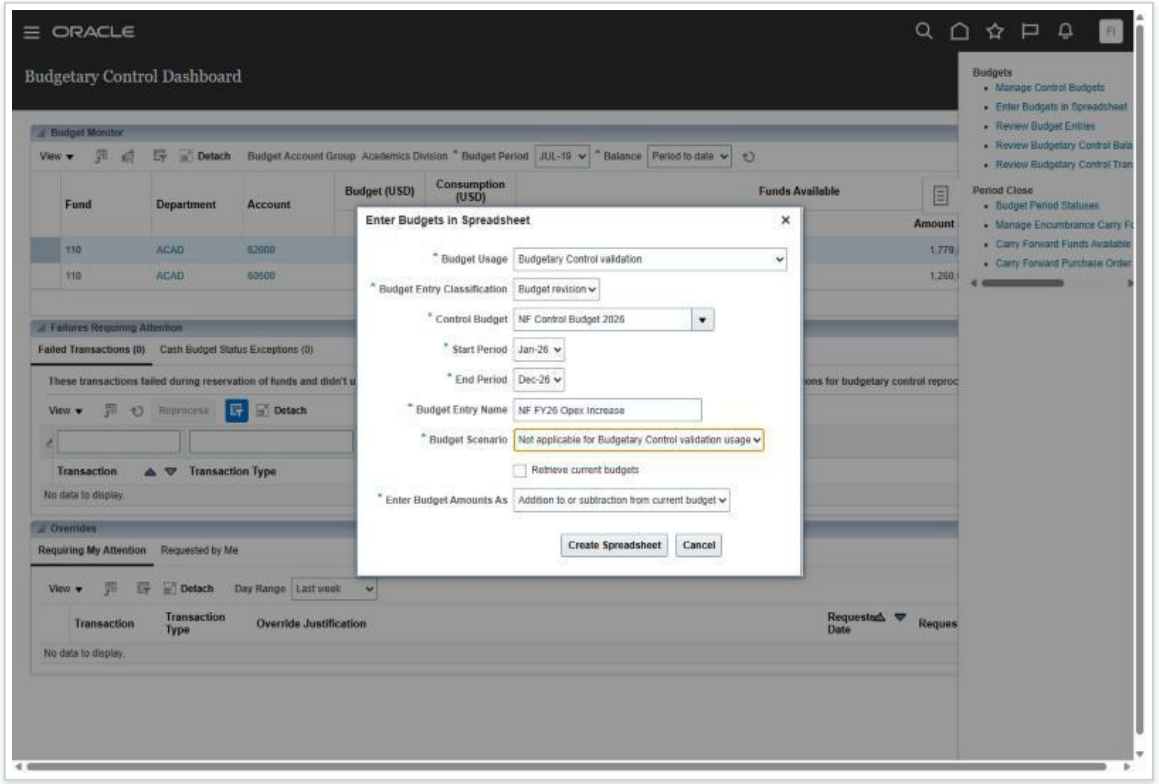

WHAT WE DID

Review Budgetary Control Balances: NF Control Budget 2026, company 01, account 52010 Opex, Jan-26 to Dec-26.

WHY IT MATTERS

Shows budget, commitments, obligations, expenditures and funds available, so managers can see how much is left to spend.

42. Budget increase

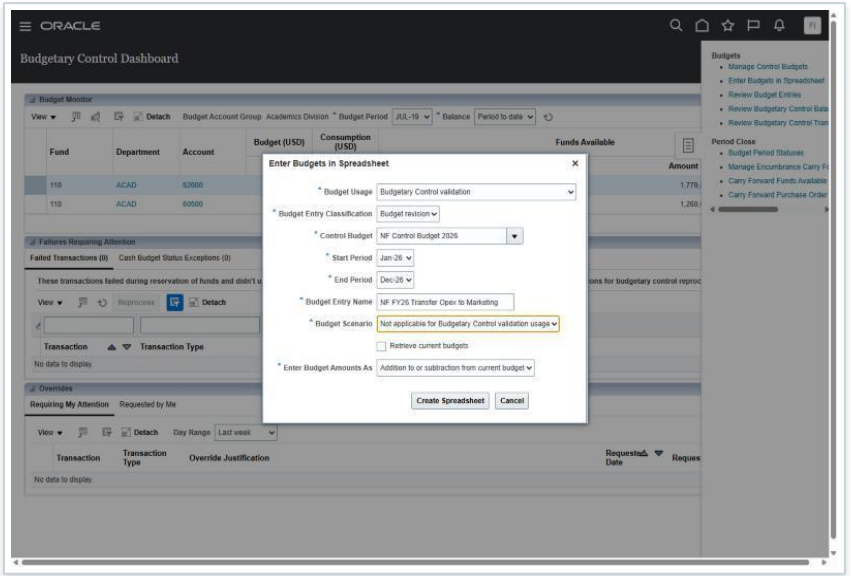

WHAT WE DID

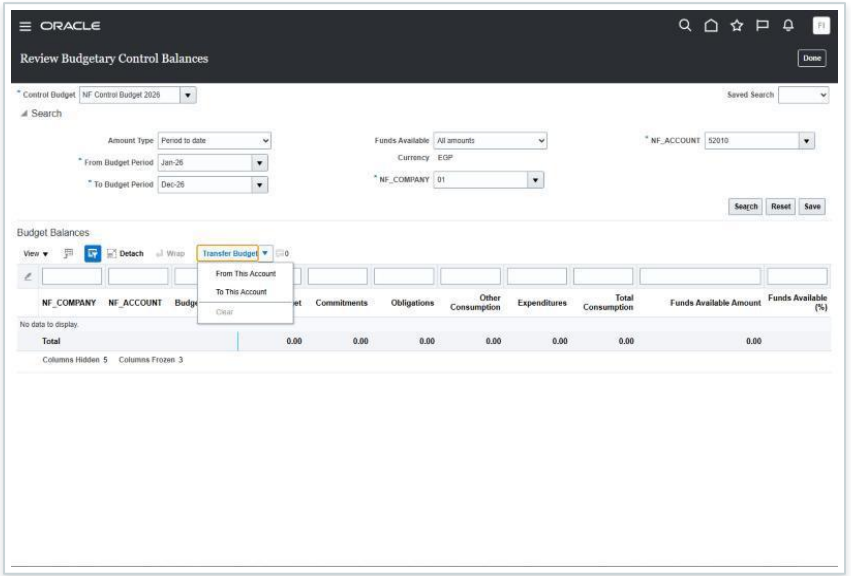

Enter Budgets in Spreadsheet: Budget revision, Addition to or subtraction from current budget, entry NF FY26 Opex Increase.

WHY IT MATTERS

An increase is a revision that adds to the current budget instead of replacing it, so the original load and the increase stay separately traceable.

43. Budget transfer

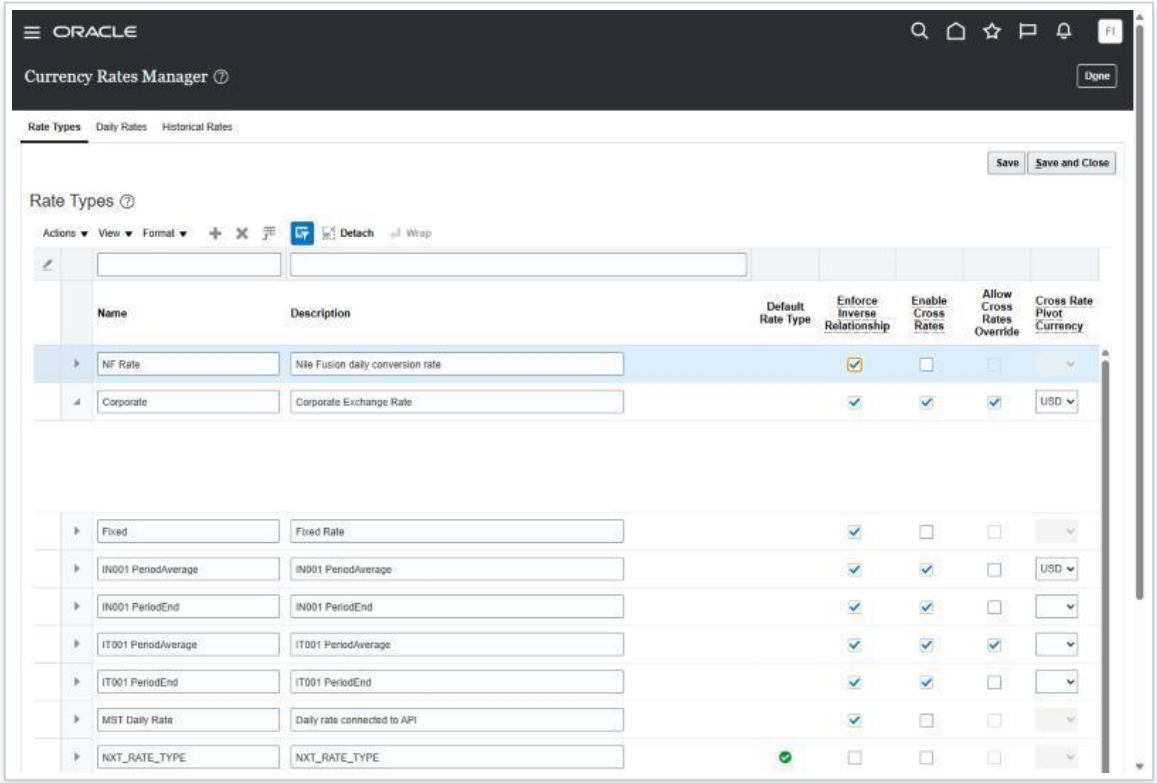

WHAT WE DID

Either a budget revision with a minus line and a plus line (NF FY26 Transfer Opex to Marketing), or Review Budgetary Control Balances > Transfer Budget > From This Account / To This Account.

WHY IT MATTERS

A transfer moves budget between accounts or companies without changing the total, for example from Cairo opex to Riyadh marketing.

44. Manage conversion rate types

WHAT WE DID

Currency Rates Manager > Rate Types: created NF Rate with Enforce Inverse Relationship.

WHY IT MATTERS

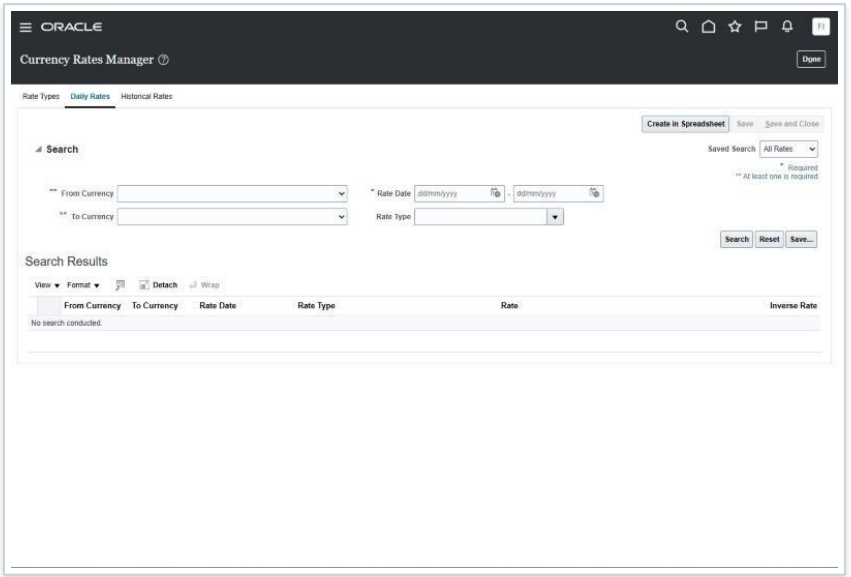

Rate types group exchange rates by purpose (corporate, spot, budget) so each process uses the right rate.

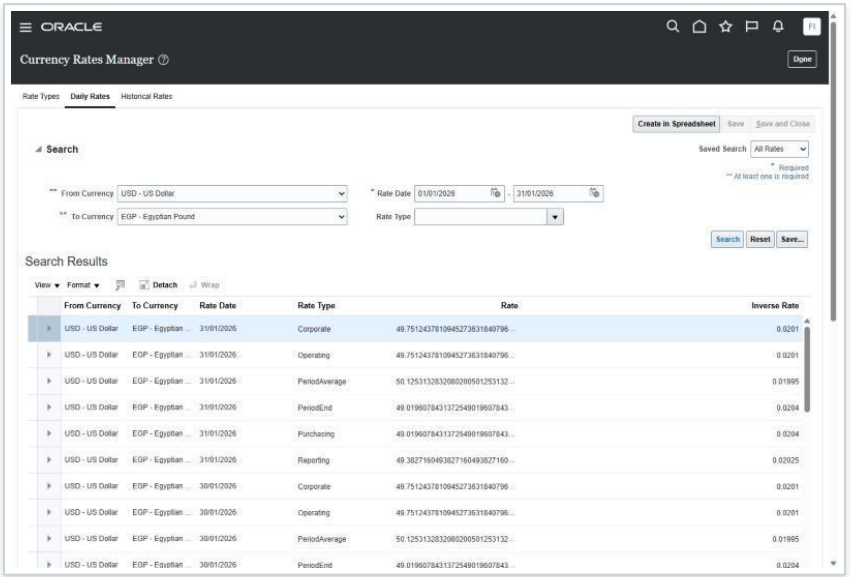

5

Foreign Currency, Intercompany and Close (Topics 45–55)

Daily rates, FX journal, revaluation, inquiry, translation, intercompany and period close

45. Manage daily rates

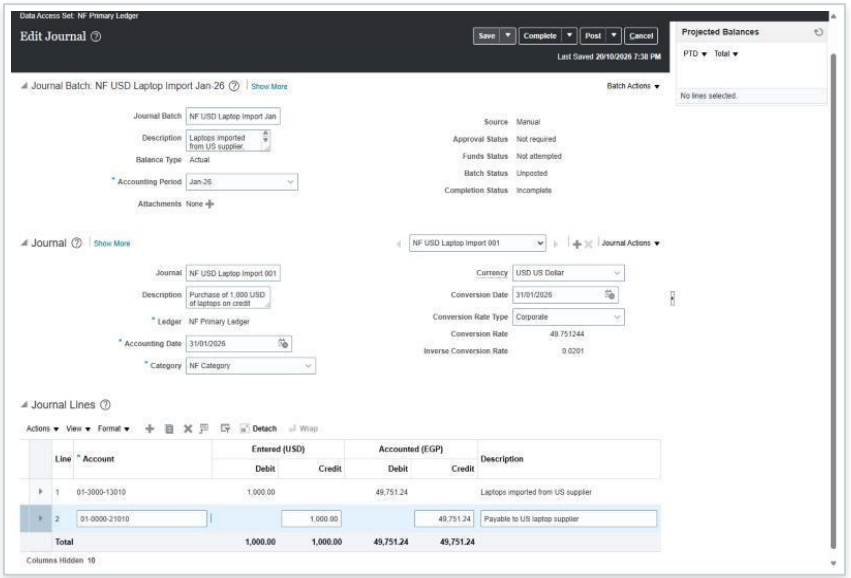

WHAT WE DID

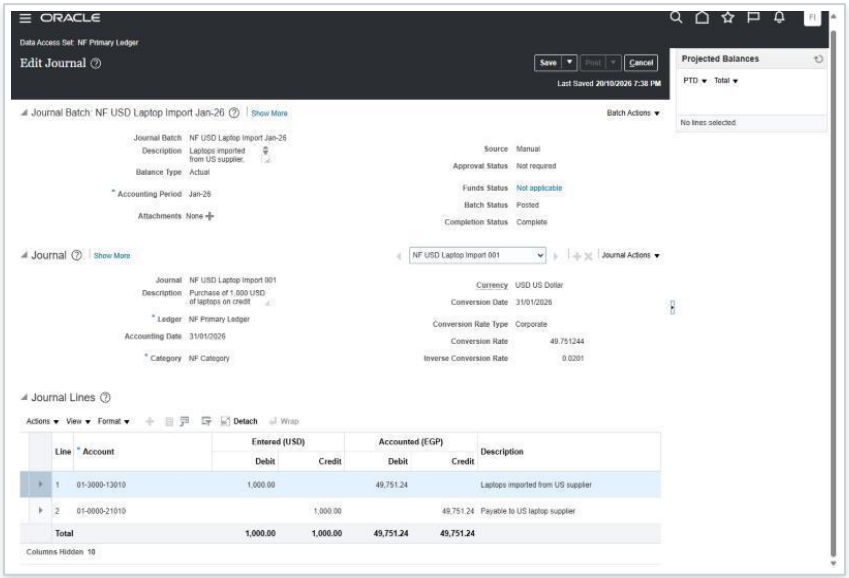

Daily Rates: rates are loaded with Create in Spreadsheet. The search shows USD → EGP Corporate rates for Jan-26 (about 49.75).

WHY IT MATTERS

Foreign currency journals, revaluation and translation all read these daily rates.

46. Foreign currency journal (USD)

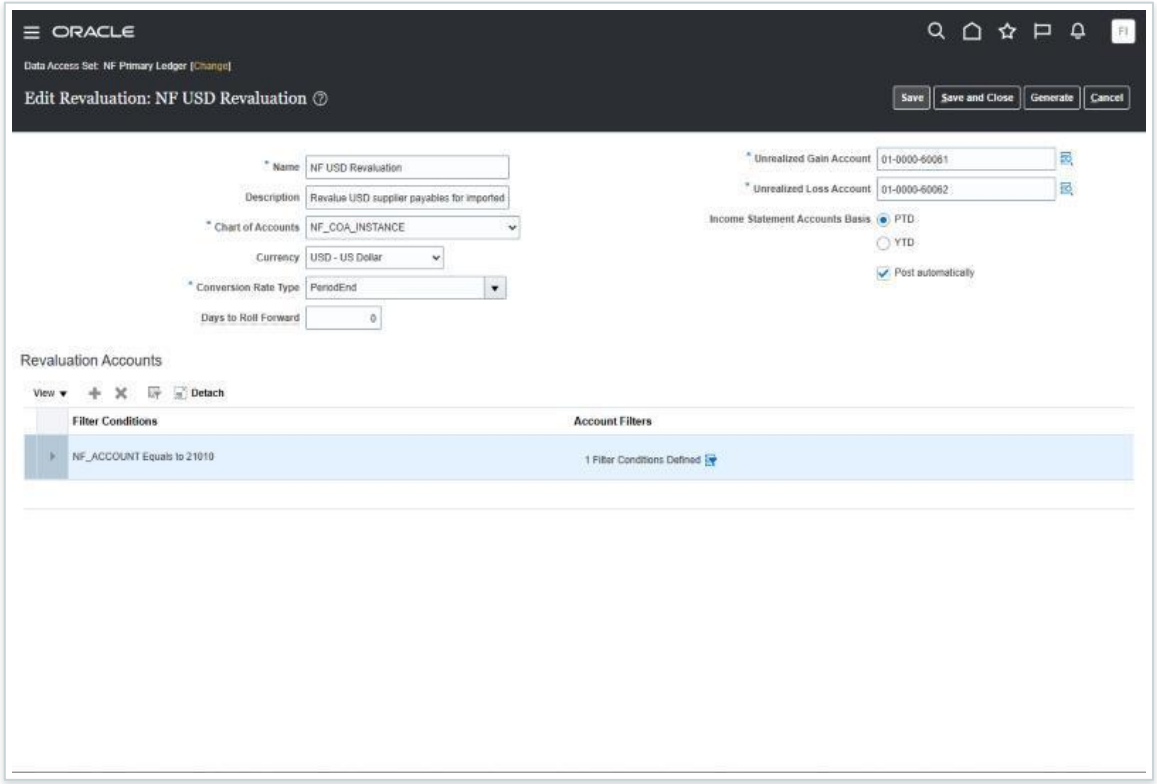

WHAT WE DID

Journal NF USD Laptop Import 001: currency USD, rate type Corporate (49.751244). Dr 01-3000-13010 Inventory 1,000 USD = 49,751.24 EGP, Cr 01-0000-21010 Suppliers Payable. Posted (process 10121421).

WHY IT MATTERS

Laptops are bought from US suppliers in USD. Fusion stores the entered USD and the accounted EGP amount using the daily rate.

47. Manage revaluations: definition

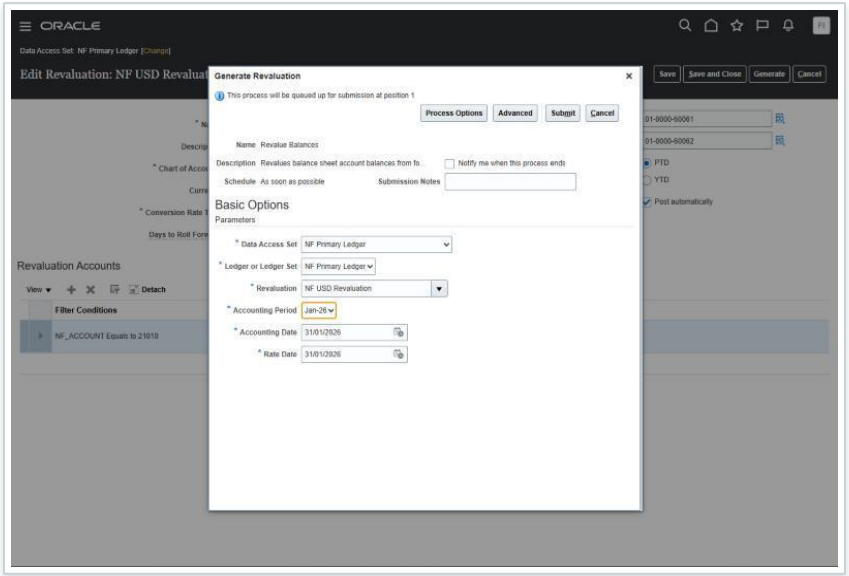

WHAT WE DID

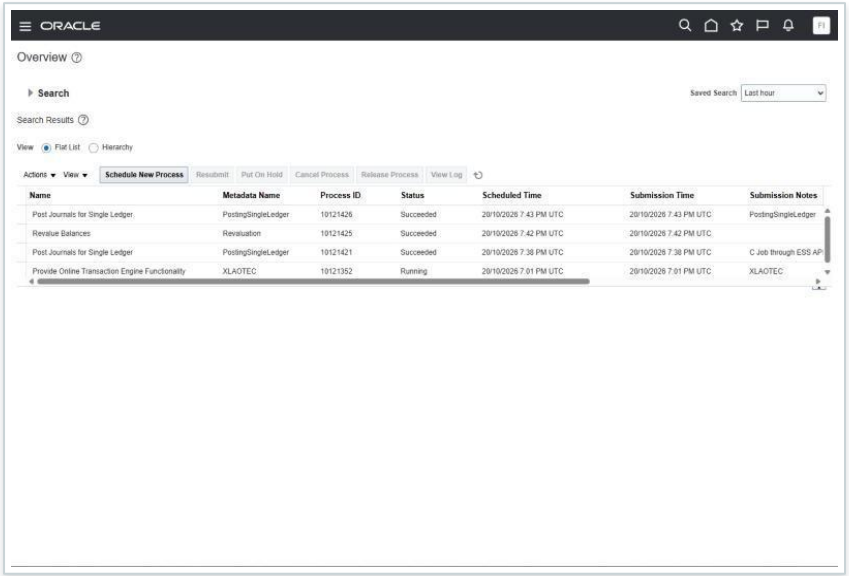

Period Close > Revalue Balances > Create: NF USD Revaluation, NF_COA_INSTANCE, USD, rate type PeriodEnd, gain 01-0000-60061, loss 01-0000-60062, account filter 21010, Post automatically.

WHY IT MATTERS

Open USD payables must be restated at the month-end rate. The difference is an unrealized FX gain or loss.

47. Generate revaluation

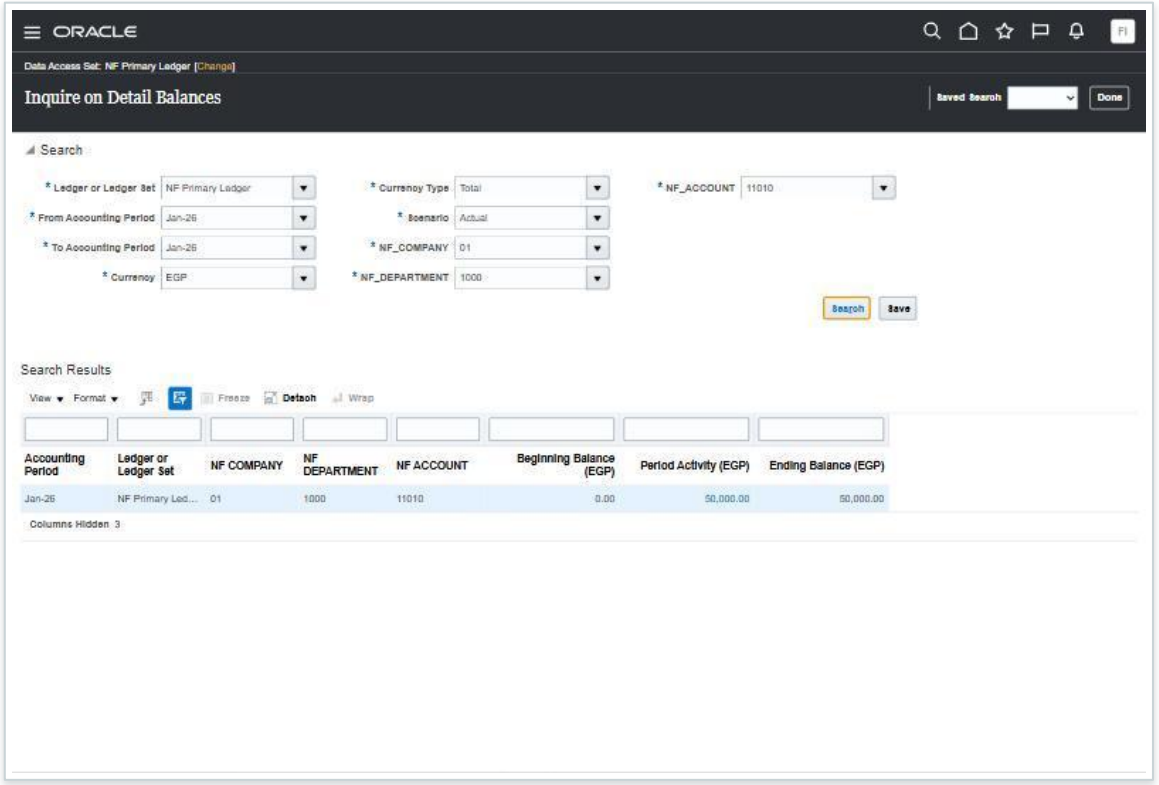

WHAT WE DID

Generate: NF Primary Ledger, Jan-26, accounting and rate date 31/01/2026. Revalue Balances (10121425) and the automatic Post Journals (10121426) both succeeded.

WHY IT MATTERS

The revaluation journal is created and posted in one go, so the balance sheet shows USD balances at the closing rate.

48. Inquire on detail balances

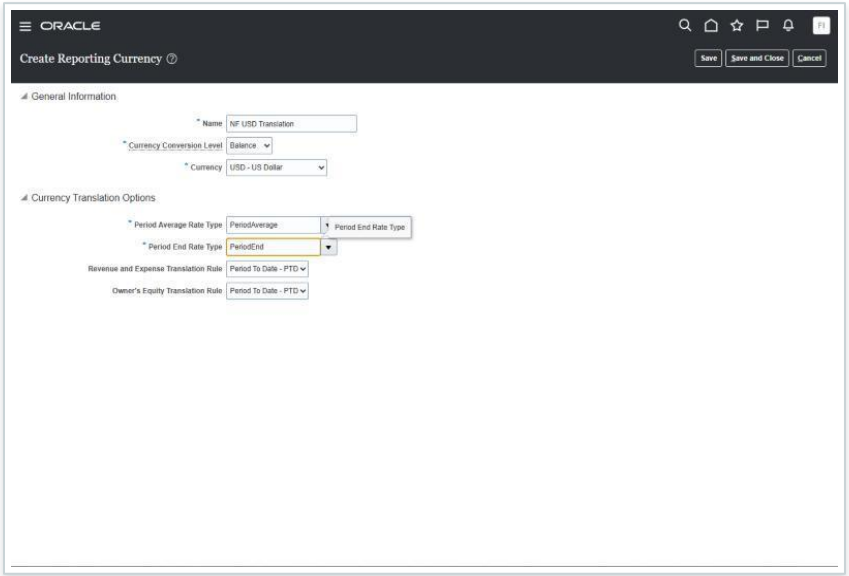

WHAT WE DID

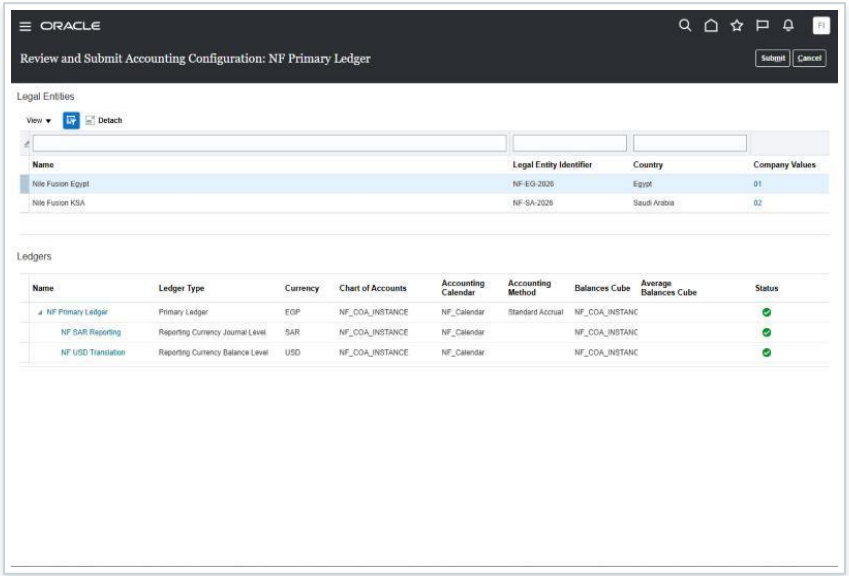

Period Close > Inquire on Detail Balances: NF Primary Ledger, Jan-26, 01-1000-11010. Period activity and ending balance are 50,000 EGP.

WHY IT MATTERS

Confirms the posted journal hit the right account, and lets you drill down to journal lines.

49. Reporting currency: translation (balance level)

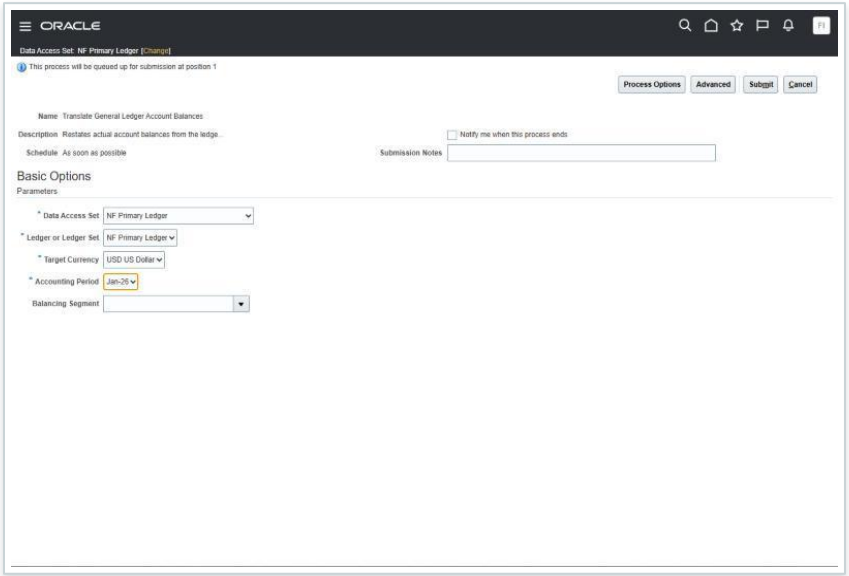

WHAT WE DID

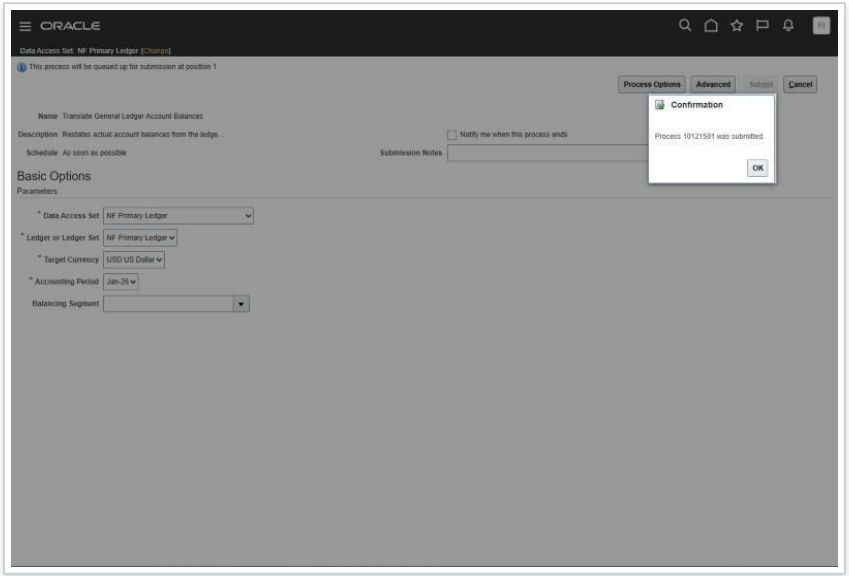

Manage Reporting Currencies > Create: NF USD Translation, conversion level Balance, USD, PeriodAverage and PeriodEnd rate types. Then Review and Submit Accounting Configuration (process 10121444).

WHY IT MATTERS

A balance-level reporting currency holds translated balances, for example USD statements for a group or lender, without converting each journal.

50. Translate balances

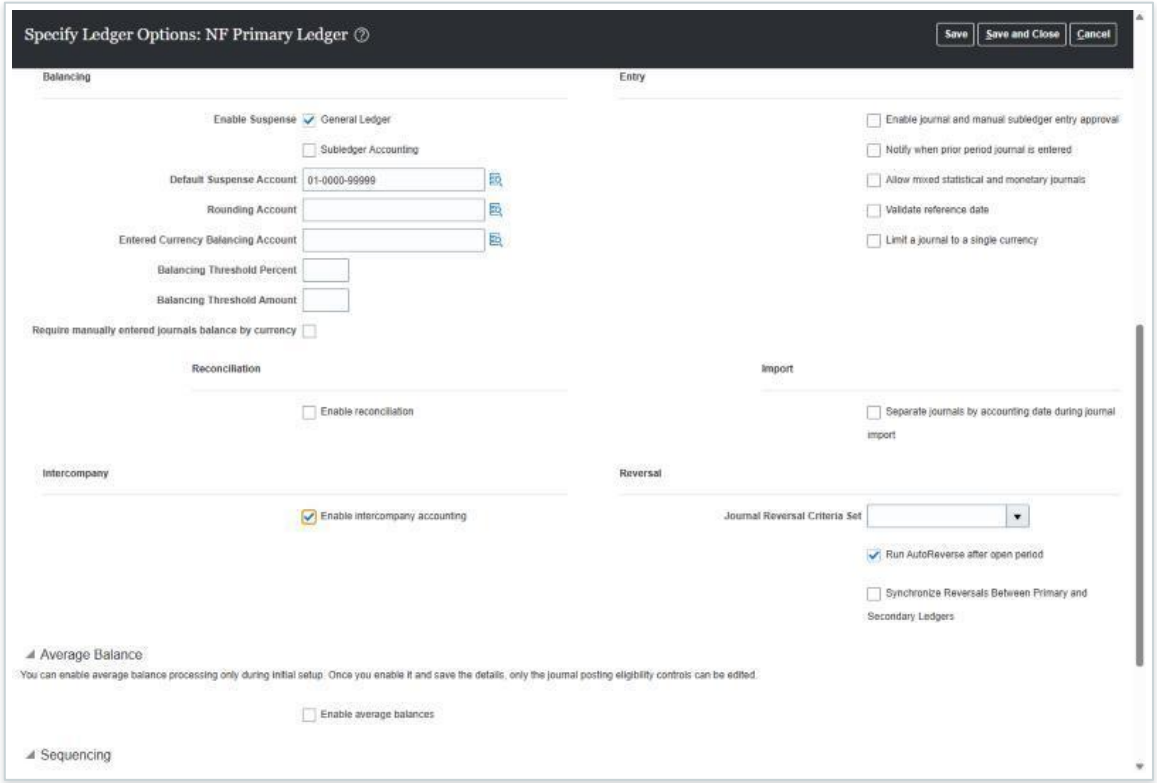

WHAT WE DID

Period Close > Translate Balances: NF Primary Ledger, target USD, Jan-26. Process 10121501 submitted.

WHY IT MATTERS

Translation restates balance sheet accounts at the period-end rate and P&L at the average rate. The difference goes to CTA 31030.

51. Enable intercompany

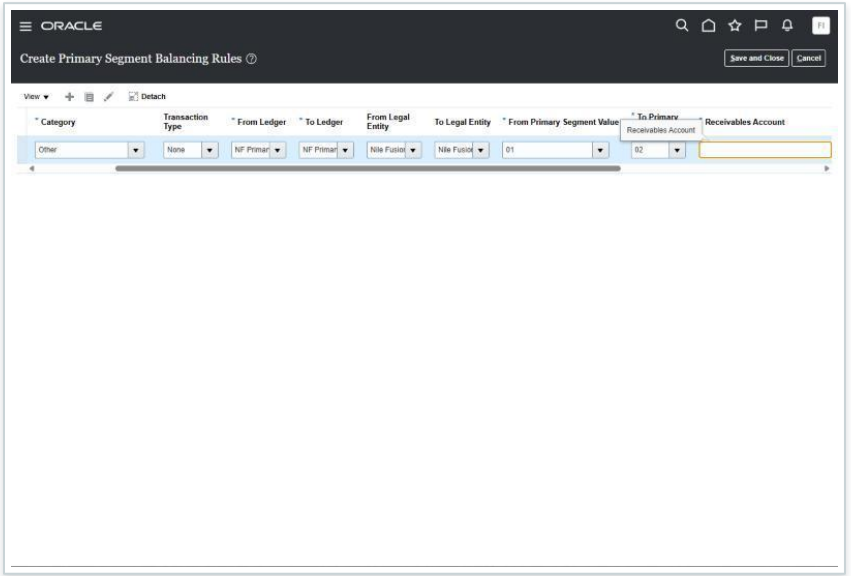

WHAT WE DID

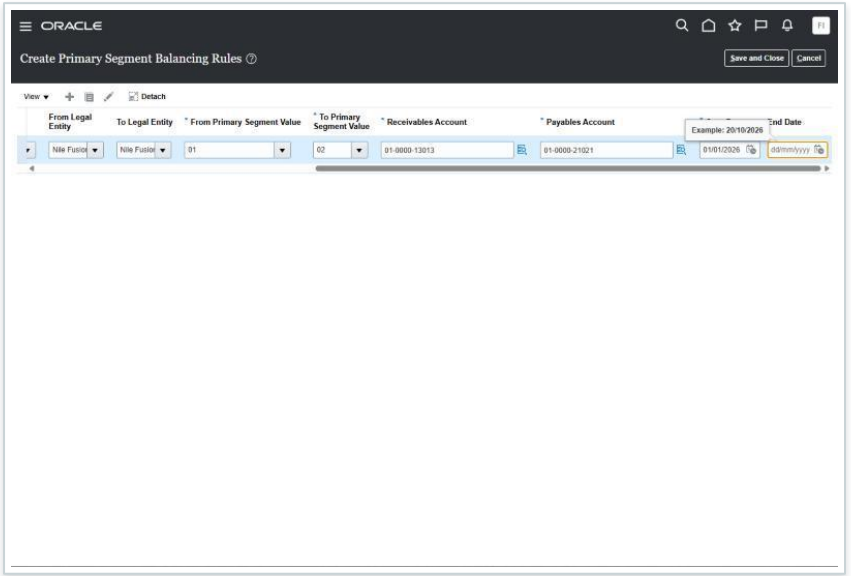

Specify Ledger Options: Enable Intercompany Accounting checked.

WHY IT MATTERS

Required before intercompany balancing rules take effect on journals that use two companies.

52. Define balancing rule: Egypt 01 to KSA 02

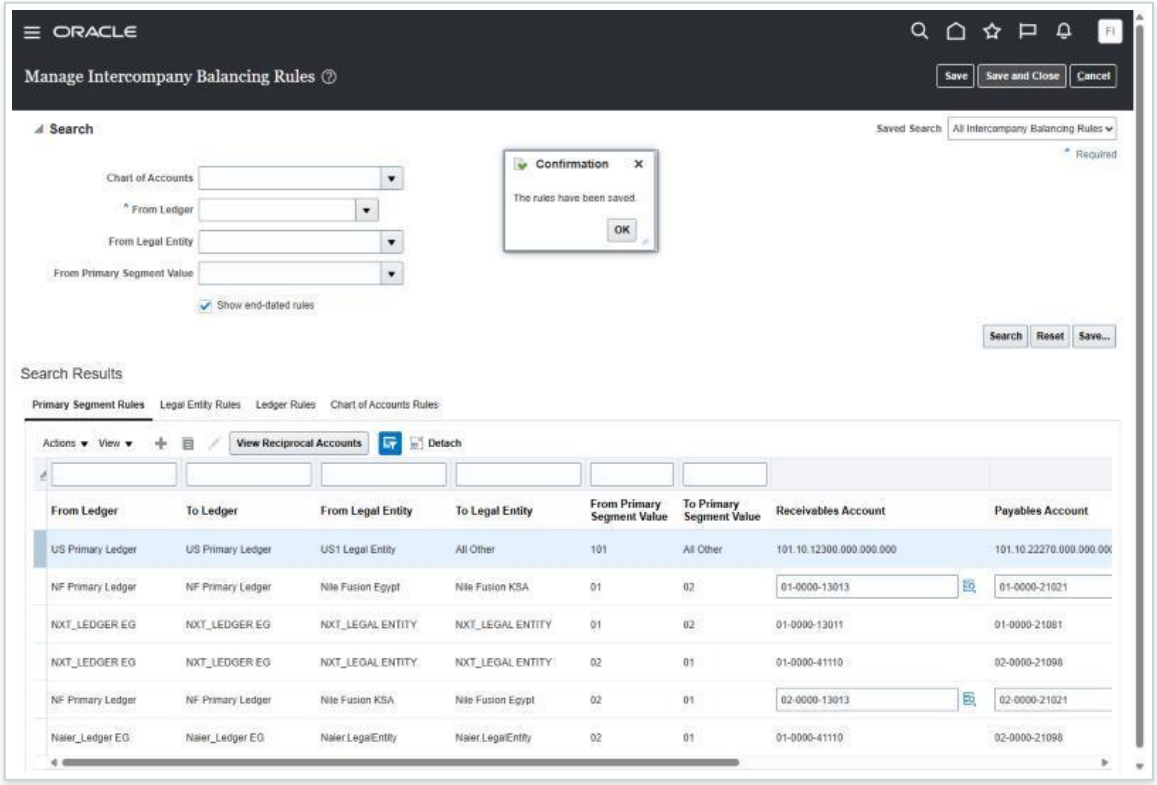

WHAT WE DID

Primary segment rule: source Other, category Other, NF Primary Ledger, Egypt (01) → KSA (02). Receivables 01-0000-13013 and payables 01-0000-21021.

WHY IT MATTERS

When Cairo ships devices to the Riyadh branch in one journal, Fusion adds the intercompany receivable/payable lines so each company balances.

52. Balancing rules saved: both directions

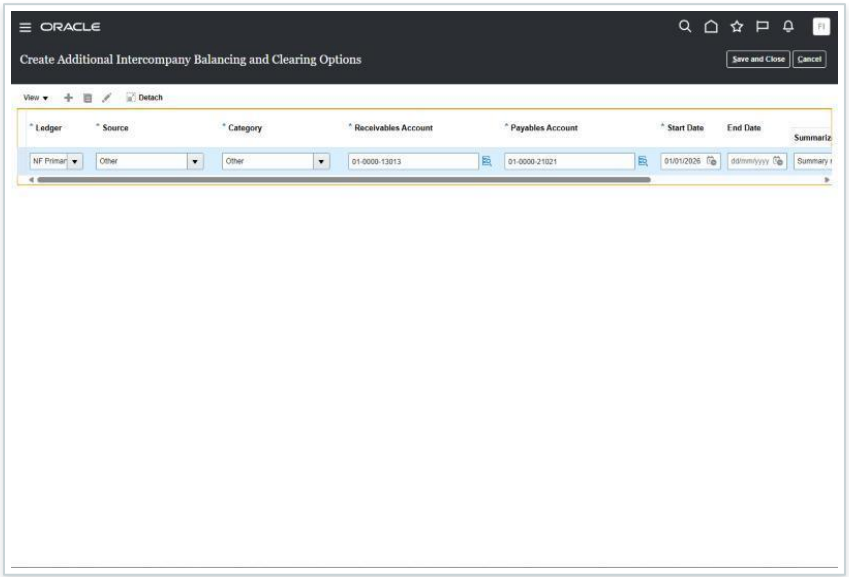

WHAT WE DID

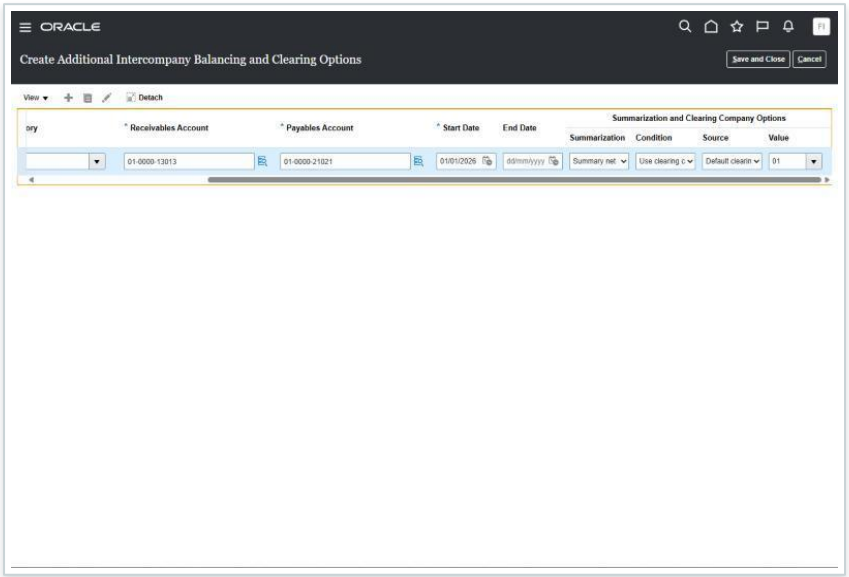

Added the reverse rule KSA (02) → Egypt (01) with 02-0000-13013 and 02-0000-21021.

WHY IT MATTERS

Rules are directional, so both directions are needed for any journal between the two companies.

53. Additional intercompany balancing and clearing options

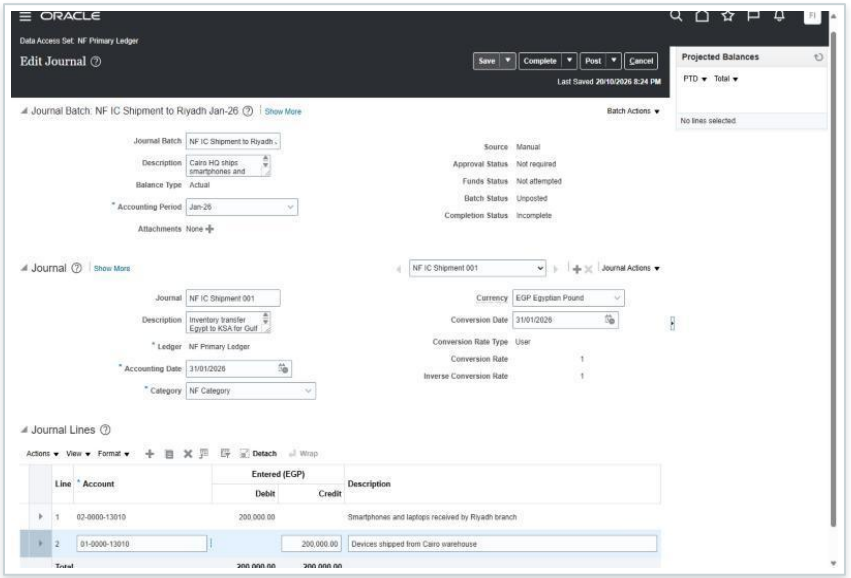

WHAT WE DID

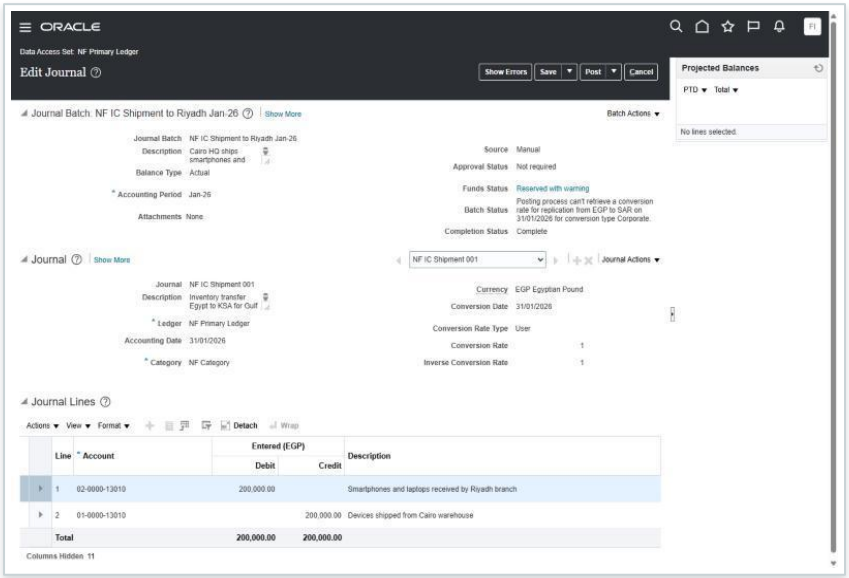

Manage Additional Intercompany Balancing and Clearing Options: NF Primary Ledger, source Other, category Other, receivables 01-0000-13013, payables 01-0000-21021, from 01/01/2026, Summary net, use clearing company for all many-to-many journals, default clearing company 01.

WHY IT MATTERS

Handles journals with many companies on both sides by routing them through a clearing company (Cairo HQ) and netting the intercompany lines.

Intercompany journal: Cairo ships devices to Riyadh

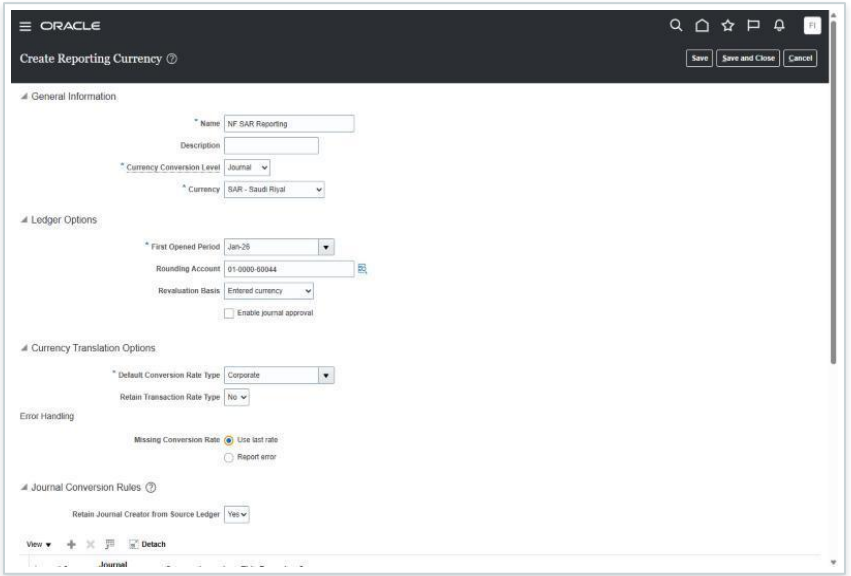

WHAT WE DID

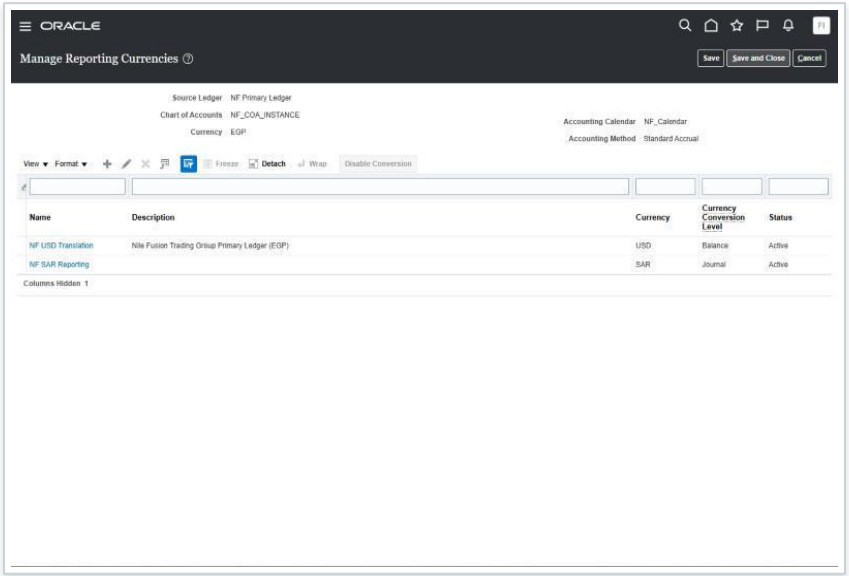

Journal NF IC Shipment 001 (EGP): Dr 02-0000-13010 Inventory Riyadh 200,000, Cr 01-0000-13010 Inventory Cairo 200,000. Funds check: Reserved with warning (advisory budget).

WHY IT MATTERS

One journal across two companies. When posted, the balancing rules add 13013 receivable / 21021 payable lines so each company balances.

54. Reporting currency: journal level (SAR)

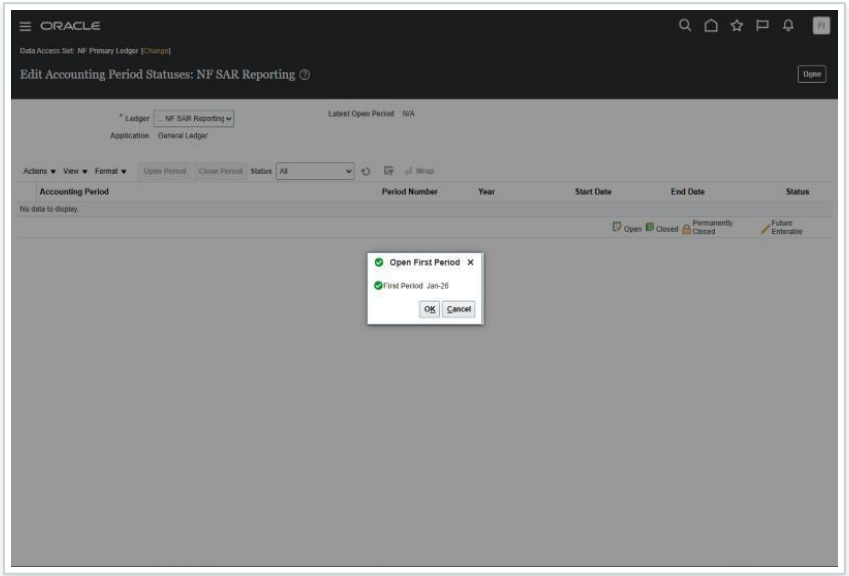

WHAT WE DID

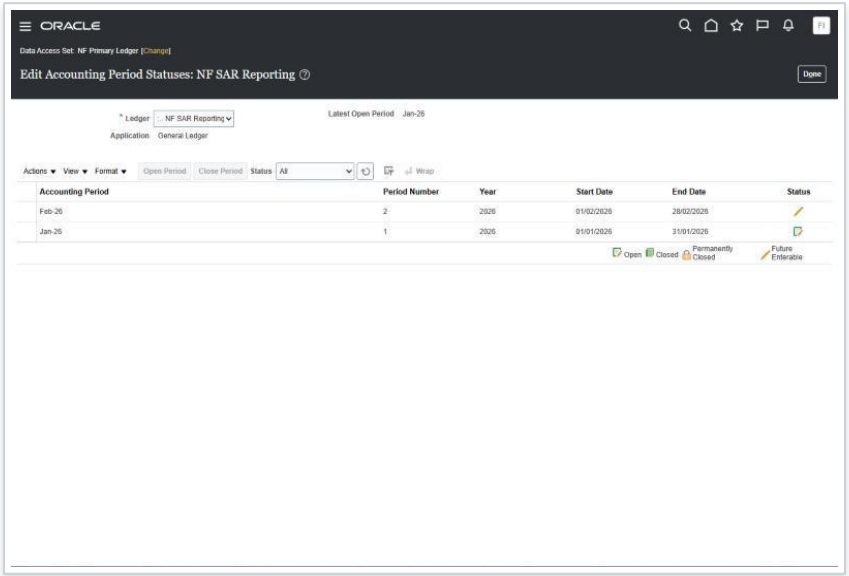

Manage Reporting Currencies > Create: NF SAR Reporting, conversion level Journal, SAR, first period Jan-26, rounding 01-0000-60044, Corporate, use last rate within 365 days.

WHY IT MATTERS

Every journal posted in EGP is converted and posted again in SAR, which gives the Riyadh branch and Saudi reporting a full SAR ledger.

54. Open the first period in the SAR ledger

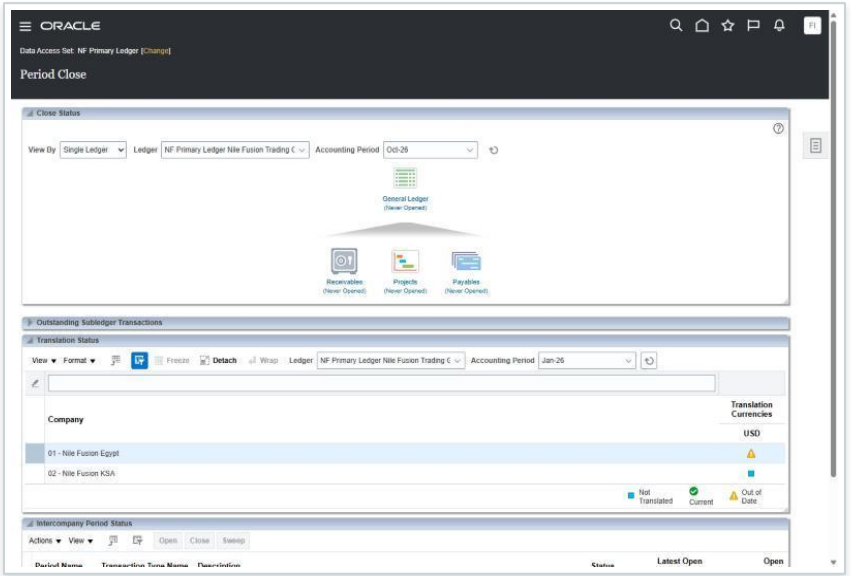

WHAT WE DID

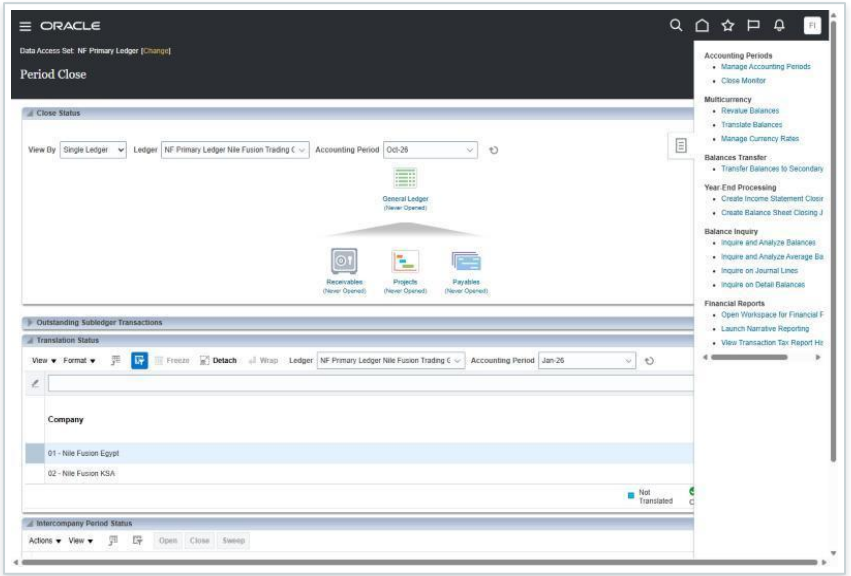

Manage Accounting Periods > NF SAR Reporting > Open First Period Jan-26 (process 10121512). Jan-26 is Open and Feb-26 is Future Enterable.

WHY IT MATTERS

Journal-level reporting ledgers have their own period statuses. Primary journals can't post until the matching reporting period is open.

55. Close periods: translation status

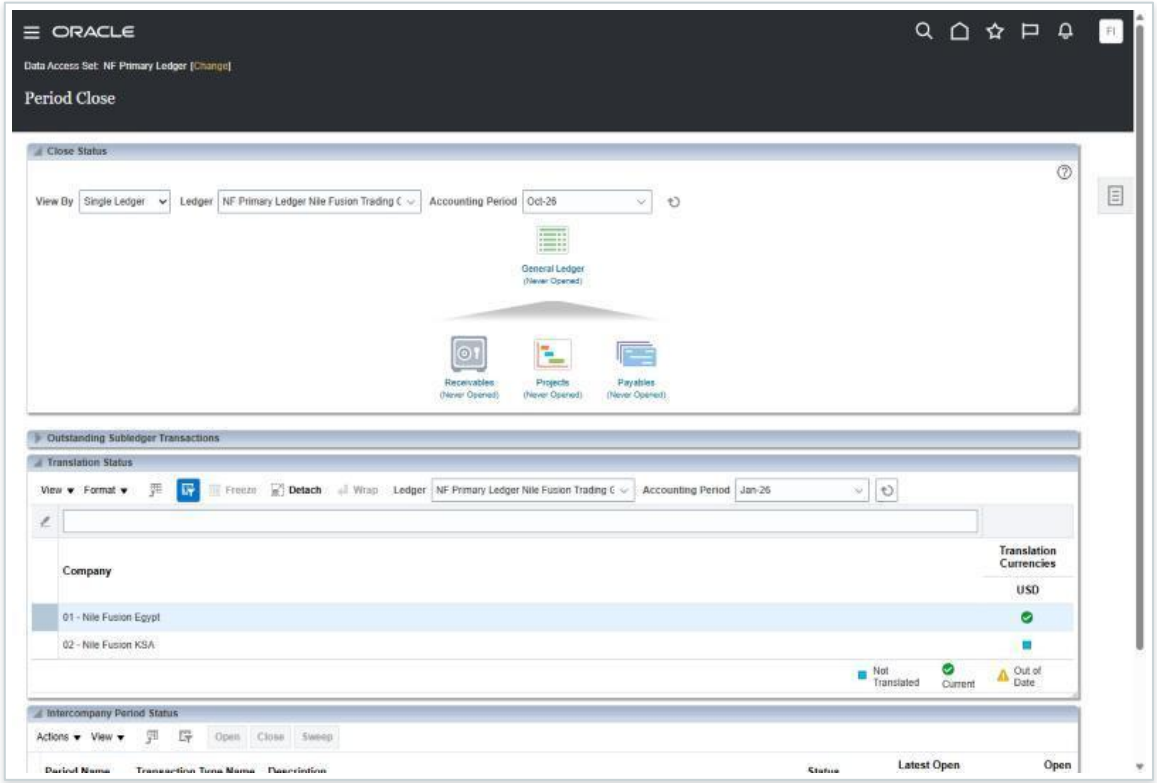

WHAT WE DID

Period Close work area: the Translation Status for Jan-26 showed Out of Date for company 01 after the reversal was posted. The Tasks panel is the close task list: periods, revaluation, translation, closing journals and balance inquiry.

WHY IT MATTERS

The close dashboard shows which steps still need running before the period can be closed.

55. Close periods: task list > Translate balances

WHAT WE DID

From the task list we ran Translate Balances again for Jan-26. Translation Status for 01 Nile Fusion Egypt changed to Current.

WHY IT MATTERS

Translation is re-run as the last close step, so the USD figures include every journal posted in the period. The period is then ready to close.

NF

Thank you

From an empty instance to a controlled, budgeted, multi-currency ledger for Cairo and Riyadh

Questions and live demo
